

Specification and Procurement Services

End-to-End Support for Digital Transformation

Developing a specification to support procurement activity can be complex. It's essential to ensure a specification delivers the solution that meets your requirements – and not just a list of functional requirements. We take a scenario and clinical workflow-based approach to developing specifications and translate those 'real-life' requirements into functional and non-functional specifications.

We have worked with a range of organisations to develop specifications across a broad range of operational and functional areas:

- Electronic Health Records (EHR)/Electronic Patient Records (EPR)
- Patient Administrative Systems (PAS)
- Radiology Information Systems (RIS)
- Picture Archiving and Communication Systems (PACS)
- Vendor Neutral Archives (VNA)
- Pathology (LIMS)
- Pharmacy
- Theatres
- Maternity
- Electronic Document Management (EDM)
- Health Information Exchange (HIE)
- Order communications
- Electronic prescribing
- ER/A&E
- Nurse documentation
- E-forms

We work with our clients' teams to ensure the right decision is made on the most appropriate procurement route and to ensure a smooth process through which suppliers are robustly evaluated, and that the result meets the criteria agreed at the outset.

Our team have managed a variety of procurements for our clients for over 12 years assisting clients in the final stages of the procurement process to ensure that the contract is completed to the satisfaction of the client (and the successful supplier) ensuring that the client's interests are protected and any risks are fully evaluated and understood. This stage also includes the production of a contract summary and working with the local legal teams where required.

We provide specialist consultancy services to support NHS, healthcare and public organisations including social care, with the identification and selection of hardware, software and services. This service includes specification and tendering support as well as commercial, procurement and contract management.
