

The IT Procurement Platform

A digital platform for compliant, transparent IT purchasing

PROBRAND

Summary Presentation

A Shared Digital Procurement Platform

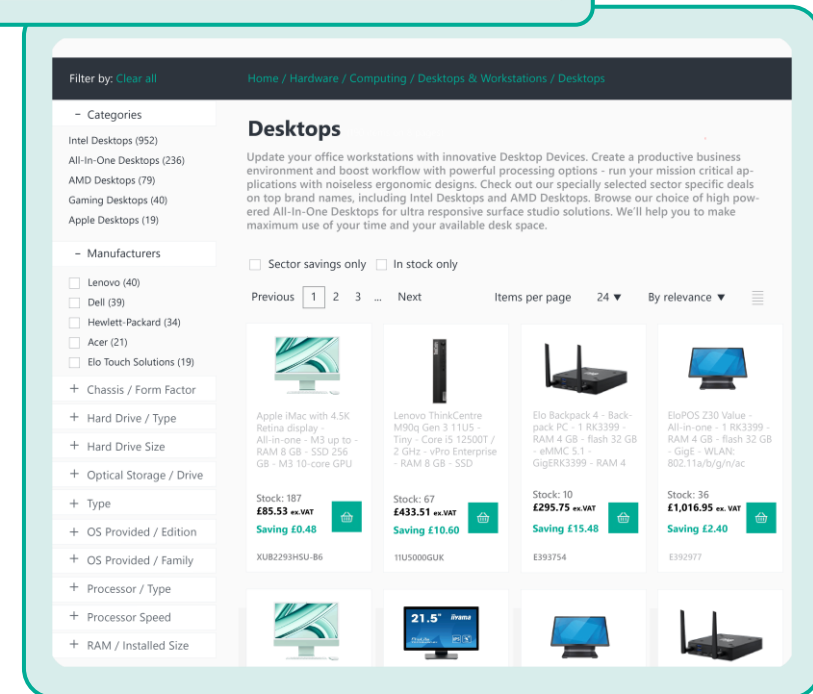

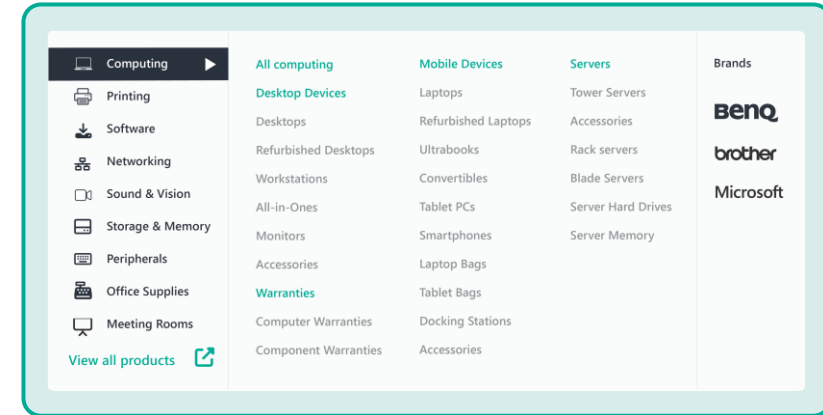

Consistent, transparent IT procurement at scale

PROBRAND

The Probrand IT Procurement Platform provides a more consistent and transparent way to procure IT products and services across complex organisations.

It is designed for environments with multiple locations, teams, and stakeholders, helping organisations improve data quality, visibility, and governance, while integrating cleanly into existing digital and ERP ecosystems.

- ✓ A single platform approach for IT procurement
- ✓ Improved consistency and structure of procurement data
- ✓ Designed for large, distributed organisations
- ✓ Built to integrate with ERP-led procurement processes

Core Platform Capabilities

PROBRAND

A single system covering the full IT procurement lifecycle

The Probrand platform brings together multiple procurement functions into one integrated environment, replacing fragmented processes with a single, structured workflow.

Access to a live catalogue of IT products and services

Real-time price and stock comparison across authorised suppliers

Managed catalogues to standardise what users can buy

Special bid and volume discount support

Full order management, tracking, and invoicing

Complete quote and order history in one place

Built-in compliance and audit documentation

Integration with ERP and identity systems

This provides a complete, end-to-end procurement platform rather than a point solution.

Creating a Single Source of Truth

Structured, reliable procurement data

PROBRAND

In many organisations, procurement data is spread across emails, spreadsheets, supplier portals, and local systems - limiting visibility and making reporting and audit more difficult.

The Probrand platform addresses this by providing a single digital procurement workflow, capturing consistent, structured data at every stage of the process.

Centralised
visibility of quotes,
prices, and orders

Consistent data
structure across all
purchases

Clear historical record
of procurement
decisions

Improved
reporting and
governance insight

This creates a reliable dataset that supports better oversight, analysis, and assurance.

Built-In Compliance and Auditability

Reducing reliance on manual assurance

PROBRAND

The platform is designed to support compliance with the Procurement Act 2023, and Public Contracts Regulations 2015 by embedding governance and transparency directly into the procurement process.

Compliance evidence is captured automatically as part of normal purchasing activity.

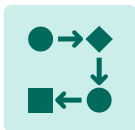

Automatic multi-supplier price comparison

Transparent presentation of available market pricing

Digitally captured evidence of competition and due diligence

Complete audit trail for all quotes and orders

Downloadable compliance documentation per transaction

This approach supports consistent, repeatable compliance without retrospective effort.

Designed to Integrate, Not Replace

Oracle ERP punch-out integration

PROBRAND

The Probrand platform is designed to integrate into existing finance and ERP environments, rather than operate as a standalone system.

It supports direct Oracle ERP punch-out, aligning with established procurement workflows.

Oracle Punch-out Process

This maintains governance, control, and data integrity within existing systems.

Stronger Assurance, Better Data

Without added operational burden

PROBRAND

By centralising procurement activity within a single digital platform, organisations gain clearer visibility and stronger assurance across IT purchasing.

Improved visibility
of procurement
activity and history

Reduced audit and
assurance risk

Less reliance on
manual compliance
checks

More consistent
data across teams
and locations

A scalable foundation
for future
procurement maturity

The platform is designed to support digital, procurement, and finance teams with minimal disruption to day-to-day operations.

A single, compliant platform for transparent IT purchasing
