

Permit To Work

Control high-risk work with clear, auditable permits

WHY PERMIT TO WORK MATTERS

High-risk work needs more than a toolbox talk. Activities such as hot work, confined space entry, work at height and intrusive maintenance can introduce significant additional risk if they are not tightly controlled.

Paper permits, email trails and spreadsheets make it hard to see which permits are active, whether all checks have been completed, or if permits have expired without proper closure.

The Permit to Work module gives you a structured, digital process for planning, approving and closing out high-risk tasks, so you can demonstrate that work is only carried out when all precautions, isolations and authorisations are in place.

KEY FUNCTIONS

Create bespoke permit templates

Design fully customisable permit templates for different types of work, capturing the exact information you need – from job details and location to hazards, controls, PPE, isolations and emergency arrangements.

Issue, track and close permits

Raise permits in AssessNET, record all required checks and approvals, and track their status in real time. Apply clear start and expiry times so permits cannot be used indefinitely, and record safe shutdown and hand-back when work is complete.

Link permits to supporting information

Associate permits with relevant risk assessments, method statements, contractor records and RAMS project files, so all key information sits together in a single, traceable pack.

Maintain a full audit trail

Keep a complete history of each permit including who created it, who authorised it, what was changed and when it was closed to support investigations, audits and tender requirements.

PROACTIVELY MANAGE CONTROL OF WORK

AssessNET brings Permit to Work into the same cloud platform as your wider health and safety system. Connect Permit To Work with modules such as Risk Assessment, Method Statement, Contractor Management to create a complete, demonstrable safe system of work.

Live dashboards, alerts and document history help you stay ahead of expiring permits, missing approvals and overdue actions, so you can keep tight control over high-risk activities across all your sites.
