

Amazon EventBridge pricing

Event buses

AWS Free Tier: AWS management events are ingested by the event bus for free.

The EventBridge Event Bus can receive events from AWS Services, SaaS partners ([partner events](#)), or from your own applications ([custom events](#)). Over 250 AWS services automatically send events to the event bus, providing visibility into management operations that are performed on resources in your AWS account ([AWS management events](#)). Management

Amazon EventBridge Overview Features Pricing Resources FAQs Integrations

AWS opt-in data events, custom events, partner events	\$1.00/million events
---	-----------------------

Delivery charges

To another event bus	\$1.00/million events
To a service in the same account	Free
To a service in a different account	\$0.05/million events, except for AWS management events, which are priced at \$1.00/million events

Size of payloads: Each 64 KB chunk of a payload is billed as one event (for example, an event with a 256 KB payload is billed as 4 events).

You may incur additional data transfer charges between regions billed at standard [AWS Data Transfer Charges](#).

There is no additional charge for global endpoints. Custom events published to the global endpoint are billed according to the custom events pricing above.

Pricing examples

If you deliver 5 million AWS management events to a service in a different account in one month, your charges would be calculated as follows:

Monthly AWS management events ingested = 5M events (all equal to or less than 64 KB each)
Monthly ingestion charge = 5M * \$0.00/M = \$0.00 per month
Monthly AWS management events delivered to a service in a different account = 5M events (all equal to or less than 64KB each)
Monthly delivery charge = 5M * \$1.00/M = \$5.00 per month
Total monthly EventBridge charges = \$5.00 / month

If your SaaS application publishes 5 million events in one month and you send 1 million of those events to a service in a different account, your charges would be calculated as follows:

Monthly partner events ingested = 5M events (all equal to or less than 64 KB each)
Monthly ingestion charge = 5M * \$1.00/M = \$5.00 per month
Monthly partner events delivered to a service in a different account = 1M events (all equal to or less than 64 KB each)
Monthly delivery charge = 1M * \$0.05/M = \$0.05 per month
Total monthly EventBridge charges = \$5.05 / month

If you publish 10 million of your own events to an event bus in Account A in one month, send 5 million of those events to another event bus in Account B, and then send those events to another service in Account B, your charges would be calculated as follows:

Monthly custom events ingested = 10M events (all equal to or less than 64 KB each)
Monthly ingestion charge = 10M * \$1.00/M = \$10.00 per month
Monthly custom events delivered to another event bus = 5M events (all equal to or less than 64 KB each)
Monthly custom events delivered to a service in the same account = 5M events (all equal to or less than 64KB each)
Monthly delivery charge = (5M * \$1.00/M) + (5M * \$0.00/M) = \$5.00 per month
Total monthly EventBridge charges = \$15.00 / month

Pipes

Amazon EventBridge Pipes helps you create point-to-point integrations between event producers and consumers with optional transform, filter and enrich steps.

Region:
Europe (London) ▼

Request, after filtering	\$0.46/million requests entering a Pipe
--------------------------	---

Size of payload: Each 64 KB chunk of payload is billed as one request. For example, a batch of events with a 256 KB payload is billed as four requests.

Pricing example

If your source Amazon Simple Queue Service (SQS) queue receives 10 million events in one month, you apply a filter that matches 25% of your records, and you batch five events per request, your charges for sending those matching records to a target would be as follows:

Usage:
Monthly requests sent = 10,000,000 * 25% / 5 = 500,000
Requests after filtering = 500,000

Charges:
Requests after filtering = 0.5M * \$0.40 = \$0.20

Total monthly EventBridge charges = \$0.20

Scheduler

Free Tier: As part of the Free Tier, you can get started with EventBridge Scheduler at no cost. You can make 14,000,000 invocations per month for free. Some applications may be able to operate within the Free Tier.

Region:
Europe (London) ▼

Scheduler Invocations	\$1.15/million scheduled invocations per month, after 14 million free invocations per month
-----------------------	---

Pricing example

If your application scheduled 10 million recurring schedules that invoke two times per month in Region US West.

