## Property asset management consultancy, design, implementation and support

CDS provides consultancy, design, implementation, delivery and support for a wide range of case management and business process management challenges. We enable clients to visualise and move safely and securely to a future 'to be' state in pursuit of digital transformation and associated benefits across cost efficiency and improvement in user experience for both customers and employees.

By automating workflows and removing manual processes, we support our clients to realise operational efficiencies, increase assurance and auditability and create 'digital-first' services for users that can scale in line with organisational growth.

Meshing seamlessly into our wider digital proposition, business process management transformation consultancy leverages the expertise and experience of the agency to deliver improved outcomes for clients by building tangible roadmaps based on pragmatic, achievable and composable thinking.

Our services include, but are not limited to:

- Appian cloud solutions
- Business process management and transformation consultancy and implementation
- Case management cloud solutions
- Hyperautomation
- Low-code cloud solutions
- Low-code solution implementation and support
- Process automation cloud solutions
- Property asset management consultancy, design, implementation and support.

CDS has designed and developed several systems with significant cloud, Robotic Process Automation (RPA) and case management components, incorporating data capture, processing, workflow, multi-user views and reporting to support both operational activity and policy.

Examples include:

- Office of Government Property: Electronic Property Mapping and Information Service (ePIMS)
- Social Work England: cloud-based case management solution that supports key processes and integrates with government-as-a-platform services.
- Scottish Government: IT Procurement Database
- Independent Office for Police Conduct: case management system
- Metropolitan Police: Single Online Home: online crime reporting.

## Service overview

CDS provides a range of consultancy services for the implementation and enhancement of property asset management solutions, using the MicroStrategy BI platform. Intuitive dashboard reports provide insight into property estates and benchmarking capability. Bulk upload options, APIs, ETL and visualisation are delivered and assured by our expert technologists.

CDS' experience building data-centred services includes Office for Government Property's Electronic Property Information Mapping System, a data-centric solution that includes front-/back-end development and data visualisation. Fully functional REST/SOAP APIs, to e-Gov standards, allow public-sector organisations to upload core estate and property benchmarking data.

Data goes through validation and verification before being published into an operational database. From there, it is uploaded via ETL into a data warehouse. All dashboards and reports utilise this data warehouse, which acts as a single source of truth. The approach allows users to upload data with ease while the processing pipeline ensures consistent, standardised data outputs for visualisation.

## Features and benefits

### Features

- CDS is MicroStrategy's number one implementation partner for UK government
- We provide end-to-end services for delivering BI solutions
- Award-winning design and UX capability
- Engaging and interactive dashboard design
- ISO27001 certified for information security
- Responsive, device-agnostic solutions including mobile
- Support via ITIL and ISO20000 compliant Service Desk
- Quick and cost-effective deployment
- Expert training by MicroStrategy specialists
- Dedicated testing team certified to ISO20000 service management.

## Benefits

- Expert services from MicroStrategy's No. 1 UK government partner
- Designed to empower non-technical users to explore their data
- Our solutions deliver actionable analytics to drive change
- Start small and scale up based on effectiveness
- Secure handling of sensitive or personal data
- Our solutions can be accessed via browser, tablet and mobile
- Quickly see return on investment
- Quickly become experts in your own data
- Access efficiencies and realise savings
- Benchmark property data to inform planning.

## Business continuity and disaster recovery plans

CDS is committed to minimising and managing its exposure to disruption to the business and the services provided to our customers. This encompasses robust systems and processes necessary to maintain continuity of service and operations.

CDS maintains a comprehensive Business Continuity and Disaster Recovery (BCDR) plan, certified to **ISO 23001**, that defines clear roles, responsibilities, processes, and procedures for assessing and responding to disruptions to ensure continuity during disruptions. **Our plan is tested annually with lessons learned incorporated into plan improvements.**

Our Business Continuity Management System (BCMS) is underpinned by regular business impact assessments and threat and risk analyses, and annual tests to ensure all contingencies remain effective, current, and fit for purpose.

