Networking Services

The challenge

Networks are now a critical platform for digital outcomes, underpinning cloud, AI, edge and modern workplace initiatives. However, many organisations are constrained by legacy architectures and operating models that struggle to deliver the agility, visibility and performance required in hybrid and distributed environments.

Complexity continues to grow as customers adopt multi vendor estates, programmable and open networking, advanced telemetry, and the convergence of IT, OT and cloud. Emerging capabilities such as AI native networking, agentic NetOps and next generation mobility offer clear benefits but also introduce risk when layered onto fragmented platforms and processes.

These pressures are intensified by skills shortages and expectations of improved user experience, automation and integration with security and platform functions. Without a modernised strategy, networks risk limiting transformation rather than enabling it.

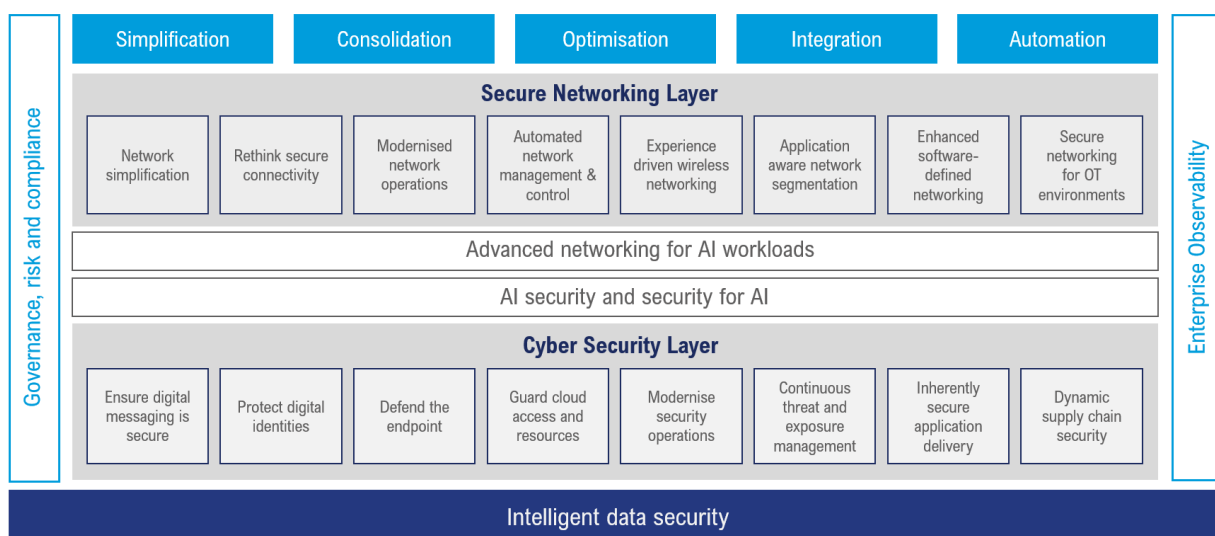

Service overview

Computacenter delivers end to end networking services that help organisations modernise and operate resilient, future ready network platforms aligned to business priorities.

Through our **Secure Connected Enterprise** approach, we unify campus, data centre, WAN, cloud, OT and AI era networking into a coherent, secure architecture. We support customers across the full lifecycle, from strategy and vendor agnostic advisory through assessment, design and deployment, to migration and ongoing optimisation. This spans next generation campus and wireless, SD WAN and SASE, data centre and hybrid cloud networking, Kubernetes networking and AI optimised infrastructures.

Our services are underpinned by observability, automation and AIOps capabilities, enabling data driven insight, operational efficiency and progression toward intent based operations. By aligning networking closely with security, we help customers realise a **Secure Connected Enterprise** that delivers secure, reliable connectivity, improved experience and a scalable foundation for growth.

The Secure Connected Enterprise

Networking Services

Our Networking portfolio

Visibility & Control	 Network Automation	 Network Monitoring & Management	 Modern Network Operation concepts	 Software Advisory & Implementation	Adjacent Solution Areas			
Access Network	 Secure Campus Fabric	 Wireless Access	 OT Networks		Security	Data Center	Workplace	
Interconnectivity	 WAN & SD-WAN	 Cloud Connectivity	 Service Provider & MAN					Cloud & Applications
Data Center & Cloud Network	 Modern Data Center Fabric	 Multi Cloud Networks	 AI Network Infrastructure					
Network Security	 Firewalling	 Network Segmentation	 SASE					
Physical Infrastructure	 Structured Cabling	 Documentation & Management	 Mounting & Deployment Services					
Technology Sourcing	 Procurement Services	 Configuration, lifecycle services	 Logistics Services	 Circular Services				
Managed Services	 Maintenance, field & managed lifecycle	 Remote user support & digital operations	 Managed Campus	 Managed WAN				

Why our customers choose us

To understand more about how Computacenter can support your organisation with our Networking services, please contact your Computacenter account manager.

Professional Services

Our people

12,500+
Services personnel

5,000
Engineers & Technicians

2,200
Project, Service & Delivery Managers

3,700
Service Center Agents

14,000
Technical certifications

Our Professional Services capability

IT Strategy and Advisory Services

Helping our customers to make wise choices in a fast-changing technology landscape

- Technology Consulting
- Management Advisory

Transformation Services

Supporting customers with their change agenda through transformation projects and application services

- Technology Transformation
- Application Services
- ServiceNow Center of Excellence

Integration and Deployment Services

Implementing new technology for our customers across all solution areas, nationally and internationally

- Integration services
- Systems engineers and technicians
- Passive infrastructure

Expert Services

Providing our customers with access to certified and experienced professionals when required

- Resource on demand
- Squads
- Long-term teaming

Our Professional Services framework
