

Cloud Hosted Applications

AtkinsRéalis

What We Do

As a vendor-agnostic provider of cloud application hosting, AtkinsRéalis is well placed to work with you and your teams to understand the workloads you want to host in the cloud and to provide you with a solution tailored to your needs.

Whether it is running workloads on virtual servers, deployments of cloud PaaS database solutions, or the orchestration of container-based workloads through Kubernetes, our team of cloud experts and software engineers have the skills, knowledge, and experience necessary. AtkinsRéalis can host cloud applications on Public Cloud infrastructure including Azure, Amazon Web Services, and Google Cloud Platform as well as on Private Cloud infrastructure built on OnApp and Virtuozzo.

Why us?

Complex organisations rely on critical technologies to deliver success. Our professional team helps ensure that the IT and software systems underpinning your business processes are supporting you to achieve your goals. Working collaboratively with you, we develop innovative technology solutions to your complex problems, helping you to implement these in a flexible, agile way.

We have a wealth of experience developing, maintaining, and hosting Cloud Applications from small single line-of-business applications through to complex and large-scale deployments of platforms. From Public Clouds to Private Clouds, our team of experts will work with you to determine the best location for hosting your cloud-based workloads.
