Jira Software Discovery

Meeting your business needs head-on

Jira Software Discovery is the key to solving your pressing business challenges. Whether you're starting with Atlassian tools or looking to optimize your current setup, we've got you covered:

- Want to get more out of your Atlassian tools?
- Want to adopt Agile ways of working?
- Struggling with an efficient flow of work through the software development life-cycle?
- Want to improve the management of your backlog?
- Want to improve the visualization of your backlog or roadmap?
- Want to align your business strategy with your daily work?
- Struggling to co-ordinate work across multiple teams, and manage dependencies between them?

How Jira Software can help

Jira Software offers a wealth of features designed to empower your teams and boost productivity:

- **Transparency:** All stakeholders can inspect planned, in-progress, and delivered work.
- **Scrum and Kanban boards:** Out-of-the-box boards promote workflow efficiency and predictable delivery.
- **Flexible workflows:** Customize workflows to match your business processes.
- **Performance tracking:** Keep a close eye on team performance with real-time reporting.
- **Time tracking:** Monitor productivity with time-tracking capabilities and performance charts.

Why partner with Eficode?

As an award-winning Platinum Solution Partner, we have more than 15 years of experience in helping companies perform better with their Atlassian tools.

Our collaboration with Zettle is a testament to our dedication:

Jira Service Management Discovery

Market forces reshaping service management

In today's evolving business landscape (driven by the rise and prevalence of digital technologies and distributed teams), traditional team structures and work methodologies are being redefined. Modern operations, support, and business teams face the challenge of delivering exceptional digital service experiences. But standard service management practices are often encumbered by rigid systems and processes that hinder cross-team collaboration.

How Jira Service Management can help

Deliver value fast: Jira Service Management empowers your organization to rapidly deliver value by streamlining and optimizing service operations.

Accelerate development & operations: Jira Service Management facilitates the seamless integration of development and operations teams, escalating innovation and collaboration.

Empower all service teams: Jira Service Management empowers all service teams, enabling them to work cohesively (regardless of their functional domain).

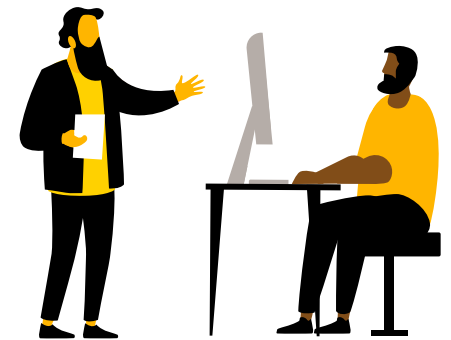

How an Eficode Service Management Discovery can help

Ensure your tools, people, and processes are optimally aligned for success. Our 2-day ITIL-based discovery assessment engagement will thoroughly analyze and identify the current ITSM practice maturity and capability, aligning them with future Jira Service Management methodologies. We'll then deliver our findings to you in a detailed discovery report.

Current analysis

Our thorough assessment will uncover your organization's current strengths and weaknesses, while also pinpointing operational risks that require immediate attention. This will guide you in optimizing your service management for efficiency and resilience in a dynamic business environment.

Desired solution (with the latest JSM features)

We'll outline how Jira Service Management can solve your organization's current weaknesses and operational risks, including the latest features such as:

- **OpsGenie:** Enhance incident management with real-time alerts and on-call scheduling.
- **Assets:** Effectively manage and track your assets, improving asset-related processes.
- **Forms:** Create customized forms for streamlined request management.
- **Assist & Virtual Agent:** Leverage AI-powered virtual agents to provide quick and efficient customer support.
- **Atlassian Intelligence:** Harness the power of AI-driven insights for informed decision-making.

Existing service desk use case analysis

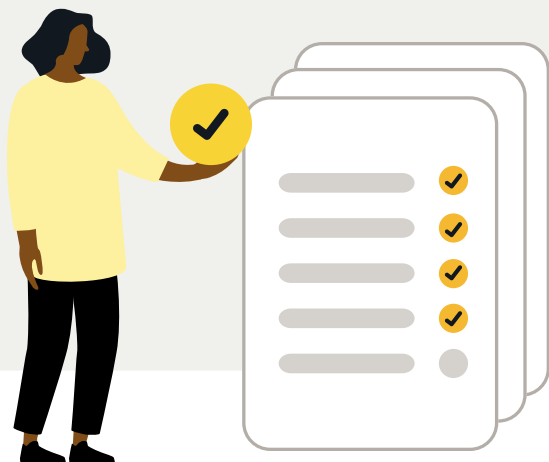

Our experts will conduct a thorough analysis of your existing service desk use cases, identifying areas where Jira Service Management can bring about transformative improvements.

Implementation approach recommendations

Based on the discovery assessment, we will provide tailored recommendations for implementing Jira Service Management within your organization. These recommendations will ensure a smooth and effective transition to modern service management practices.

Actions for implementation

We will outline actionable steps for the implementation of Jira Service Management and the Eficode Service Management Discovery findings, ensuring your organization realizes the full potential of our solution.

