

TRUSTMARQUE

Prism for Microsoft

Realise the true value of your Microsoft technology.

Prism is Trustmarque's value intelligence platform for Microsoft designed to enable customers to deliver and realise the true value of technology. Prism from Trustmarque is designed to simplify software adoption through licence optimisation, aid the delivery of optimum cost efficiencies, while creating visibility to drive valuable change management support. Prism allows customers to realise the true value of their Microsoft investments.

What is Prism for Microsoft 365 Copilot?

Prism for Copilot enables you to gain visibility of the M365 Copilot usage across the tenant and makes it possible to ensure the software reaches the correct users who are actively using the technology, and reallocating access for those who aren't embracing Copilot.

Furthermore, Prism provides details on specific M365 Copilot operations on a user level, ascertaining key information such as what M365 Copilot is being used for, and the specific applications users are finding a return on investment with. This helps you to derive the most value possible from Copilot.

Benefits of Prism for Copilot

Visualising and understanding data

- Insights into how your organisation is using Microsoft 365 Copilot

User-specific operations counts

- Usage is displayed for each individual user, including specific applications

Copilot usage profiling

- Prism segments users based on business units, job titles, departments or sub-organisations

What is Prism for Azure?

Prism for Azure monitors usage and provides complete visibility into an organisations Azure resources.

Through detailed usage and spend analytics organisations can gain governance and compliance recommendations, as well as benefit from cost optimisation.

Benefits of Prism for Azure

Data visibility

- The data in Azure that is hidden becomes visible
- Pre-built dashboards presenting actionable insights

Asset management

- Identifying spend helps improve cost forecasting
- Enhances asset management best practices with your existing data
- Reduce Azure costs by right-sizing resources.
- Resource tagging

What is Prism for M365?

Prism for M365 is designed to support the visibility of your Microsoft 365 suite of products. The platform provides usage information, helps realise cost avoidance and wastage, and highlights any potential savings. It also supports the ability for virtual tenants, within a single tenant, for a breakdown of allocation and cost.

Benefits of Prism for 365

Licence value assessment

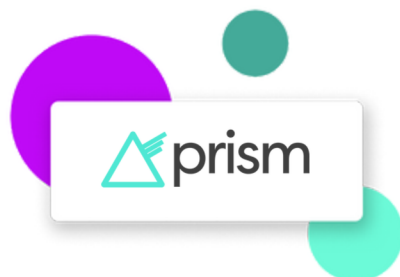

- Evaluate practical optimisation opportunities aligned with the business strategy

Microsoft 365 profiling

- Detailed workshops discussing current devices, users, job profiles, and business goals

Commercial optimisation

- Agreement and licensing optimisation vs your strategy, purchasing models, current and future agreements, and licensing

Customer Success Highlights
