

Prism by Trustmarque for Azure

Prism for Azure is a Trustmarque developed technology intelligence platform that takes raw data from Azure.

You can monitor usage and optimise costs keeping your business running smoothly and use interactive dashboards to uncover the precise information you need to be more efficient.

Launched in 2021, it has already helped over a hundred customers to save over £20 million.

The 'pay for what you use' model used by most public cloud providers adds to the difficulty: If usage is monitored and managed appropriately, this model can result in significant savings, but it's also easy for costs to spiral out of control.

Individuals within an organisation are able let costs spiral with little or no accountability. There are many factors that contribute to cloud costs that are not obvious upfront, including: virtual machine instances, memory, storage, software licenses etc.

Therefore, it is important for you to employ a cloud cost management strategy to prevent huge overspend. That's where Prism comes in.

Benefits of Prism

Data visibility

- The data in Azure that is hidden becomes visible
- Pre-built dashboards presenting actionable insights

Strategy planning

Enhances collaboration between Trustmarque and your organisation's internal teams when planning IT strategies.

Asset management

- Identifying spend helps to improve cost forecasting
- Enhance asset management best practices with your existing data
- Reduce Azure costs by right-sizing resources
- Resource tagging

Controlling Azure costs

When adopting new cloud technologies, many organisations face with new and increased challenges to find and manage costs. Organisations understand the cost benefits of on-premises versus the advantages of a cloudbased infrastructure.

Using Prism for Azure, organisations are empowered with enhanced visibility into their cloud deployments and actionable insights into how to optimise spend.

Empower your organisation with connected IT by using Prism.

Services are aligned to your needs are underpinned by Trustmarque's quality standard, expertise, accreditation and heritage to ensure you get the most from your IT investments.

Prism key features

Complete visibility into Azure resources

Detailed usage and spend analysis

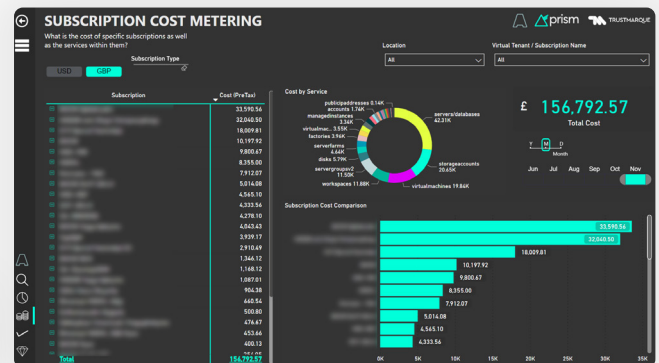

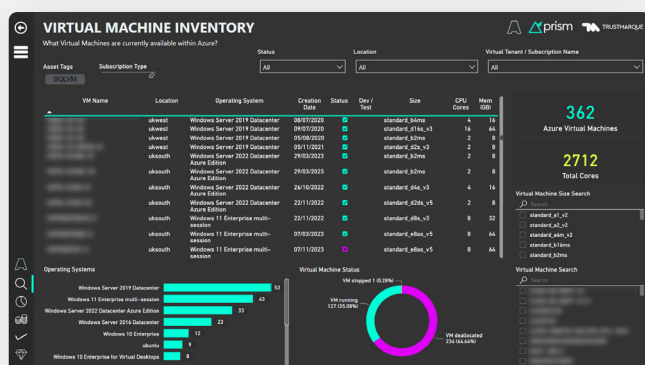

Governance and compliance recommendations

Cost optimisation recommendations

Unlimited user accounts

Azure health analysis

Once Prism is deployed, our consultants will analyse your Azure environment and provide expert advice in a detailed report highlighting areas where you can reduce spend.

SQL reserved instance and hybrid use benefit optimisation

Lower your total cost of ownership by combining Azure Reserved Instances with pay-as-you-go prices to manage costs across predictable and changeable workloads. You can further reduce your costs with reserved instance size flexibility.

Technology intelligence by Trustmarque

We have a deep understanding of Microsoft Azure and have an established Cloud Centre of Excellence comprising of deployment engineers, pre-sales cloud solution architects, managed services experts, project managers and agile delivery managers.

Our Technology Asset Management team understand Azure cost management and azure optimisation. Our expertise in software licensing also helps you maximise your on-premise licenses for use in the cloud and are able to assist with implementing robust governance process to operate an efficient cloud cost management program.
