Ensono Services on G-Cloud 15

Ensono enables public sector organisations to achieve better outcomes through **cloud-first solutions**. Our team of technology consultants and engineers brings **over 15 years' experience** delivering complex, high-impact projects for the UK's leading organisations. We work collaboratively with clients understanding their goals and applying **deep technical expertise** to design, build, and manage the right solution.

Our G-Cloud 15 Services:

- **Data Assessment & Implementation:** Secure, optimise, and modernise your data for the cloud.
- **Strategic Modernisation Planning & Implementation:** Transform legacy applications and infrastructure for agility and resilience.
- **SRE as a Service (SREaaS):** Proactive reliability, automation, and performance for critical systems.
- **Enterprise Test Services:** Comprehensive testing to ensure quality, security, and compliance.
- **Identity & Access Management:** Deliver secure, scalable, and frictionless access across your organisation.
- **Flex® Cloud Services:** Scalable, on-demand cloud engineering and managed services that flex with changing priorities.

Our public sector track record includes strategic platforms for central government, rapid NHS Covid-19 chatbot delivery, and support for local authorities, transport, education, housing, and charities. We're also recognised for delivering results in the private sector. See our website for client stories. [Client Stories | Ensono](#).

Ensono Strategic Modernisation Implementation Services

Get Ahead. Stay Ahead.

Continuous modernisation that eliminates unnecessary complexity. That gives you the agility, scalability, and availability you need, while mitigating costly risk, to gain a competitive advantage. Empowering you to drive business growth through customer satisfaction, retention, and acquisition.

**Modern applications to meet demand,
drive growth, efficiency and innovation.**

AI-Driven Application Modernization

EVOLVE

AI-Accelerated Foundation Modernisation

"Stabilise, secure, and enable change"

- AI portfolio rationalisation
- AI code & architecture audit
- AI-assisted replatforming & refactoring
- AI-powered DevSecOps

AI is used to **understand, de-risk, and modernise existing applications at scale.**

INTEGRATE

AI-Driven Decoupling & Optionality

"Decouple, de-risk, and create choice"

- AI-discovered integration patterns
- Automated domain & capability extraction
- API & event design acceleration
- SaaS replacement intelligence

AI focuses on **understanding flows, dependencies, and seams** to safely decouple systems

BUILD

AI-Enabled Digital Product Engineering

"Differentiate, scale, and innovate"

- AI-assisted product discovery
- AI-accelerated solution design
- AI-powered engineering
- AI-driven continuous delivery

AI accelerates **design, delivery, and optimisation of new systems**, not just code generation.

Our Approach to Delivery Management

Agile Framework

Structured, agile delivery framework tailored for Open Banking's needs.

Dedicated Team

Dedicated UK-based team for in-time-zone collaboration and rapid decision-making

Single Accountability

Single-point accountability via your Delivery Manager, ensuring alignment and orchestration across all phases.

Transparent Communication

Transparent communication and proactive risk management throughout the engagement.

Agile Delivery

- Agile sprints drive iterative development, continuous integration, and rapid feedback
- Automated DevSecOps pipelines ensure every change is tracked, tested, and secure
- Regular sprint reviews, demos, and retrospectives with OBL will foster transparency and adaptability
- Azure DevOps used for sprint management, backlog, and continuous delivery
- Integrated Story Mapping and timeline planning tools provide clear visual alignment, helping teams and stakeholders stay focused on priorities and progress.

Why Our Delivery Management Stands Out

Code Management

ADRs

All approaches, patterns and procedures carefully considered and agreed through ADRs (through Ensono Stacks' ADRs if this is the chosen approach) - ensuring repeatable and consistent patterns going forward.

DevOps CI/CD practices

For infrastructure-as-code.

Code Quality

Automated linting, code documentation and code quality rules.

Pull Requests

Peer review process ensuring code quality and collaboration.

