

SafeGUARD Pricing

Transparent and Predictable Pricing

Our pricing model is simple, cost effective and predictable. With easy installation and no hardware, media, or transit costs, you can easily scale up or down as demand changes. No hidden costs, no surprises.

Reduced total cost of ownership

SafeGUARD solutions reduce the total cost of ownership associated with managing data as there are no requirements for:

- On-site hardware
- Physical media for data storage
- Additional money to off-site data for backup, DR or archive
- Extra expense to store and manage physical storage media
- Making time to manually complete a backup or archiving process

How pricing works

SafeGAURD pricing is based on the amount of data selected for backup and archiving. The amount of data you protect is the amount of data you pay for and that's it. Included in the price is:

- Multiple copies of data in UK data centres
- 24/7 support from a UK based support team
- Disaster recovery functionality
- Set up of the service
- Secure local copy of backup data

Protection of Microsoft 365 and G Suite data is on a per-licence basis.
