## Governance

**Instilling trust and garnering respect among the stakeholders we serve through transparent leadership, to drive sustainable growth**

- ✓ Leadership by experienced and engaged directors and the board's key committees
- ✓ 50% of directors are from traditionally underrepresented racial/ethnic minority groups, and 30% of directors are female
- ✓ Robust ethics program with proactive audit and risk assessments
- ✓ Continual investment in information security and data privacy to aggressively maintain best-in-class assurances

DXC discloses its ESG performance in alignment with preferred ESG frameworks, including SASB, TCFD, CDP and GRI, and in adhering to their principles. UN Global Compact Signatory since 2017.

# Service Definition

# Procurement Analytics

DXC's Procurement Analytics is a fully managed service for processing and visualising spend data.

It includes spend data cleansing, classification, enhancement and aggregation, analysis and visualisations via cloud-based Software-as-a-Service (SaaS) and Power BI.

Supports budget management, category management, cost optimisation, supplier management, economic development, and drives savings.

**Setting data foundations:**

Improved data quality through cleansing, deduplication, classification, and enhancement. Enhances internal data with external sources for more comprehensive insights.

**Transparent processes build data trust:**

Transparent processes with explainable, auditable data enhancement methodology increases trust.

**Enhanced decision making:**

Enhanced procurement decisions via budget, category, cost, and supplier management.

**Support initiatives and policy alignments:**

Enables analysis that drives economic development initiatives and policy alignment.

**Identify savings:**

Identify savings opportunities through spend analysis and supplier performance insights

**Intuitive reporting, analytics & dashboards:**

Intuitive interface designed for business, technical, and analytical users. Dashboards and reports for business audiences, improving clarity and communication.

**Fully managed service:**

Fully managed service reducing workload with dedicated support and training.

**Scalable & flexible:**

Scalable SaaS access with multi-user licenses for team flexibility.

# Service Overview

Establishes a procurement data foundation, providing a golden source to support data driven decision making

## Collection

Right data in; **extracted, aggregated** and **validated**, identifying common errors and challenges with over **450 data validation checks** and **fixes**

## Enrichment

Supplier **aggregation** and **clustering** across organisation and data inputs  
Standardised procurement taxonomy **categorisation** of supplier spend to support **category analysis** and management reporting  
Additional enrichment via **3<sup>rd</sup> party** data sources

## Delivery

The SaaS platform or Power BI dashboard reports enable analysis of **category, supplier, spend, geography and organisation structure** with additional API access.  
**No integration required** to meet unique business needs and drive data-driven decisions

# Service Overview

DXC has developed processes for data cleansing, classification and cloud-based applications that deliver management information described by customers as a key enabler of procurement transformation across the UK public sector and Higher Education. Initiatives supported by the analysis include:

- Collaborative procurement
- Tracking collaborative contract adoption
- Economic development
- BPI/KPI reporting
- Benefits tracking
- Strategic sourcing
- Capability development
- Policy/FOI information

We have developed a project planning methodology that engages stakeholders at all levels at an early stage and seeks to ensure that users derive maximum value.

DXC's in-house team works in partnership with customers to build and deliver cloud applications with management information designed to help business users make more effective decisions.

We take a pragmatic approach to classification, recognising the issues and difficulties encountered when working with incomplete, inaccurate data from disparate systems. All organisations can provide sufficient data to support a supplier classification; we start there to ensure that the aggregated view is based upon all spend, consistently classified. More granular classification of commodities is also available if the source data will support them.

We start with a unique, vigorous data cleansing process, subjecting the input data to more than 450 checks looking for corruptions, omissions, incorrect values and content errors already encountered during the processing of thousands of datasets. Our automatic classification methods match data against reference databases of validated public sector suppliers and commodities. Automated classification is enhanced by manual validation when there are low confidence matches found to improve data quality.

Training and support are delivered in a variety of ways to suit the individual's role and preferred learning method including webinar, video, telephone, user groups and a dedicated support site.

# Getting Started

# Getting Started

---

DXC's Procurement Analytics is a fully managed service for processing and visualising spend data.

It includes spend data cleansing, classification, enhancement and aggregation, analysis and visualisations via cloud-based Software-as-a-Service (SaaS) and Power BI.

Supports budget management, category management, cost optimisation, supplier management, economic development, and drives savings.

---

## **Backup, Restore and Disaster Recovery:**

DXC's Procurement Analytics service is managed and hosted in Microsoft Azure. Multiple versions of the database and application are maintained to deliver a robust, resilient and available service to customers.

---

## **Onboarding & Offboarding:**

Onboarding – The first stage in a Procurement Analytics project is a data kick off meeting with the client to:

- Understand their data estate

- Understand any specific procurement business questions they would like to answer

- Agree a data extract specification

- Organise secure delivery of data

Offboarding – DXC will work directly with the client to ensure a smooth offboarding process – client specific.

---

## **User Enablement:**

Once data has been processed and published to the preferred BI tool, users are offered training via webinar. The training covers the basic functions of the Procurement MI tools plus where the user can find more information on DXC's Support Site. More advanced training is available covering some of the more complex analyses.

---

## **Service Constraints:**

None.

# Commercials

# Commercials Overview

DXC's Procurement Analytics is a fully managed service for processing and visualising spend data.

It includes spend data cleansing, classification, enhancement and aggregation, analysis and visualisations via cloud-based Software-as-a-Service (SaaS) and Power BI.

Supports budget management, category management, cost optimisation, supplier management, economic development, and drives savings.

## Ordering Process:

The ordering process is as follows:

- Prospective client discusses their requirements with a DXC representative
- DXC provides a written proposal or statement of work (SoW) detailing the recommended services offered and prices
- Prospective client and DXC will complete the G-Cloud Call Off Contract
- Prospective client confirms acceptance of order confirmation and associated terms and conditions
- Prospective client issues DXC with a purchase order detailing the services required.

## Invoicing Process:

Customers will be invoiced:

- 50% of the total amount on issuance of a purchase order
- 50% on delivery of the file containing the cleansed data
- Payment must be made within 30 days through electronic transfer.

## Termination:

Please see associated terms and conditions..

## Support & After-sales:

DXC's Procurement Analytics Support team offer global technical and functional support and managed services for all clients of this service. Support is available via telephone using a dedicated support hotline or via email. Support hours are 9am to 5.30pm Monday to Friday.

New customers are onboarded via the Support team who deliver user training (usually online) and provide an overview of the support materials available from a dedicated user support site. Materials include documents, videos, "How Do I...?" guides, a FAQ section, plus hints and tips to get the most from the service..
