

Health & Safety Package for Healthcare

Join up health and safety across your healthcare organisation

WHY A DEDICATED PACKAGE FOR HEALTHCARE MATTERS

Healthcare environments are complex, high-risk and heavily regulated. From wards, theatres and outpatient clinics to laboratories, estates, catering and community services, you need a consistent way to manage health and safety across very different teams, buildings and clinical activities.

Spreadsheets, paper forms and disconnected systems in each department make it hard to get a clear picture of risk, performance and compliance. It becomes difficult to see which actions are outstanding, where incidents are rising, or how well policies are being followed on each site or ward.

The AssessNET Health & Safety Package for Healthcare gives you a common framework and toolset that works for both local teams and central governance, so everyone is working in the same way, and information can be shared and compared easily.

KEY FUNCTIONS

A single, cloud-based platform

All hospitals, sites and services access AssessNET through a secure, cloud-hosted platform. Central and local users see the same up-to-date information, with role-based permissions aligned to clinical governance, estates, facilities and H&S responsibilities.

Core modules for day-to-day safety management

Bring together key modules such as Risk Assessment, Accident & Incident Management, Audit & Inspection, with optional tools including Hazard Reporting, Training Management and DSE –CoSHH & SDS, Fire Risk Assessment, Contractor Management, Logbooks, Manual Handling, Permit to Work, Method Statement, DSE and BI reporting – in one joined-up system.

Templates tailored for healthcare

Use standard templates and question sets designed or configured for common healthcare scenarios, such as ward, theatre and outpatient risk assessments, sharps and slips-trips-falls hazards, premises checks, medical gas and plant inspections, manual handling assessments and routine estates logbooks, while keeping the flexibility to adapt them to local procedures.

Consistent recording and follow-up

Capture incidents, hazards, inspections, assessments and logbook checks in a structured way, then create and track actions through to completion. Dashboards show which sites, divisions or services are up to date and where further support or escalation may be needed.

Central oversight with local ownership

Allow departments and sites to manage their day-to-day health and safety tasks, while giving the organisation, trust, board or group – a clear, real-time view of trends, compliance status and outstanding actions across the whole healthcare portfolio.

PROACTIVELY MANAGE SAFETY IN HEALTHCARE

AssessNET is trusted by organisations across the UK to manage health, safety and risk in a consistent, auditable way. The Health & Safety Package for Healthcare applies that capability to hospitals and healthcare providers, in a format that reflects the realities of clinical, estates and support services.

By joining up incident reporting, risk assessments, audits, training, hazardous substances, contractors and actions, you can move from reactive problem solving to proactive improvement, protecting patients and staff, supporting wellbeing and giving leaders the assurance they need.
