

DR Boost for VMs

Confidence in Your Disaster Recovery

How do you know your failover process will work when you need it most? DR Boost for VMs is a simple, structured service that tests your virtual machine failover without disrupting production.

By running up to four DR drills per year, we help you identify issues, ensure compliance, and gain peace of mind. Stay ahead of disasters with proactive, real-world testing that keeps your business running smoothly.

Key Benefits of DR Boost for VMs

Managed by certified experts

Our team of certified experts have a wealth of knowledge ready to manage your service.

Focus on what matters most

Increase your team's productivity by freeing up their time and resources to focus on core business activities.

Reduce downtime

Reduce downtime and accelerate time to resolution so that your team are empowered to solve issues as quickly as possible.

Improve business continuity

Every second counts when your organisation goes offline. Protect our productivity, customer experience and company reputation by having a robust plan in place in case of disaster strikes.

Key Features

Quarterly DR drill

Scalable to the size of your estate

Simple, easy to use service

Cloud Core add-on service

SCC Vision™

Designed and developed by SCC, our online portal will allow you to manage your cloud with ease.

Use the replication status dashboard within Vision to monitor the replication status of your virtual machines, giving you further peace of mind your business is running as it should be.

DR Boost For VMs

VISION

Clarity | Confidence | Control

The all-in-one SCC Vision™ solution allows you to manage your cloud with ease. Seamlessly integrating with Microsoft Azure, AWS and SCC private cloud platforms, SCC Vision™ secures and optimises your cloud environments.

How you'll benefit from SCC Vision™:

Get Cloud Clear

Drive efficiencies and effortlessly modernise with status overviews and recommendations.

Feel Cloud Confident

Give users confidence in the integrity and security of your cloud with robust data protection

Achieve Total Cloud Control

Take control with complete visibility of your cloud environments and optimised Azure resource management.

SCC Vision™ provides one portal for you to:

- ✓ **Centralised Visibility:** See a unified view of your cloud environment so that you can monitor DR readiness and replication status in real time.
- ✓ **Service Request Fulfilment:** Acts as the gateway for submitting and tracking service requests related to DR Boost, including scheduling DR tests, or requesting remediation support.
- ✓ **Service Improvement & Risk Registry:** Integrates with SCC's internal service improvement and risk registry processes, ensuring that DR Boost evolves in response to customer feedback and operational learnings.

See the platform in action and find out more about how to gain operational efficiencies, enhance security and deliver cost savings, talk to us today and book your demo.