Usage:
Monthly recurring schedules = 10M * 2 = 20M
Monthly invocations = 20M

Charges:
Monthly invocations: (20M – 14M Free Tier) * \$1.00/M = \$6.00

Total charges: \$6.00 per month

*Your usage of the Free Tier is calculated each month across all Regions (except the GovCloud Region) and is applied to your bill automatically. Unused free usage does not roll over to the next month. Restrictions apply. See offer terms for more details.

API destinations

API destinations helps you send events from an EventBridge Event Bus or Pipe to any web based application in public or private networks. For secure point-to-point connectivity to applications in private networks, such as Amazon Virtual Private Clouds (VPC), API destinations integrates with AWS PrivateLink and Amazon VPC Lattice.

Region:
▼

Size of payloads: Each 64 KB chunk of a payload is billed as one event (for example, an event with a 256 KB payload is billed as 4 requests). You may incur additional data transfer charges for data out to the internet and to private networks. For public endpoints, you will be billed at standard [AWS Data Transfer Charges](#). For invocations to private endpoints using AWS PrivateLink and Amazon VPC Lattice, you will be billed at standard AWS PrivateLink and Amazon VPC Lattice charges for data transfer.

Pricing example

If you invoke 2 million events in one month from your Event Bus to an HTTPS endpoint reachable via the public internet, your API destinations charges would be as follows:

Monthly events = 2M events (all equal to or less than 64 KB each)
Monthly API destinations charges = 2M * \$0.20/M = \$0.40 per month

If you invoke 2 million events in one month from your Event Bus to a private HTTPS endpoint using AWS PrivateLink and Amazon VPC Lattice, your API destinations charges would be as follows:

Monthly events = 2M events (all equal to or less than 64 KB each)
Monthly API destinations charges = 2M * \$0.20/M = \$0.40per month

Event replay

You will be able to specify event patterns to determine which events you want to archive for replay. You are charged at:

Region:
▼

For replay, you are billed as per the custom events pricing above.

Pricing example

If your application published 2 million events in a month, each averaging 6 KB, and you enabled archiving on your development event bus for replay and you replay all of them, your charges would be calculated as follows:

Monthly events = 2M events * \$1.00/M = \$2.00 per month.
Archive Processing = 2M events * 6KB / (1024 * 1024) * \$0.10/GB = \$1.14
Storage Costs = 2M events * 6KB/(1024*1024) * \$0.023/GB = \$0.26 per month
Replayed Events = 2M * \$1.00/M = \$2.00 per month

Total monthly EventBridge charges = \$2 (event publishing) + \$1.14 (Archive Processing) + \$0.26 (Storage) + \$2.00 (Replaying) = \$5.40 per month.

Schema Registry

Usage of the Schema Registry for AWS and custom schemas is free.

The Schema Discovery feature of the Schema Registry includes a Free Tier of 5 million ingested events per month. In most development use cases, where you use discovery in your development environment, your usage should stay within the Free Tier.

For additional usage outside of the Free Tier, such as if you wanted to use Schema Discovery to audit all events passing through your production event bus, you will be charged at:

Region:
▼

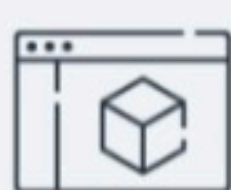

Size of payloads: Each 8 KB chunk of a Schema Discovery payload is billed as one ingested event (for example, an event with a 16 KB payload is billed as two ingested events).

Pricing example

If your development environment published 2 million events in a month, each averaging 2 KB, and you enabled Schema Discovery on your development event bus, your charges would be calculated as follows:

Monthly events = 2M events * \$1.00/M = \$2.00 per month.
Schema Registry = Free.
Schema Discovery = 2M events. No additional discovery costs (5M events included in Free Tier).

Total monthly EventBridge charges = \$2.00 (event publishing) + \$0 (Schema Registry) + \$0 Schema Discovery = \$2.00 per month.
