

COMPUTACENTER – CLOUD NATIVE APPLICATION PLATFORMS STRATEGY REVIEW & ROADMAP

GCloud 15 – SERVICE DESCRIPTION

Dec 2025

SERVICE DESCRIPTION – CLOUD NATIVE APPLICATION PLATFORMS STRATEGY REVIEW & ROADMAP

OVERVIEW

Service Description

Our Cloud Native Application Platforms Strategy Review & Roadmap is a strategic advisory engagement designed to modernise your infrastructure into a resilient, high-performance foundation for modern software. Targeted at solving the barriers to scale, we help address the complexity of managing Kubernetes, microservices architectures and distributed data. This service provides a comprehensive audit of your container orchestration, service connectivity, and cloud-native security posture. By aligning your infrastructure with Cloud Native Computing Foundation (CNCF) best practices and integrating AI-driven observability, we create a roadmap that ensures your platform is not just scalable, but cost-optimised and self-healing.

This service is delivered via several workshops and discovery activities, with the tailored outputs presented back in a documented format that the customer can share and communicate with IT and business stakeholders.

Key Features for our Customers

- Kubernetes & Orchestration Audit: Deep-dive into cluster configuration, networking (CNI), and resource management to ensure production readiness.
- AI-Powered Observability Integration: Implementing AIOps for predictive alerting and anomaly detection.
- FinOps & Cloud Unit Economics: Detailed analysis of workload costs vs. business value.
- Service Mesh Strategy: Designing traffic management and zero-trust security for microservices.
- GitOps & Continuous Delivery Design: Moving to a declarative "Source of Truth" for all infrastructure.
- Multi-Cloud/Hybrid Architecture: Designing for portability and disaster recovery across providers.
- Automated Scaling & Spot Strategy: Configuring intelligent resource rightsizing to lower spend.
- Policy-as-Code (Guardrails): Implementing OPA or Kyverno to enforce compliance automatically.

