SOLUTION BRIEF

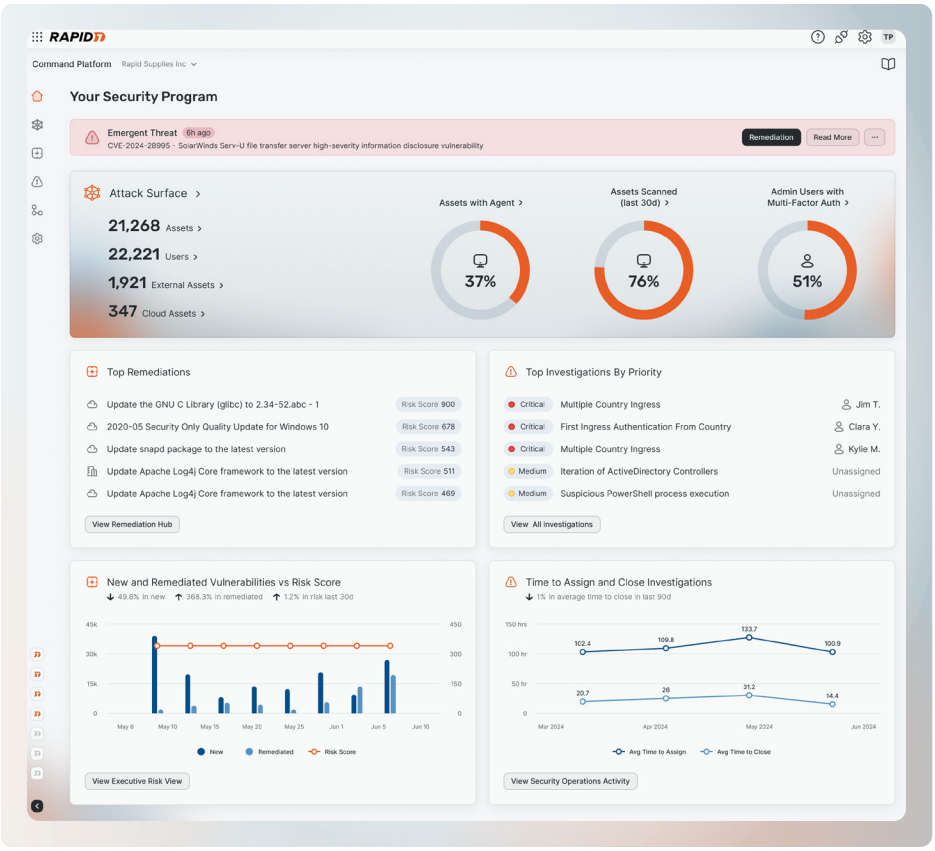
PINPOINT AND PRIORITIZE EXPOSURES FROM ENDPOINT TO CLOUD WITH RAPID7 EXPOSURE COMMAND

Extinguish exposures across your entire attack surface with context enrichment from every tool in your stack

Organizations spend more and more money on tools to manage and secure their organizations, yet have decreasing levels of visibility across their environment. They're left with a sprawling attack surface that's fragmented across internal, external, and hybrid environments. Make no mistake, this gives adversaries the upper hand. Attackers are able to exploit this data sprawl and silos – hiding in mountains of data and banking on your inability to correlate and visualize your attack surface and identify the insights that matter.

Rapid7 Exposure Command combines the power of complete attack surface visibility with high-fidelity risk context and insight into your organization's security posture, aggregating findings from both our native exposure detection capabilities as well as third-party exposure and enrichment sources you've already got in place. This situational awareness enables teams to zero in on the exposures and vulnerabilities that attackers are most likely to target - then take action with speed and precision. By aligning rich risk context with guided remediation and automation, Exposure Command helps teams reduce risk faster and focus efforts where they matter most.

> **Only 17 percent of organizations can clearly identify and inventory a majority (95% or more) of their assets.**
>
> **2024 Gartner® Innovation Insight:** Attack Surface Management report



Establish a single source of truth for your digital estate

Unify and correlate asset inventory and identities across the entirety of your security ecosystem. Cross reference findings against regular external scans to understand your organization's true attack surface and establish a single source of truth across all teams.

