

Oakland Data Governance and Target Operating Model Design Pricing

This service is a consultancy-based service, the price of which is based on a Time and Materials approach, which is wholly dependent on the scope of the work a client needs.

We will typically deploy a small multi-disciplined team of 3-4 individuals to conduct the evaluation over a set period. Dependent on scope and scale build, this number may increase to accommodate the increased effort required.

The blend of skills we draw upon are aligned to the SFIA rate card provided.

Typically, the price range of this service will range from approximately £20,000 for an initial discovery and design phases through to £250,000 for a full end to end support service. These are indicative values only.