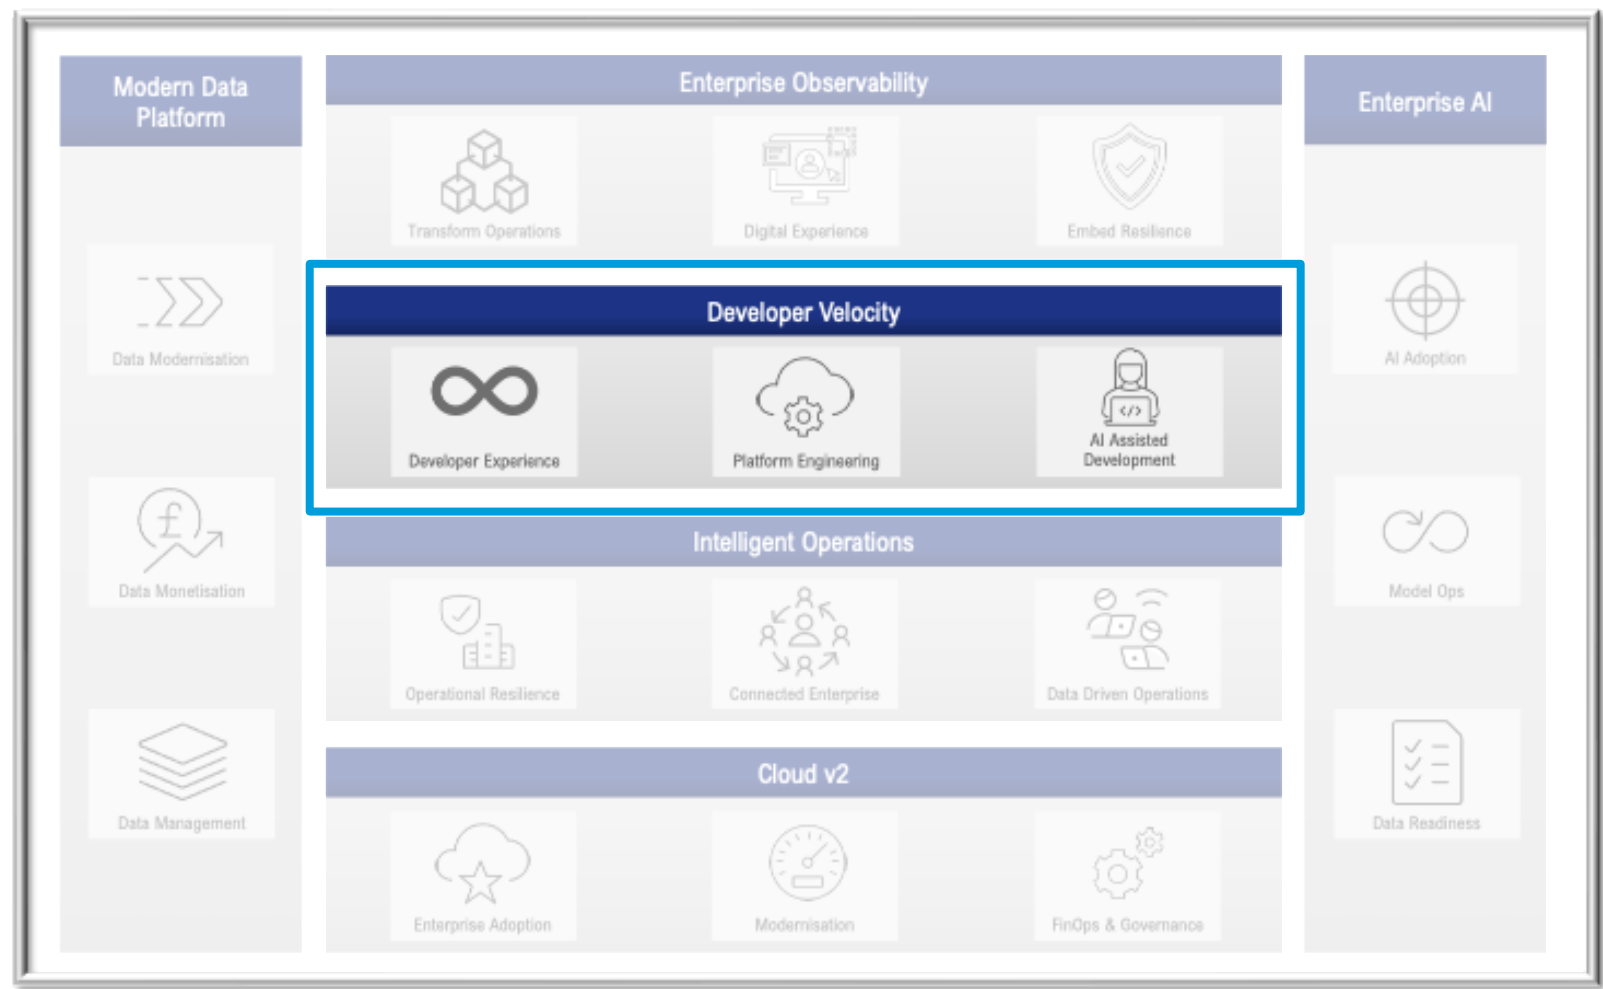

Key Benefit for our Customers

- Lower Infrastructure Costs: AI-driven rightsizing and FinOps practices reducing cloud waste.
- Enhanced System Resiliency: Self-healing clusters reduce the frequency and impact of outages.
- Seamless Scalability: The platform grows and shrinks automatically based on real-time demand.
- Hardened Security Posture: Security is "baked-in" via automated policies and container scanning.
- Simplified Compliance: Automated auditing makes SOC2 or PCI compliance much easier to maintain.
- Operational Consistency: GitOps ensures that the environment is always in its desired state.

