

CIRRUSmaps™ Web Mapping Platform

AtkinsRéalis

What We Do

CIRRUSmaps™ from AtkinsRéalis is a flexible web-based mapping platform providing access to scalable and configurable location-based data.

Using the best open-source software, CIRRUSmaps™ lowers the cost of ownership for a web-based GIS, enabling location-based data to be turned into valuable business information for greater insights and operational efficiencies.

Why us?

Efficient management of geospatial information is fundamental to the success of projects across the private and public sectors; underpinning a wide range of activities, from sustainable development, conservation and environmental monitoring to infrastructure planning and implementation or asset management.

AtkinsRéalis specialise in the capture and use of geospatial data, developing geographical information applications to enable our clients to make the most of their spatial data to realise the full benefits of GIS through our tools, professional advice, support, management, and maintenance services.
