Cyber Security Services

The challenge

Organisations today face an increasingly complex security landscape shaped by evolving cyber-attacks, hybrid multi-cloud architectures, expanding device estates, and growing regulatory pressure. As user identities, applications, data and infrastructure become more distributed, traditional perimeter-based controls are no longer sufficient.

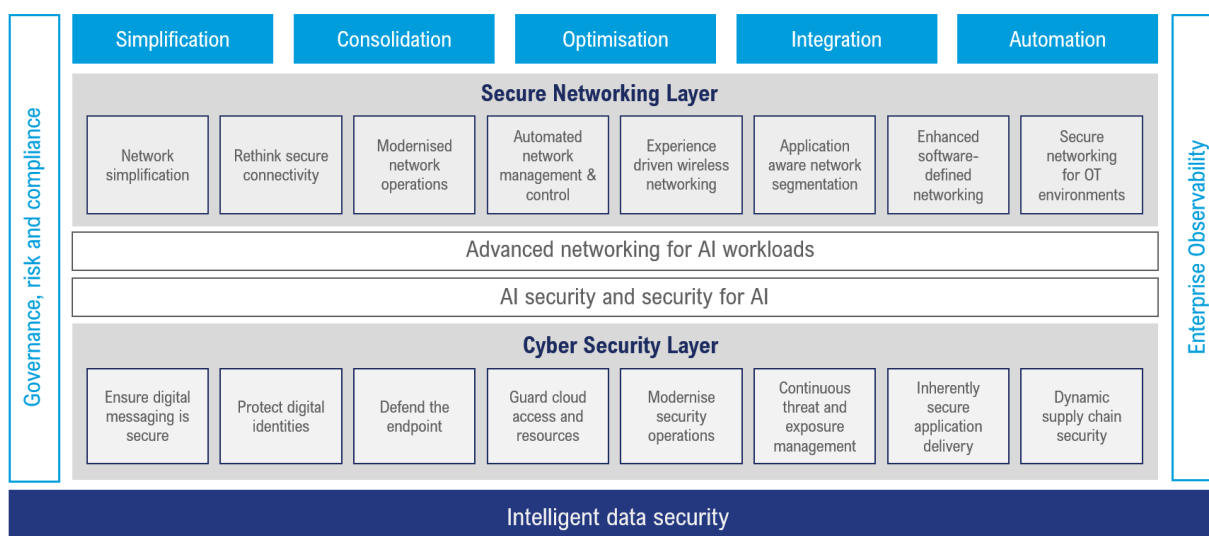

Security teams are expected to maintain high levels of protection while managing fragmented tooling, skills shortages, operational overload and the need to align with stringent standards and industry frameworks. Whether securing cloud environments, safeguarding identities, defending against advanced threats, protecting the workplace, or modernising infrastructure, organisations struggle to implement cohesive controls that can scale, integrate and adapt. This requires specialist expertise to interpret risk, optimise architecture, embed automation, and achieve consistent, measurable improvements across the security estate.

Service overview

Computacenter delivers comprehensive, end-to-end security services designed to help organisations build, operate and continually enhance modern security capabilities. Our portfolio spans advisory, design, deployment, optimisation and managed services across cloud security, identity and access management, workplace protection, infrastructure security, IT governance and compliance, and cyber defence operations. These capabilities are complemented by our networking services, which together enable our **Secure Connected Enterprise** approach, where networking and security converge to provide secure, reliable access to applications, data and services from any location.

We help customers establish resilient, integrated architectures, modernise legacy technologies, and embed advanced detection, response and automation platforms. Drawing on deep experience, long-standing vendor partnerships and proven methodologies, we support customers in strengthening policies, processes and technology investments to deliver scalable protection, improved visibility and sustained security maturity across the entire digital ecosystem.

The Secure Connected Enterprise

Cyber Security Services

Service detail

Solution Groups		Service Offerings					Adjacent/Embedded Solution Areas				
	Cloud Security		 IAAS Security	 CSPM Assessment	 CNAPP Readiness	 Cloud Security Compliance	 Cloud Security Runtime	Cloud & Applications	Data center	Networking	Workplace
	Identity & Access Management		 Identity Current State Assessment	 Access Management Design & Build	 IGA Design & Build	 Legacy to Modern PAM Migration	 PKI Management Design & Build				
	Infrastructure Security		 SASE / SEE Readiness & Implementation	 Zero Trust Network Architecture	 Hybrid Mesh Firewall Advisory	 Cyber Security Maturity Assessment	 Vulnerability management Assessment				
	Workplace Security		 Cyber Hygiene Assessment	 XDR Solution Implementation	 Endpoint Security Health Check	 Vulnerability management Review	 ZTNA Solution Design				
	OT Security		 OT Network Observability Design	 OT Network Visibility Assessment	 OT Network Security & Segmentation	 OT Vulnerability management Advisory	 OT Market Insights				

Why our customers choose us

To understand more about how Computacenter can support your organisation with Cyber Security services, please contact us at securityenquiries@computacenter.com.

Professional Services

Our people

12,500+
Services personnel

5,000
Engineers & Technicians

2,200
Project, Service &
Delivery Managers

3,700
Service Center Agents

14,000
Technical certifications

Our Professional Services capability

IT Strategy and Advisory Services

Helping our customers to make wise choices in a fast-changing technology landscape

- Technology Consulting
- Management Advisory

Transformation Services

Supporting customers with their change agenda through transformation projects and application services

- Technology Transformation
- Application Services
- ServiceNow Center of Excellence

Integration and Deployment Services

Implementing new technology for our customers across all solution areas, nationally and internationally

- Integration services
- Systems engineers and technicians
- Passive infrastructure

Expert Services

Providing our customers with access to certified and experienced professionals when required

- Resource on demand
- Squads
- Long-term teaming

Our Professional Services framework
