

OpenText Content Suite ECM Cloud Service - Service Definition

Service Overview

SynApps Solutions has developed its Enterprise Content Management in the Cloud service to enable organisations to acquire a subscription-based, best-of-breed, enterprise content service applications in a rapid timescale.

SynApps Solutions is a leading provider of enterprise content management (ECM) solutions and associated consultancy, implementation and support services. SynApps is 100% focused on delivering Enterprise Content Management and Enterprise Content Services and is generally acknowledged by ECM vendors, SIs and its customers as an organisation that employs the foremost ECM subject matter experts in the UK and provides the highest level of customer service.

SynApps Solutions have partnered with OpenText to deliver an alternative cloud platform for their ECM solutions on either OpenText Content Suite.

OpenText Content Suite Platform offers a simplified, clear cost option for your OpenText solution operation. It can reduce the cost, time, and staff needed to care for and feed your OpenText solution. Content Suite Platform in the Cloud eliminates the need for investment in infrastructure and frees up your expert IT staff.

Content Suite Platform is built to be as flexible and configurable as what you are used to with your on-premise applications.

OpenText Content Suite Platform allows organisations to accelerate their cloud implementations and, consequently, their business. The set-up and configuration process is easier and the organisation is always using the most current product versions:

SynApps Solutions is responsible for development, testing, and upgrade of the software. Cloud delivery takes the complexity out of your purchasing decision. OpenText provides all the hardware, software, and system administration expertise needed to manage a new solution, allowing you and your employees to focus on your core business. This is a significantly more valuable way to spend your time.

Service and Product Features

OpenText Content Suite Platform is a comprehensive Content Services system designed to oversee the lifecycle management of information across the enterprise from creation or capture through archiving and disposition

As the foundation for digital transformation, OpenText Content Suite Platform seamlessly manages information flows through the organization, ensuring secure, compliant information management that enhances productivity. OpenText Content Suite Platform provides:

- Enterprise-wide control over any type of content with comprehensive security and privacy
- An intuitive experience that empowers users with the information they need, when and where they need it, and with the context to use it effectively
- Improved process efficiency by automating manual content-related tasks and enabling integration of content to lead applications using Extended ECM.
- The ability to seamlessly share and collaborate on content, both inside and outside the organization.
- Reduced expenses with a scalable repository designed to manage high volumes of content at all stages of the lifecycle

OpenText Content Suite Platform is the foundation for a broad range of OpenText products, including OpenText™ Extended ECM Platform, OpenText™ Extended ECM for Microsoft® Office 365, OpenText™ Extended ECM for SAP® Solutions, including SuccessFactors®, OpenText™ Extended ECM for Oracle® E-Business Suite, OpenText™ Extended ECM for Salesforce®, and other OpenText Enterprise Information Management (EIM)

Example Use Cases

- Divisions / Business Units of organisations that require a low cost / low commitment acquisition of an enterprise-class, document management application on a service basis.
- Organisations that have multiple legacy document management systems and wish to migrate to a modern configurable document management platform can take advantage of the cloud pricing model to migrate system by system without any one system incurring the major capital outlay of acquiring enterprise-wide document management technology and the infrastructure to support that.

- Organisations that require a shared document management system for document / collaboration purposes.

Technical Features

Document Management in the Cloud is based on OpenText's Content Suite Enterprise Content Services platform;

- Robust security model.
- Content retention policy management.
- Collaboration services
- Content Services
- Records Management
- Information Lifecycle Management

An overview of the G-Cloud Service (functional, non-functional)

Document management technology for organisations to deliver Document management systems rapidly and efficiently.

Live service delivery of configured Enterprise Content management systems on a subscription model.

Information assurance

All datacentres (locales) are highly resilient Tier3, UK sovereign status.

Level of backup/restore and disaster recovery that will be provided

Organisations can choose from a range of protection levels. The default level is Local Protection - data is held in a single named UK locale and protected using server virtualisation and cloud storage which improves data durability. If organisations cannot tolerate the loss of data, they are recommended to consider the optional Remote Protection level.

Optional: Remote Protection can be chosen where virtual servers and data are stored in two UK sovereign locales, with a copy maintained in a primary named UK locale and copied to a geographically remote UK locale.

Organisations can also purchase additional backup capacity for the Cloud platform on which secondary copies of data can be automatically created and retained. Such data can also be replicated for even higher data durability.

On-boarding and Off-boarding processes/scope etc.

An organisation will need to engage in definition of their enterprise content management system requirements and the configuration / composition of the

system, as well as the more detailed activities for the system to integrate to the organisation's existing business processes.

SynApps provides comprehensive on-boarding and off-boarding ECM Cloud Support services through its submission to G-Cloud Framework.

Service Profile

Item	Description
Minimum Term	12 Months
Invoicing Profile	Monthly in Advance
Managed Service Support	Service Management 9.00 - 17.30; Mon-Fri; Excl UK Bank Holidays and including:
	Annual Disaster Recover (DR) Test
	One (1) Major Release Patch Deployed Annually;
	One (1) Minor Release Patch) Deployed Annually

Product / Service Options

Enterprise Content Management in the Cloud service provides OpenText Content Suite document management platform for development and delivery of configured document management applications.