Trunk-Based Development

Version control through Git. 'Main' branch is always deployable, with branches created for features and bugs - enabling frequent deployments and simplifying the release process.

Testing

Test Strategy

QA Engineers will work with you to agree and define a comprehensive test strategy to align with the project's goals and timelines.

QA Testing

Manual testing to ensure the requirements have been met.

Automated Tests

Automated testing will be a core foundation. Implemented by engineers throughout the delivery and peer reviewed before merges into the Main branch. Largely autogenerated by Ensono Stacks paired with Copilot. The types of automated test will include:

- **Unit Tests** covering individual units of code / logic.
- **Integration Tests** covering multiple components and their dependencies together.
- **Smoke Tests** to validate the efficacy of deployments.

UAT

User testing to validate the business requirements have been met.

Observability & Monitoring

Ensono Stacks

Use of Ensono Stacks platform template ensures full observability and monitoring capabilities throughout the solution.

Pipelines & Workflows

Designed with full logging, monitoring and alerting capabilities. Logs from pipeline runs will be captured, feeding dashboards and enabling custom error handling and alerting.

DevOps Patterns

All deployments through CI/CD pipelines and using infrastructure-as-code will allow full observability and traceability of deployments and changes.

Azure Monitor

Wider Azure component monitoring, with custom alerting capabilities. Ability to configure alert and trending thresholds and custom alerts (e.g. emails, service desk tickets).

Client stories

Reducing costs and improving resident experiences for Notting Hill Genesis

CLIENT

Created in 2018 from two well-established housing associations, Notting Hill Genesis (NHG) is now one of the largest housing associations in London and the southeast. It owns and manages more than 66,000 homes and employs around 2,000 staff.

CHALLENGE

NHG needed a creative IT overhaul to improve inefficient manual processes and deliver a higher standard of service to tenants. Front-line staff were under pressure to deal with thousands of resident requests, but manual processes and existing technology meant issues often took days to address.

SOLUTION

Using Microsoft Azure, Ensono delivered a bespoke, microservices platform that has significantly improved the efficiency of front-line staff while providing a better service for residents. WorkWise' simplifies, standardises and automates key businesses processes such as repairs, lettings, arrears, visits and inspections, making them available to residents via a single self-serve online portal.

WorkWise transforms NHG's existing technologies, including Northgate and Microsoft Dynamics, from being off-line on the weekend and during out of hours, to fully supporting the new agile and highly-available infrastructure. The scalable, flexible new platform gives NHG the ability to cost-effectively extend capabilities in future at a low risk.

OUTCOMES

- 24/7 customer service - Providing around-the-clock support through self-service, while significantly lowering support costs without the need for 24/7 support.
- 30% time saving - Housing officers can spend more time in the field, accessing key business processes using their mobile devices and saving 30% of their time.
- Increased customer satisfaction - Front-line staff have more time to spend with residents and spend less time doing manual tasks
- 99.95% availability which equated to just 1.5 minutes of downtime per day.

New finance system transforms the student experience

CLIENT

This client is one of the world's leading educational institutions, serving a diverse student body around the world.

CHALLENGE

A 20-year-old finance system required manual workarounds, causing inefficiencies and confusion in tracking student payments. There was often confusion when a student needed to find out how much they still owed as this information was spread across four different sources of truth. The client also wanted to give its students access to a self-service online portal where they could view and pay outstanding invoices to further reduce the burden on the finance team and enhance the student experience.

SOLUTION

Ensono, selected as the client's strategic transformation partner, supported the selection and integration of a new SaaS finance system.

Reviewed the challenges posed by the current system vs the improvements a modern system would deliver.

Documented user personas and challenges, determined high-level systems architecture, and developed integration and business value maps. All known risks, assumptions, issues, and dependencies were documented. Then we recommended a shortlist of the three best solutions.

Once selected, Ensono integrated existing Dynamics 365 apps used by the Admissions team with the new SaaS solution to automatically create invoices and record payments.

