Penetration Testing As A Service

In 2024, the UK Government Cyber Breaches Survey found that 50% of UK businesses had suffered a cyber-attack in the previous 12 months, risking company data, operations and reputation. Despite these challenges, many organisations still rely on traditional, outdated methods for testing vulnerabilities, which can leave them more susceptible to attacks.

Penetration Testing as a Service (PTaaS) provides a modern and continuous security approach, offering real-time alerts for risks to enable timely remediation before exploitation.

Why Use PTaaS Over Traditional Methods?

Gain the ability to scan for vulnerabilities alongside your regular penetration testing services. By detecting potential vulnerabilities early, you can implement the necessary remediation strategies to strengthen your defences. This added layer of security provides peace of mind, knowing you have a robust system in place to protect your valuable data and assets from potential cyber threats.

Key Benefits Include

- Provides an ongoing assessment of your organisation's security posture, alerting you to vulnerabilities quickly in real-time.
- Assign Remediation Tasks at every level to your team via our PTaaS Web Portal, saving time and resources.
- Scalable and flexible to adapt to the changing needs of your organisation.
- Increase security awareness across your organisation by promoting a proactive security culture.

Key Features

Powerful PTaaS Web Portal for data analysis

24/7 monitoring for vulnerabilities

Real-time risk identification and repediation

Live dashboard with dynamic reporting

Continuous retesting to reduce risk

Aligns with regulatory standards e.g ISO27001

Access to a team of highly accredited experts

Cost effective with a flexible pricing model

Penetration Testing As A Service

PTaaS Web Portal

Our portal uses automated scanning to detect vulnerabilities faster and seamlessly integrates with your internal systems to simplify the distribution process.

Enhance your situational awareness and empower your team with actionable threat intelligence tailored to your specific needs. With over 30 live feeds offering up to the minute information, you can dive deep into global security trends and potential risks specific to your field.

How Does It Work?

01 . Testing

Advanced vulnerability identification and mitigation techniques with consultant-led testing through our CREST accredited team.

02 . Remediation

Comprehensive remediation advice with our dynamic reporting and live chat consultation within SecurePortal. Set up role-based access control and assigned remediation steps to users, with a centralised, clear overview of tasks.

03 . Ongoing Scanning

Automated Vulnerability detection for web apps and infrastructure for 24-7 live monitoring and real-time alerts to reduce the window of risk.

Why Partner With SCC

At SCC, we redefine cybersecurity by seamlessly blending reliability, expertise, and a commitment to your journey in the digital landscape. Our comprehensive solutions are tailored to your organisation's needs and its maturity level, ensuring a robust defence against ever-evolving cyber threats.

With expert guidance tuned to your growth ambitions, we help clear obstacles, accelerate outcomes, and embed effective security principles across people, process and technology.
