About Littlefish	6

Microsoft Azure Cloud

Littlefish provides a suite of Microsoft Azure-based cloud software services delivered under a Software as a Service (SaaS) and Infrastructure Software as a Service (iSaaS) model. These solutions offer pre-configured, secure, policy-aligned cloud functionality that enables public-sector organisations to adopt Azure capabilities without the need to deploy or manage underlying infrastructure.

All services are delivered as standardised, subscription-based cloud software products in accordance with the defined Lot 2 scope under G-Cloud 15, which covers cloud-hosted applications and infrastructure-related software capabilities.

Service Scope

The service provides centrally managed, cloud-hosted software components that support secure, scalable and compliant use of Microsoft Azure, including:

- Pre-configured Azure environments delivered as software modules with defined functional and security baselines
- Cloud-native identity, access and role-based policy controls (IAM) implemented through Azure software capabilities
- Embedded monitoring, alerting, observability and analytics delivered as part of the SaaS/iSaaS solution
- Automated compliance and policy enforcement controls aligned to recognised standards (ISO 27001, Cyber Essentials, GDPR)
- Azure-native DR/BC (Disaster Recovery / Business Continuity) functions provided within the software service
- Consumption dashboards and cost governance tooling provided as part of the cloud software package
- Integration interfaces supporting interoperability with Microsoft 365, Entra ID and approved public cloud environments
- Continuous feature and security updates delivered automatically through Microsoft's cloud platform

These functions are consumed as software, not delivered as consultancy, deployment or managed operations (which fall under our Lot 3 Cloud Support services)

Service Features

- Standardised SaaS/iSaaS modules hosted within Microsoft Azure
- Automated configuration enforcement aligned to best-practice reference architectures
- Built-in encryption, threat detection and security event analysis
- Policy-based resource governance and compliance automation
- Multi-tenant-ready service design suitable for public-sector environments
- Azure platform-native resilience features including replication and geo-redundancy
- Role-based access and identity federation integration
- Continuous enhancement through Microsoft's cloud release cadence
- In-platform availability dashboards, usage reports and cost insight visualisations
- Support for interoperability across approved cloud platforms where applicable

Service Benefits

- Rapid adoption of enterprise-grade Azure capabilities without deployment or infrastructure build
- Strong security posture through automated policy enforcement and baseline configuration
- Continuous compliance alignment reducing audit overhead
- Predictable cost model through subscription pricing
- Access to the most recent platform innovations without implementation effort
- Scalable functionality supporting changing demand and organisational growth
- Reduced need for specialist cloud engineering skills
- Improved operational maturity through real-time visibility and integrated governance capabilities

About Littlefish

- Littlefish is an award-winning Cloud based Managed IT Services Provider. Through our capability and delivery of service excellence we have become an established and credible alternative to the 'usual suspect' large Multi £Billion Managed Service Providers and IT Outsourcers in the mid-market and enterprise.
- Our purpose is to disrupt the conventional Managed IT Services models – where the usual suspects typically fail to perform – by delivering service solutions that are tailored to the precise needs of your organisation and which are communicated in clear and straightforward language. Our people (and users) first approach delivers a higher quality experience and will add tangible business value to your organisation.

Our service solutions are designed to consider and deliver tangible outputs in terms of improved business performance. The IT experience of your users can be enhanced to promote more agility and improved quality output. Furthermore (but often overlooked), highly available, better performing IT services, with expert support on hand when it's needed to get your users working again, can engender employee health and well-being. Because of these deliverables, workforce productivity levels are increased, and it's likely that our highly attuned service model will also enable you to effect cost-efficiency gains. What's not to like!
