

PROACT

Cloud Infrastructure Transformation Assessments

Find your hybrid cloud.

Proact understands the **#PowerOfTechnology** in propelling your business forward. It serves as the foundation for transformation, facilitates competitive distinction, and forms the cornerstone of an integrated, connected future.

The selection of appropriate platforms and services can either enable or impede progress, determining whether you achieve success or encounter obstacles to growth. We guide you in making informed decisions, ensuring that your organisation can achieve its utmost potential.

Our pride extends beyond mere technological knowledge; we take pride in understanding our customers' needs. Immersed in their respective industries, we grasp the intricacies of their systems, challenges, and aspirations. We craft a cloud infrastructure that propels them on their journey.

The journey commences with a comprehensive transformation assessment. We meticulously examine your workloads, comprehend your aspirations, and leverage our unparalleled expertise to chart the optimal technological course that leads you to your goals.

Standard Cloud Migration Assessment

For organisations seeking a swift understanding of their options, our standard cloud migration assessment, in partnership with Microsoft, provides a valuable entry point. Key features and outcomes include:

A high-level review of systems and workloads suitable for public cloud migration

Deployment of tools to analyse resource requirements and estimate migration and operational costs in the public cloud

Presentation of findings with high-level recommendations and estimated costs.

OPTION 2

Strategic Cloud Assessment

Our most popular approach involves close collaboration with customers to gain a deep understanding of their application estate and business strategy, as well as exploring a wider range of platform options across public, private and hybrid cloud models. This comprehensive assessment covers:

- In-depth discussions with key stakeholders to understand strategic objectives, challenges, aspirations, and industry drivers
- Utilisation of multiple toolsets to assess:
 - Apps & Data considerations
 - Storage & Compute requirements
 - Security & Compliance considerations
- Definition of data protection, business continuity, and disaster recovery requirements
- A detailed report comparing the current position and transformation options (to serve a 3-5 year period), including:
 - High-level architecture
 - Cost comparisons
 - Benefits comparison

Premium Transformation Assessment

Our premium option, representing our most thorough assessment, is particularly well-suited for larger organisations boasting a substantial application portfolio, multiple sites/data centres, and a global user base. In this regard, we engage our internal Strategic Consulting team, focusing on the application portfolio as the cornerstone.

Our consultants collaborate closely with business and application owners, conducting a comprehensive review of each individual application. The outcome encompasses a detailed implementation plan, meticulously crafted based on cost considerations and prioritisation. To expedite the delivery of business value, we employ the WSJF (Weighted Shortest Job First) approach to implementation.

This service is highly personalised, with previous engagements encompassing:

- A comprehensive assessment of the application portfolio using the '6R' framework
- Development and implementation of a broader cloud operating model extending beyond technology
- Business case development and justification
- Transitioning end-user work environments to O365 or Google
- Re-platforming and re-architecting historic COTS applications to modern SaaS platforms
- Migration of legacy databases to DBaaS platforms, Container-as-a-Service, or IaaS in parallel
- Utilisation of cloud adjacency platforms and hosting to address intricate or custom on-premise solutions.

Booking your assessment

To book your assessment, email hello@proact.co.uk.

Our team will be delighted to discuss the assessment that aligns best with your organisation.

What's included?	Premium	Strategic	Standard
Rapid Migration Assessment using Azure Migrate			
Technical readiness (VM compatibility) with Azure			
On migration right sizing and re-platforming analysis			
3-5 year cloud-consumption cost estimates and TCO benefit analysis, considering pay-as-you-go (PAYG), Azure Hybrid Use Benefit (AHUB) and Reserved Instances (RIs)			
Sustainability and cloud CO2 comparison			
Series of workshops with Microsoft assessment and Proact teams			
An executive level business case on a page			
Migration costs and a prioritised migration delivery plan			
Direct engagement with your key business and IT stakeholders to understand your business and to confirm your objectives			
Analysis and evaluation of up to 3 target state platform options: public cloud, hybrid cloud, private cloud or Co-Lo			
Deployment and use of tooling to gain information to support the identification of:			
Applications and associated infrastructure			
Grouping of infrastructure components that support each application			
Mapping of application dependencies and communication flows			
Workload requirements: compute, storage			
Definition of clear 'fit for purpose' service level objectives			
Availability, capacity, performance, data protection and business continuity / disaster recovery, security			
High-level conceptual architecture - capable of meeting the SLOs - for each option included for evaluation			
Spreadsheet based analysis and report contrasting the current position with future state cloud and other options, including:			
Per option costs (over 3 or 5 years)			
Cost by application/workload			
A comprehensive application portfolio – '6R' – assessment linking business need to future technology provision			
Specialist tool-based 6R analysis and modelling			
Business and service level requirements			
Issues and challenges with current provision			
Iterative engagement with stakeholders to co-develop feasible future state options, evaluate best fit and baseline a target future state			
A final report documenting key discovery findings, options analysis, future state architecture and delivery roadmap			
Indicative financial model			
<i>Optionally, assessment of your wider infrastructure, for instance: data centre networking, WAN, firewalls, data protection and recovery</i>			
<i>Optionally, data governance assessment at an infrastructure and/or application level</i>