SERVICE DESCRIPTION – SUPPORTING INFORMATION

Cloud & Applications services portfolio

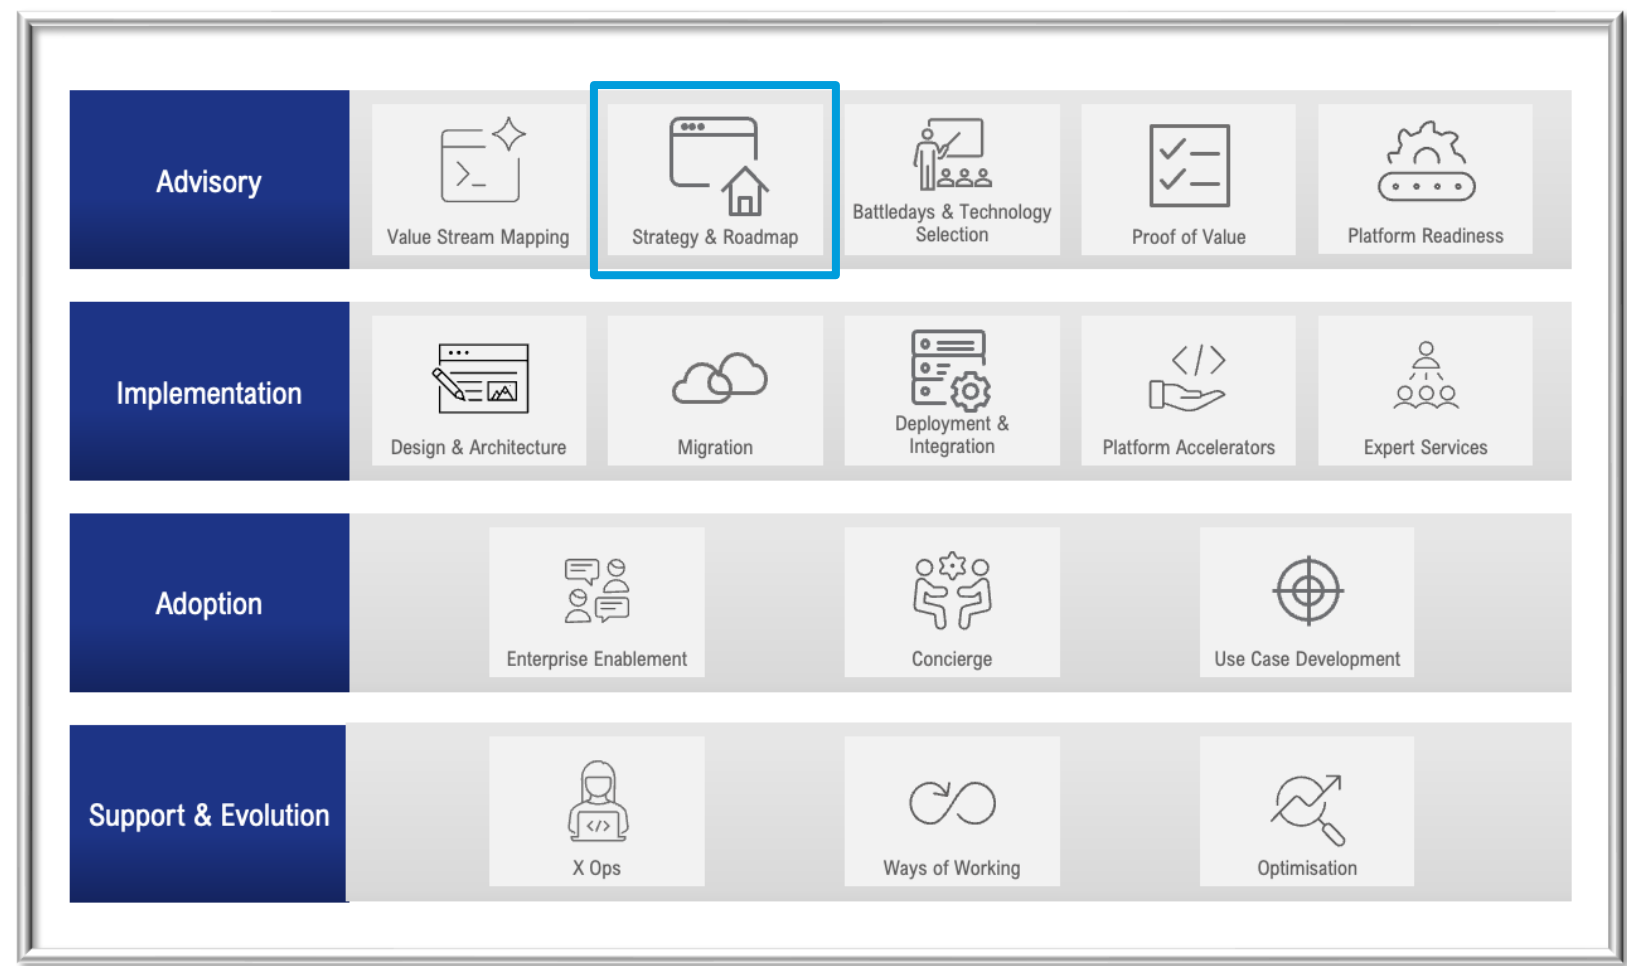

Our Cloud Native Application Platform Strategy Review & Roadmap service forms part of Computacenter's Developer Velocity solutions.

These solutions help customers to scale software delivery by improving developer experience, adopting platform engineering and leverage AI assisted development.

SERVICE DESCRIPTION – SUPPORTING INFORMATION

Cloud & Applications services portfolio

Integral to our Advisory services, it forms part of our wider service portfolio aimed at support our customers at every stage of their technology adoption .

When leveraged with our Values Stream Mapping, Technology Selection, Platform Readiness and Proof of Value services, customers are able to take critical first steps in Cloud Native Application Platform adoption with confidence and clarity.
