AWS Certificate Manager Pricing

AWS Certificate Manager (ACM) makes it easy for you to centrally manage your SSL/TLS certificates. By default, ACM issues certificates that can only be used with [services integrated with ACM](#) are issued at no cost to you.

If you issue an exportable public certificate, there is a charge at certificate issuance and again when the certificate renews. You can use exportable public certificates with integrated AWS services and export them for use with any workloads that require TLS certificates. You can call the *export-certificate* API or use the AWS Management Console to export the public certificate and get access to the private keys of the certificate. The first 10,000 API calls are available at no additional charge. Subsequent 10,000 API call increments are charged per account per month.

ACM has plans to provide shorter validity lifetimes for public certificates to align with the upcoming 2026 - 2029 Certificate Authority/Browser Forum (CA/Browser Forum) schedule of reducing TLS certificate validity periods. As industry standards change, we plan to adjust our pricing structure accordingly, aiming to keep the annual cost for certificates in line with current rates.

If you manage AWS Private Certificate Authority (Private CA) through ACM, refer to the [AWS Private CA Pricing page](#) for more details and examples.

Public certificate pricing

Certificate options	Price
Non-exportable public certificate	No additional cost
Exportable public certificate (Per standard fully qualified domain name)	\$15 (upon issuance and again only on certificate renewal)
Exportable public certificate (Per wildcard name)	\$149 (upon issuance and again only on certificate renewal)
First 10K API calls of export-certificate	\$0 (per account per month)
Next 10,000 API calls of export-certificate	\$0.50 for each 10k API calls (per account per month)

NOTE: At the end of a monthly billing period, or when you incur a one-time fee, AWS issues an invoice as a PDF file. If you're paying by credit card, AWS also charges the credit card that you have on file at this time. To download invoices and view your monthly charge details, you can use the Bills page in the AWS Billing and Cost Management console
