

Introducing boxxe's Cisco Consultancy services

This consultancy service provides full-lifecycle Cisco networking professional services that assesses, designs, delivers, validates, and hands over network change so the finished solution works first time and is ready to operate, minimising disruption to your organisation and accelerating time to value.

The consultancy service combines deep Cisco expertise with disciplined delivery governance to de-risk changes and ensure predictable, validated outcomes with a clear path into Business as Usual operations upon completion.

What the Service Provides

- Discovery & Readiness Assessment providing a structured discovery of your existing environment and migration readiness.
- Cisco Network Design of campus, WAN, wireless, SD-WAN and Meraki aligned to vendor and industry best practices to reduce delivery risk.
- Controlled Delivery & Migration that is planned, tested and made live with robust Change governance.
- Validation, Acceptance & Go-Live through structured testing for confidence at go-live.
- Operational Handover — knowledge retention and preparation for operations, including a clean transition into operational IT teams.

Phase	Typical Activities	Key Deliverables	Customer Value
Discovery & Readiness	Workshops, inventory/constraints review, risk/assurance baseline	Readiness assessment, migration approach	Early risk visibility; informed scope decisions
Design	HLD/LLD across campus/WAN/wireless/SD-WAN/ Meraki	Design artefacts, standards, test plans	Proven Cisco designs that reduce delivery risk
Delivery & Migration	Planned change windows, controlled cutovers	Implementation runbooks, change records	Reduced disruption; predictable outcomes

Validation & Acceptance	Structured testing, acceptance criteria	Test results, acceptance sign-off	Confidence at go-live
Operational Handover	Documentation, knowledge transfer, ops readiness	Handover pack, operations checklist	Ready for operations; clear ownership into BAU/Managed Services

Who the Service Is For

Public sector organisations planning to embark upon network change where availability, performance and operational readiness is crucial, including multi-site or multi-vendor environments, where downtime is not acceptable.

Why boxxe

Boxxe has deep Cisco expertise and delivery governance enabling predictable outcomes in complex, live environments. We design solutions for operability (not just go-live) ensuring success long after the project concludes.

We operate tried and tested methods to accelerate time to value for your organisation with structured testing and proven migration pathways.

Customer Problems Solved

- Network changes pose high risk where downtime is unacceptable.
- Complexity across multi-site/multi-vendor estates with limited visibility or assurance.
- Limited internal capacity or appetite for risk in the design phase or during migration.

Customer Benefits & Outcomes

- Reduced delivery risk & predictable outcomes through proven designs and disciplined governance.
- Faster time to value via tried and tested deployment methods.
- Confidence at go-live through structured and validated testing and acceptance.
- Ready for operations with a solution designed for operability by existing teams.

Approach & Methodology

1. **Assess & Design:** We shape the right solution; aligning scope to complexity and risk.
2. **Delivery Assurance:** We execute controlled change with tested runbooks and governance.
3. **Validate Outcomes:** Structured testing before go-live against comprehensive acceptance criteria.
4. **Operational Handover:** We prepare the environment for operations, ensuring knowledge is handed over to existing teams.

Pricing Model

Services are provided on a day rate.

Why Customers Choose This Service

Customers choose boxxe's Cisco Consultancy service because it de-risks change in live network environments and delivers predictable, validated outcomes in complex organisations. The service is designed for operability, not just go-live – so teams have confidence from cutover and a clear, documented path into operations.

Customers value our full-lifecycle delivery capability, from structured discovery and proven design through controlled migration and acceptance. All delivered by specialists who combine deep Cisco expertise with disciplined governance. This blend reduces disruption to your organisation, speeds up time to value, and provides the assurance public sector organisations demand.

Finally, customers appreciate our longer term view of solutions, ensuring success into the future so the network is stable, observable and supported long term.
