Powering Smarter Portfolio Oversight

DataControl unifies fragmented portfolio data into a single source of truth, empowering PE firms to unlock insights, identify high-impact opportunities, and make faster, more informed investment decisions.

The Problem

Private equity firms rely on accurate, timely data from their portfolio companies to drive performance monitoring and investment decisions. Yet, collecting this data is often a manual, inconsistent, and error-prone process.

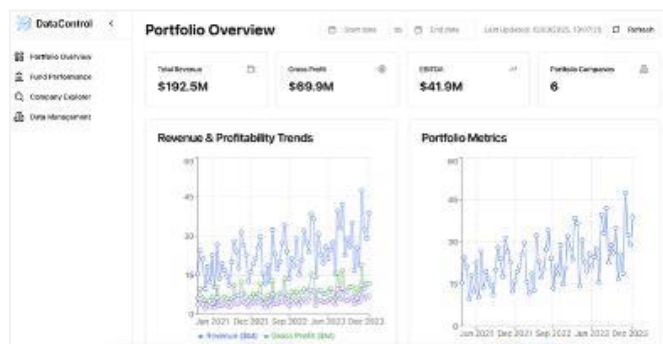

The Complexity

Analysts spend significant time cleaning data, resolving inconsistencies, and following up with portfolio companies, while investment managers face the risk of making critical decisions based on incomplete or inaccurate information. A lack of standardisation and visibility introduces reporting risk.

The Solution

DataControl centralises submissions from across the portfolio into a single, validated source of truth. The platform automates data validation, streamlines error resolution, and ensures consistency across all financial reporting - with real-time monitoring and intuitive dashboards.

Field	Value	Status
date	2025-01-01T00:00:00.000Z	Must be YYYY-MM-DD format
revenue	1000000	Valid
costOfSales	600000	Valid
grossProfit	400000	Valid
adjustedEbitda	200000	Valid

Key features.

Automated Validation

Instantly flags errors and gaps in submissions, improving accuracy and reducing back-and-forth with portfolio companies.

Single Source of Truth

Centralises all submissions into a single, validated platform with real-time monitoring and governance controls.

Enhanced Governance & Control

Real-time monitoring, audit trails, and standardised reports to ensure data integrity, security and compliance.

Intuitive Web App

Manage and monitor portfolio data flows from a centralised control hub.
