Full disk encryption, simply and seamlessly

Central Device Encryption from Sophos provides centrally-managed, full disk encryption using Windows BitLocker and Mac FileVault. It takes advantage of the technology that is built into the operating systems you use. You'll be able to seamlessly manage keys and recovery functions, further simplify your workflow when you manage full disk encryption for Windows and macOS through Sophos Central.

With Sophos, encrypting, decrypting, and accessing information is automatic and transparent for the end user, so keeping data safe won't get in the way of regular work practices.

Sophos full disk encryption includes:

Business As Usual

Open an encrypted file, edit it, or share it internally as you would any other file – no disruption to your end users' workflows.

External Sharing

Create passwords with just a click for files you want to share outside your organization for safe collaboration.

Cross Platform Access

Encrypt a file on a Mac and open it in Windows or vice versa – Sophos encryption works with all devices.

Manage whole disk encryption through Sophos

Central

Make managing Windows BitLocker and MacOS FileVault full disk encryption simple with Sophos Central Device Encryption. With its three-click policy setup, no key management servers to install, compliance and reporting features, and a self-service key recovery for end users, encryption has never been easier to manage. Installation and setup takes only minutes with the web-based management interface of Sophos Central.

Ensure you're in compliance with data protection regulations with instant detailed reports and audits, role-based management to separate authorization levels, dual officer authorization for critical tasks, secure storage, exchange, and recovery of keys across devices, and centralized policy setup.

Centralize your security with Sophos full disk encryption

[Sophos antivirus](#) and encryption products have been security corporate networks for over 35 years.