OUTCOMES

- Students can easily view their accounts & track payments online.
- 96% of the invoicing process automated, saving staff a lot of time.
- Connects the invoicing process directly to the new CRM.
- High quality code, handovers and documentation.
- Client team upskilled and exposed to new ways of working.

"The Ensono team has been so easy to work with. Their transparency, strong governance, and problem-solving abilities paved the way to them becoming our strategic partner for digital transformation."

Supporting digital growth, improving customer experience and increasing business agility for The Gym Group

CLIENT

The Gym Group is a low-cost, high-quality health and fitness business with more than 225 no-contract gyms open 24 hours a day.

CHALLENGE

The Gym Group's digital estate is integral to its business strategy to connect with customers and drive sales. However, some elements were reaching the end of life, and there were limited options to scale. This meant changes and optimisations had become expensive and didn't reflect its best-in-breed customer service.

The Gym Group needed a platform that could handle high traffic and transactions at peak times and deliver a streamlined purchasing experience.

SOLUTION

Ensono worked with multiple stakeholders across The Gym Group to align and develop an improved eCommerce platform and solves user pain points and delivers a better digital experience for existing and potential members.

Ensono designed a tested prototype for an SEO-optimised, user-friendly public-facing sales site and membership area that proved robust enough to deliver high performance and a smoother experience during peak traffic.

Ensono integrated Customer Identity Access Management (CIAM) with a new headless CMS and microservices solution to support new members with a seamless sign-on process and drive conversions. Single Sign On (SSO) between the legacy site, mobile app, eCommerce site and members area brings a seamless experience for members and secures valuable personal data.

OUTCOMES

Friction was removed from the checkout process, reducing the number of customers that abandoned transactions and increasing conversion by 50 basis points.

~£8m incremental revenue from improvement in conversion.

10x faster page loading leading to greater organic rankings.

Faster deployment of platform enhancements with 45 minutes from build to production.

"We really needed a partner who were engineering heavyweights with a solid eCommerce know-how, and we got that with Ensono. The team were able to challenge our thinking and able to drive best-of-breed technology into our stack. A re-platform is always a tough project, but Ensono rose to meet the technical and delivery challenges. The results have been incredible, and The Gym Group is now set up for the future" | Jim Hingston, Digital Product Director, The Gym Group

Modernisation supports growth for national retailer

CLIENT

The client is a large British multi-national retailer of clothing, footwear and home products.

CHALLENGE

The retailer had ambitious plans to grow its online presence and expand into multi-brand retail. But its ageing monolithic architecture was holding it back. Software updates were limited to once a week, and every change required a full platform release, creating bottlenecks and frustration across teams.

Meanwhile, warehouse staff were manually packing hundreds of thousands of orders a day. As ecommerce sales surged, fulfilment backlogs grew, and customer expectations rose. The systems couldn't scale, and the pressure was mounting.

SOLUTION

Together, we broke down the monolith and introduced a microservices architecture that enabled faster releases, independent development, and better scalability.

eCommerce platform modernisation

We migrated the monolithic ecommerce system to a microservices-based platform with custom-built services, off-the-shelf integrations, and bespoke front-end applications. This enabled auto-scaling, reduced downtime, and supported 500,000+ concurrent users.

Warehouse transformation

We introduced a hybrid platform combining microservices, mainframe interfaces, and third-party automation kits.

Product systems optimisation

We replaced legacy product management tools with a cloud-native microservices platform. This enabled incremental delivery, reduced dependency on unsupported technologies, and improved visibility across workflows.