Uncover assets lacking proper security controls

Continuously spot gaps in security coverage where assets are missing controls such as endpoint security agents and vulnerability scans, and subsequently which identities have admin access or are missing MFA.

Prioritize vulnerability remediation across your attack surface

Enrich continuous attack surface monitoring with deep environmental context and automated risk scoring to identify and remediate toxic combinations that pose the greatest risk.

Identify paths for lateral movement across cloud environment

Attack Path Analysis enables teams to visualize how attackers could move laterally across interconnected cloud resources – pinpointing the most likely routes to sensitive data and critical assets before they're exploited.

"By 2026, organizations prioritizing their security investments based on a continuous exposure management programme will be three times less likely to suffer from a breach."

Top Strategic Technology Trends for 2024: Continuous Threat Exposure Management, Gartner

Drive accountability and enforce compliance across hybrid environments

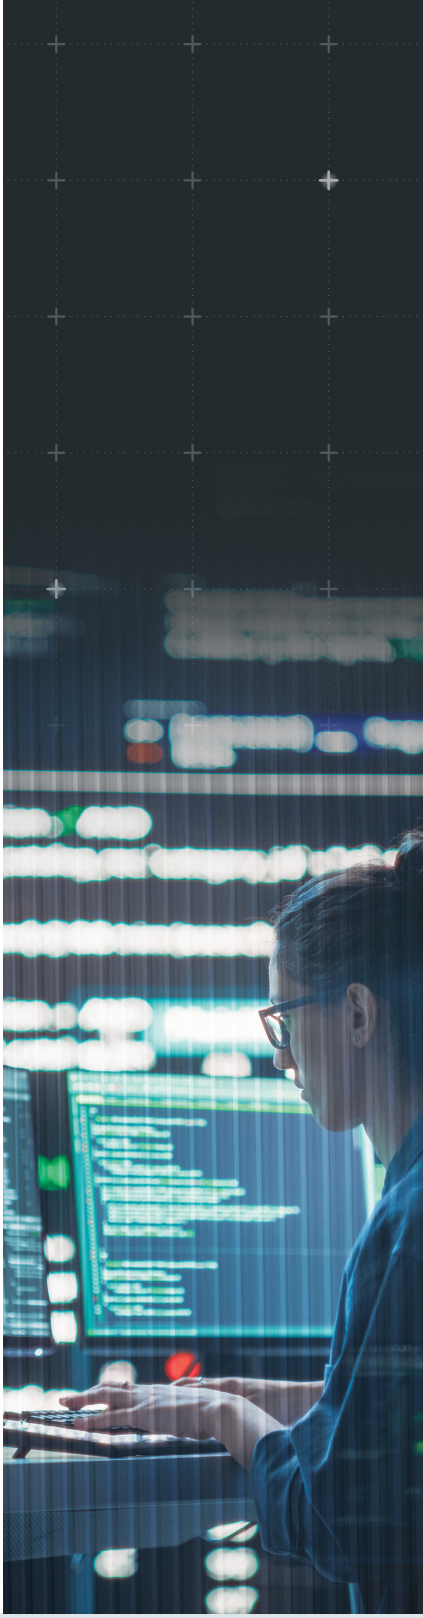
Understand asset posture & ownership and enforce compliance with internal policies, industry best practices and regulatory frameworks across your hybrid environment.

Proactively mitigate exposures in cloud-native apps from code to cloud

Avoid cloud risk before it reaches production with IaC and continuous web app scanning that provides actionable feedback to developers where they work.

Monitor effective access and permissions across your all your clouds

Continuously track all accounts and their effective access across your organization, flagging overly-permissive roles, the potential for privilege escalation and automatically enforcing least privilege access (LPA) policies at scale.



About Rapid7

Rapid7 is creating a more secure digital future for all by helping organizations strengthen their security programs in the face of accelerating digital transformation. Our portfolio of best-in-class solutions empowers security professionals to manage risk and eliminate threats across the entire threat landscape from apps to the cloud to traditional infrastructure to the dark web. We foster open source communities and cutting-edge research–using these insights to optimize our products and arm the global security community with the latest in attacker methodology. Trusted by more than 11,000 customers worldwide, our industry-leading solutions and services help businesses stay ahead of attackers, ahead of the competition, and future-ready for what's next.
