

Managed **Azure** **Virtual Desktop**

Our Managed Azure Virtual Desktop (AVD) Service keeps your AVD environment managed, optimised, secure, and your users working productively from anywhere.

Our Managed Azure Virtual Desktop service

Phoenix are one of a small number of Microsoft partners with the Microsoft Azure Expert MSP certification and years of experience in deploying, optimising and managing AVD. Many organisations find that implementing and configuring AVD requires technical expertise with knowledge of Azure, PowerShell, and networking requirements, as well as image management and app deployment expertise.

Why choose Azure Virtual Desktop?

Delivering domain-joined Windows desktops directly to your users from Azure brings many benefits, with many organisations enjoying the flexibility and improved remote working capabilities this brings to their operations:

- ▶ **Deliver Windows 11 and 10 virtually anywhere:** provide a best-in-class work experience for your employees through Windows 11, 10, and Microsoft 365 virtualised workspaces
- ▶ **Built-in security features:** security is a key component for virtual workspaces and proactive management of its security components is essential for your organisation to keep your applications and data secure and maintain compliance
- ▶ **Rapid deployment and scalability:** adopting a cloud hosted virtualised desktop solution that is quick to deploy and enables your organisation to easily scale to meet demand
- ▶ **Utilise existing licenses to reduce cost:** apply any eligible licence entitlements you already have to your Azure Virtual Desktop infrastructure and only pay for the devices you're using

Through Azure Virtual Desktop (AVD), Microsoft provide the building blocks for organisations to run desktops on Azure, but it is the organisation's responsibility to build, maintain and secure their desktop environments.

Our Managed Azure Virtual Desktop Service provides a low-cost solution to ensure that your AVD environment is always correctly configured, optimised, and is operated cost-effectively.

Gaining access to our AVD dashboards enables you to check your users are connected and that you are running to budget. Additionally, our specialists proactively monitor your production environment to ensure it continues to operate correctly, including key configuration such as auto-scaling to ensure your AVD environment is always cost-optimised for both peak and off-peak operations.

Benefits of our Managed Azure Virtual Desktop service

**24/7 Azure AVD
technical support**

**Azure Virtual Desktop
best practice
configuration**

**Azure Virtual Desktop
session host patching**

**Azure Virtual Desktop
platform monitoring**

**Regular technical
reviews for your AVD
environment**

**Implementation of
security recommendations
by Azure Specialists**