OUTCOMES

- 70% cost savings through reusable infrastructure and configurable architecture
- Lead time to market within 4-6 weeks for onboarding third-party brands
- 50% improvement in user satisfaction with seamless onboarding and minimal training
- 90% improvement in technology consistency across the estate
- 99.95% operational availability and 100% data durability for warehouse systems
- Enabled multi-tenant platform for third-party brands, unlocking new revenue streams and faster product availability
- Faster development and release cycles across ecommerce and product systems

"Ensono have been instrumental in modernising our warehouse systems. Introducing microservices has unlocked a roadmap to robotics that will supercharge our warehouse efficiency and provide an even better service to our customers. This new architecture has given us access to invaluable data insights that will help us learn, iterate and capitalise on emerging opportunities."

Review

We follow the GDS Service Manual's approach to agile delivery

Discovery

- A short (typically four to eight week) phase focused on understanding the problem to be solved: Researching user needs, agreeing business goals, detailing constraints, and identifying ideas to test at alpha.

Alpha

- Another short (typically six to eight week) phase focused on building prototypes and testing ideas, working with a small group of users or stakeholders.
- The objective of this stage is to get enough feedback on a prototype to determine whether to move on to beta.

Beta

- A phase focused on starting to build the best idea from alpha. An initial, private beta will involve a limited number of users to gather feedback to make improvements.
- Once we've done that and are confident that the service can operate at scale, we can move into public beta, opening up the service to everyone that needs it and preparing for live.

Live

- The focus of the live phase is to support the service on a sustainable, ongoing basis, continuing to make improvements, and iterating to take account of emerging needs.
- Success is measured against the targets agreed during the earlier phases.

Why Ensono?

- **Business outcomes first:** We focus on delivering better business results, not just technology solutions.
- **Vendor agnostic:** Independent advice backed by partnerships with all major cloud providers, without commercial bias.
- **Code less, deliver more:** We leverage existing technologies and prefer PaaS for hyperscale performance, risk reduction, and cost efficiency.
- **Proven delivery:** A decade of engineering excellence, supported by Ensono Stacks, our toolbox of tested approaches and automation.
- **Knowledge transfer:** We train and empower in-house teams for long-term self-sufficiency, with managed services available when needed.

Ensono has unique expertise, focus and flexibility

Capability & Commitment

With expertise in **AWS, Azure, GCP**, private cloud and legacy systems we excel in complex environments, helping our clients to **unlock their most valuable data and insights from mainframe to cloud.**

Outcome Focused

We focus on **your core business objectives** and outcomes with a **technology agnostic** approach, independent of vendors and point solutions.

Proactive partnership

We don't just reimagine your strategy, we roll up our sleeves and deliver our recommendations. Ensono is an **extension of your team, built around your needs.**

Ensono continues to be recognised for its technology, people and innovation

Security & Compliance Certifications

At Ensono, our **dedication to excellence** extends beyond industry accolades to include a steadfast **commitment to security and compliance**. Our certifications are a testament to the **rigorous standards** we uphold to protect and serve our clients with **reliability and trust**.

ESG Commitment

The Environment

We are reducing energy use and material waste through environmentally responsible management of offices and data centers. We have implemented programs that:

- Monitor air emissions
- Recycle cooling water and electronic waste
- Reduce energy consumption
- Ensure safe disposal of hazardous materials
- Use renewable and/or lower impact energy sources

2050 Net Zero Goal

Social Responsibility

By developing people in a diverse, equitable and inclusive workplace, we offer growth opportunities for associates and more innovative solutions for clients. Initiatives include:

- Unconscious bias training
- Tech Talent Charter (U.K. nonprofit)
- Ensono Academies:
 - Junior Academy for inner city youth
 - Ensono Mainframe & Cloud Academies
- Women Connected mentoring program
- Associate development, recognition and engagement programs

Governance

We are a trusted global MSP, serving clients throughout the world. Our code of conduct defines standards for a fair and safe workplace. Governance practices include:

- Board oversight of financial audits and reporting; technology strategy and investment; and compensation plans
- Annual compliance, privacy and data protection training for all associates
- Comprehensive Risk Management program
- Compliance with industry regulations
