

Hazard Reporting

Spot issues early, fix them quickly and prevent harm

WHY HAZARD REPORTING MATTERS

You can only manage the risks you know about. Front-line employees see hazards and near misses every day, but if it's hard to speak up or there is no clear process, those warning signs are easily missed.

Paper forms, email inboxes and ad-hoc spreadsheets make it difficult to log hazards consistently, see what is outstanding or understand where issues are recurring.

With AssessNET, you can encourage timely reporting, standardise how hazards are captured and ensure that every report is reviewed, prioritised and acted upon.

KEY FUNCTIONS

Capture hazards in a consistent way

Use simple, configurable online forms so employees and contractors can report hazards, unsafe acts and near misses in a few clicks. Capture key details such as location, type of hazard, people affected and immediate actions taken.

Make reporting accessible to everyone

Provide access on any device – desktop, tablet or mobile – so hazards can be reported at the point they are seen, whether on site, in the office or in the field.

Triage and prioritise reports

Automatically route new reports to the right team or manager. Assess severity and likelihood, apply risk ratings and prioritise which issues need immediate attention.

Analyse trends and hotspots

Use dashboards and reports to identify recurring hazards, high-risk locations and common root causes. Focus your resources where they will have the greatest impact on preventing harm

PROACTIVELY MANAGE CONTRACTOR SAFETY

AssessNET brings your hazard reports, actions and outcomes into a single, cloud-based platform. Configurable workflows, notifications and dashboards help you keep on top of new reports, overdue actions and emerging trends.

By making it easy to report issues and acting visibly on what people tell you, you can strengthen your safety culture, prevent incidents and demonstrate that you are listening and responding.
