Document Management Plus

Intelligent document management that simplifies workflows and saves time across health and care.

Service overview

Primary care teams are under increasing pressure as the volume of documents continues to rise. Processing these documents is often complex and time-consuming, and traditional systems or paper-based records make the challenge even harder. Practices need a smarter way to manage information without adding to their workload.

Document Management Plus (Docs+) is a next-generation solution within EMIS-X® designed to transform document handling. It builds upon the core Document Management capabilities of EMIS-X with additional powerful functionality. Its intuitive design streamlines processes, reduces administrative burden and helps improve patient care.

EMIS-X core Document Management provides a centralised inbox for all inbound documents, making it easy to view, filter and search. Users can upload new documents directly to the care record, update metadata and add clinical codes quickly and accurately. Secure access to shared documents across care settings ensures continuity of care.

Advanced capabilities offered by Docs+ will include NHS Mail integration for automatic imports, document annotation for adding notes and scanning tools to digitise paper records. Configurable workflows allow practices to align document processing with their own protocols.

Key benefits

- **Save time** by automating document handling.
- **Work smarter** with configurable workflows.
- **Improve care** through faster, accurate document processing.