- Flexibility for growth - the solution scales indefinitely and on-demand.
- Pre-configured document management applications available for integration with an organisation's processes and line-of-business applications.
- Bespoke configured document management services can be developed in house or by SynApps in advance of subscribing to the services.
- Assured Security - the platform is hosted in highly resilient Tier3, UK sovereign data centres.
- Based on its experience in delivering and supporting Cloud-based document management services to its customers, SynApps is able to provide a fully-managed service covering system administration and full application support for the customer's configured applications

Service Management Details

SynApps Solutions provides a flexible Service Management facility, delivering the most appropriate level of support depending on the requirements of our customers and tailored to their needs.

SynApps Customer Support methodology is based on ITIL methodology, which aims to maintain a positive relationship with customers by identifying the needs of existing and potential customers and ensuring that appropriate services are developed to meet those needs. The service management is designed to be flexible and tailored to deliver the most appropriate level of support depending on the requirements of our customers.

Each customer is assigned a Server Manager who is responsible for managing the on-going customer relationship and is accountable for the success of the client's support application. The Service Manager is assigned prior to go live and works closely with the project team (customer and internal) and with project manager to ensure a smooth transition from project to business-as-usual support. The Service Manager is accountable to the head of Support and account teams for ensuring customer success.

Success is typically achieved through a variety of mechanisms a summary of which can be found below: -

- ❑ **Maintaining Customer Relationships** - SynApps continues to understand the needs of customers and establishes relationships with potential new customers. This is conducted as part of regular review meetings and reporting.

- ❑ **Identify Service Requirements** - SynApps will understand and document the desired outcome of a service and decide if the customer's need can be fulfilled using an existing service offering or if a new or changed service must be created.
- ❑ **Customer Satisfaction Survey** - SynApps will plan, carry out and evaluate regular customer satisfaction surveys. The principal aim of this process is to learn about areas where customer expectations are not being met before customers are lost to alternative service providers.
- ❑ **Handle Customer Complaints** - SynApps will continuously monitor and records customer complaints and compliments, to assess the complaints and to instigate corrective action if required.

The Service manager is backed up by our in-house support team and infrastructure project team. The service manager becomes the primary point of contact for the customer to ensure that smooth transition from the build and implementation phases of a deployment into the live operation goes smoothly. The Service Manager will be available to address and answer queries and ensure that any technical issues are handled with the highest priority.

Personnel Checks

All our resources are UK based and have either undergone Baseline Personnel Security Standard (BPSS) checks or are Security Cleared (SC).

Service constraints

No built-in service constraints.

Service Maintenance

SynApps will adhere to the following in terms of maintenance windows:

“Planned Maintenance” means any pre-planned maintenance of any infrastructure relating to the Services. SynApps shall provide the Client with at least twenty four (24) hours’ advance notice of any such planned maintenance:

- Planned maintenance of the infrastructure relating to the Services shall happen between the hours of 00:00 and 06:00 (UK local time) Monday to Sunday and/or between the hours of 08:00 and 12:00 (UK local time) on a Saturday and/or Sunday;
- Planned Maintenance shall be excluded from any availability calculation in regard to Service Credits but shall be included in the monthly service reporting;

“Emergency Maintenance” means any emergency maintenance of any of the infrastructure relating to the Services. Whenever possible, SynApps shall provide the Client with at least six (6) hours’ advance notice:

- Whenever possible Emergency Maintenance of the infrastructure will happen between the hours of 00:00 and 06:00 (UK local time) Monday to Sunday and/or between the hours of 08:00 and 12:00 (UK local time) on Saturday and/or Sunday unless there is an identified and demonstrable immediate risk to a Client's environment;

Emergency Maintenance shall be excluded from any availability calculation in regard to service credits but shall be included in the monthly service reporting.

Service Levels - Support Hours

Our service desk is operated on a 9am-17.30 (UK Time), Monday to Friday as standard. With an option for 24/7 on-call support which can be negotiated as required.

Tickets can be raised via email, our portal or via a dedicated telephone number.

Service Levels - Platform availability

SynApps offers a 99.95% availability SLA based on the availability of both the portal and the virtual server environment itself.

Service Levels - Severity Definitions

Our Service Level Agreements definitions are as follows: -

- S1 - Severe problem preventing customer or workgroup from performing critical business functions.
- S2 - Customer or workgroup able to perform job function, but performance of job function degraded or severely limited.
- S3 - Customer or workgroup performance of job function is largely unaffected.
- S4 - Minimal system impact; includes feature requests and other non-critical questions.

Service Levels - SLA Summary

Our standard service levels are applied as follows: -

- S1 - 1 Hour response time, 4 hours resolution relief/target.
- S2 - 2 Hour response time, 8 hours resolution relief/target.
- S3 - 8 Hour response time, 5 business days resolution relief/target.
- S4 - 24 Hours response time, 20 business days resolution relief/target.

Training

A range of user and administrator training options are available as standard or custom training modules can be created. These are provided by our Lot 3 - Enterprise Content Services (ECM) Managed Support Services.

Service Lead Time

New Clients (organisations) will typically be deployed within 1 month from order. Shorter deployment times may be available and prioritised upon request.

Existing Organisations have instant access to additional usage with no notice period required.

Data restoration / service migration

Customer has ability to extract their information. A migration service is offered separately and is recommended to maintain integrity of information under retention.

Consumer responsibilities

- Definition of and configuration / composition of document management system.
- The control and management of access and responsibilities for end users.
- Organisations must also be aware of the variable nature of the billing based on usage.
- The consumer is also responsible for ensuring it applies suitable controls to its sensitive data/application.

Details of any trial service available

Demonstration service is available by agreement.
