

Security Monitoring Assessment and Design Service

Service Description

SERVICE NAME:	Security Monitoring Assessment and Design
SERVICE DESCRIPTION:	Security Monitoring is a risk management activity. In order to deliver the intended benefits, the monitoring must be tailored to the solution, rather than applied generically. This service assesses the specific risks to a corporate or operational network and defines the monitoring solution required to manage associated risks appropriately.
KEY SERVICE FEATURES:	• Fully evidence-based analysis • Sector agnostic methodology • Tailored threat assessment against the organisation and network • Assessment of risks based on attack paths and attack scenarios • Assessment of where monitoring can manage identified risks • Definition of associated accounting items and recordable events • Lowers log volumes by focussing only on what is required • Aligned to relevant guidance including NCSC Security Monitoring and GPG13 • Technology and software neutral
KEY SERVICE BENEFITS:	• Lowers cost of security monitoring solution • Security Monitoring is tailored to the corporate or operational network • Allows genuine business benefit from security monitoring • Provides assurance that risks are appropriately managed through monitoring • Prevents security monitoring becoming a tick-box activity
