

Platform Team as a Service (PTaaS)

Our Platform Team as a Service (PTaaS) offering helps organisations establish and mature a platform engineering capability that enables teams to deliver software safely, consistently and at speed. We provide an embedded, cross-functional platform team that designs, builds and operates shared platform services, allowing application teams to focus on delivering user-facing features.

Engagements are typically delivered as an embedded team over a fixed period to establish core platform capabilities, with options to continue supporting, evolving or handing over the platform as internal capability grows.

PTaaS brings together platform engineering, DevOps, SRE and cloud-native practices to create internal developer platforms, self-service capabilities and standardised delivery pipelines, aligned to your security, compliance and architectural requirements.

Features

- Embedded platform engineering team working as an extension of your organisation
- Design and implementation of shared CI/CD pipelines and DevOps tooling
- Enablement of self-service internal developer platforms and golden paths
- Automation of security, compliance and policy controls as code
- Standardised approaches to environments, infrastructure as code and deployment
- Integration with existing processes, tooling and approval models
- Alignment with cloud-native, DevOps and SRE best practices
- Support for multiple platforms, services and delivery teams

Benefits

- Application teams can focus on product and feature delivery
- Faster, more consistent and reliable software delivery
- Improved developer experience through self-service platforms
- Reduced delivery risk through standardised and automated controls
- Consistent security and compliance without slowing teams down
- Stronger alignment between development, operations and governance
- Accelerated adoption of cloud-native and DevOps practices
- A scalable platform capability that evolves with organisational needs