EVALUATING AND OPTIMISING YOUR COMPLETE ATLASSIAN TOOLSET

Atlassian applications are an ever expanding suite of increasingly complex products used by a wide range of organisations of varying size to achieve an array of objectives.

Whether you need to develop software, launch new products or services, collaborate with teams or provide excellent customer support, these tools are often mission critical to creating value for your organisation.

As great as the technology is, it's only as good as how well it's put to use. Over time, your business organisational structure, application features and scale of use can change dramatically meaning many customers are not exploiting the tools to their full potential.

Atlassian Applications Health Check

Eficode's Atlassian Tool Health Check will provide an analysis of how healthy your Atlassian applications are. Get ahead with security, configuration, scalability, integrations and apps, with a proactive Health Check, uncovering potential challenges with your environment before they lead to problems.

It will deliver a full analysis of the current implementation and setup including:

- Evaluation of current solution design capability to achieve desired business outcomes
- Benchmark against technology & industry best practices
- Assessment of tool configuration, 3rd party integrations & customisation
- Marketplace App analysis
- Backup, disaster recovery & business resilience
- Recently migrated to Atlassian Cloud? Advice and guidance concerning how to leverage new cloud features

Action Plan & Roadmap

As well as the analysis report you'll also take away an action plan & roadmap. This includes step-by-step advice for any urgent remedial actions required, mitigating against unexpected downstream problems that can build up, so that you spend less time firefighting & more time focusing on delivering value to your customers. The plan also provides advice and guidance concerning longer-term strategic use of the tools & changes that may need to be introduced.

eficode

Overview:

A comprehensive solution package designed to empower organisations in optimising their ability to plan, track, and prioritise work within Jira and other Atlassian tools.

Ideal for:

Atlassian & Jira Users (new or existing): Suitable for organisations new to Atlassian or those with an established experience base in Atlassian tools. Especially those facing challenges in project delivery or struggling to fully leverage these tools to meet business goals.

Scalability Concerns: Perfect for those seeking solutions to improve scalability and long-term effectiveness in their Atlassian ecosystem.

Organisations of All Sizes: Our solution packages are tailored to meet the needs of organisations of varying sizes, ensuring scalable support which aligns with growth and operational demands.

Benefits

Improved Productivity: Streamlined workflows and clearer prioritisation can lead to more efficient use of resources, allowing teams to focus on high-impact tasks.

Enhanced Transparency: By providing real-time visibility into project progress and task status, stakeholders can make informed decisions and stay aligned on priorities.

Better Resource Allocation: With improved tracking and planning, organisations can more effectively allocate resources, ensuring that the right people are working on the most critical tasks - maximising the value teams deliver to their customers.

Increased Collaboration: Teams can work more cohesively by centralising work in Jira, improving communication, and reducing silos between departments.

Faster Time to Market: Prioritising work effectively, and avoiding bottlenecks, leads to quicker project completion and delivery of products or services.

Data-Driven Decision Making:

Enhanced tracking provides organisations with insights and analytics that help in refining strategies, improving performance, and anticipating potential challenges.

Scalability and Agility:

Improved planning and prioritisation processes make it easier for organisations to scale their operations, and adapt to changing market conditions or business needs.

Increased Customer Satisfaction:

More efficient planning and execution enable faster response times to customer needs and expectations, leading to higher satisfaction and loyalty.

Reduced Operational Costs:

By eliminating inefficiencies and ensuring work is properly prioritised, organisations can reduce wasted time and resources, lowering overall costs.

Return on Investment:

Customers can typically expect to achieve an ROI of at least 4 times their initial investment. This return is driven by significant time saving and improved efficiency.

Migration Risk Assessment

Confidently prepare for the migration of your Atlassian tools and receive a comprehensive Risk Assessment report with recommendations and solutions.

Why is a Risk Assessment needed?

Atlassian's Cloud products such as Jira, whilst sharing a lot of commonality, are in many ways, very different to their on premise (Server and Data Center) counterparts. Key differences include:

- Product, Roadmap and Feature differences
- Based on different codebases
- Apps & Integrations
- Email & Mail servers
- General Site Admin

Migrations are never an easy process, and no migration is ever the same; they all carry risks. Our approach is proven to mitigate those risks. The thought of moving your business operations is hard enough, but the way you migrate it can make or break the process. Eficode provides a proven migration methodology that is tried and tested, ensuring you have the assurance that your migration will go as smoothly as possible.

Risk Assessment - What's included?

A Risk Assessment (RA) is a three-day piece of work consisting of two days allocated to workshops, and one day for report authoring:

- Capture the overall requirements and business drivers, creating a picture of the current versus the desired tools landscape
- Capture and/or whiteboard any processes which may have dependencies with, or be affected by, the migration
- Inspect the content and configuration of all Atlassian tools within the scope for the migration

What's in the Report?

- Risk factors with mitigations and recommendations
- Migration runbook
- Plan with estimated timings, including communications guidance and other ways to minimise business impact
- Guidelines for a test migration (dry-run) to minimise the risk of unexpected problems during the live migration

Key Benefits

- Fully understand and document risks with mapped solutions
- Increase chances of a successful migration
- Reduce business disruption
- Quicker ROI - get value out of your Atlassian cloud investment quicker