## Onboarding and offboarding

### Onboarding

CDS provides a tailored onboarding pathway, based on clients' individual requirements.

Onboarding is a collaborative process, through which we fully understand our clients' short-, medium- and long-term goals, and plan our service accordingly, to deliver best value and appropriate resourcing, governance, communication and planning.

Our multi-disciplinary agile teams will work with project stakeholders to understand the client and project needs and requirements.

We will define and capture ways of working, including definitions of 'ready' and 'done', and identify acceptance criteria for each sprint, underpinned by modern test practices and OKRs.

### Offboarding

Upon starting the engagement, CDS will provide an exit plan for client approval. This will cover matters such as knowledge transfer and documentation, roll-off schedules,

data and asset transfer, intellectual property and removal of access / permissions and return of devices / equipment.

Ownership of data contained in any solution belongs to and rests with the client; as the service is decommissioned, raw data will be transferred to the client. CDS is certified to ISO 27001 for data security and will always adhere to these standards – including data removal and destruction.

## Ways of working

At CDS we apply agile principles across our projects, primarily using the SCRUM Agile methodology. We operate multi-disciplinary squads that combine domain expertise with technical excellence, delivering value early and iteratively through two-week sprints. Our approach is underpinned by the following core practices:

- **Daily standups:** A team call for 15 minutes each morning to track progress, surface blockers and ensure sprint goals are achieved.
- **Sprint planning:** Held at the start of each sprint to prioritise the work, align on objectives and ensure the team is fully prepared.
- **Sprint review:** At the end of the sprint, the team demonstrate to all stakeholders the deliverables achieved and present the sprint goal for the next sprint.
- **Sprint retrospective:** For each sprint the team will review what went well, identify areas of improvement and embed lessons learned to drive continuous improvement.

Additionally, we have an Agile mindset and culture at CDS, in which we apply:

- **User-centred design and customer-focus:** Through collaboration and partnership working we deliver outcomes that meet user needs.
- **Adaptability and flexibility:** Short feedback loops enable us to respond quickly to change, with teams empowered to pivot as required.
- **Continuous learning:** Retrospectives encourage open, honest feedback to continually improve ways of working and delivery effectiveness.
- **Partnership and teamwork:** We create a one-team culture with our clients and their supplier partners, working collectively towards shared project goals.

## Training

As well as continual ‘on the job’ knowledge transfer to upskill client teams, CDS can provide formal, comprehensive training for administrators and users prior to handover and go live designed to support successful change management, ensure smooth implementation and embed solutions that are integral to business operations. Our training also builds internal technical capability, empowering teams to become self-sufficient and reduce the long-term cost of change.

In most cases, we adopt a ‘train-the-trainer’ model, delivered through a blend of on-site and remote sessions. This is supported by comprehensive training materials and

easy-to-follow digital end-user guides, written for non-technical audiences and compliant with WCAG 2.2 accessibility guidelines.

## Quality assurance and performance testing

CDS applies rigorous testing as part of our Quality Assurance process (ISO9001) to ensure we maintain quality across our deliverables and that outcomes are fit for purpose and fulfil functional and performance requirements.

Our testing capability is led by ISTQB (International Software Testing Qualifications Board) qualified testing experts with all the skills and expertise to quality assure AI, technology & cloud services.

We use a flexible, agile testing approach utilising tools and techniques tailored to each client's context to ensure solutions meet business objectives and success criteria.

We adopt an automation-first approach, embedding high-quality automated checks into robust CI/CD pipelines to ensure quality is treated as a first-class citizen throughout the deployment process.

Our testing services include:

- Test strategy
- Test planning
- Automated test frameworks
- Testing, defect management and reporting
- Support of customer UAT
- Security (perimeter/application) testing / DevSecOps
- Performance and stress testing.

## Security services

CDS holds certifications to international standards - Cyber Essentials Plus and ISO27001 Information Security, encompassing physical security, personnel security, storage, electronic data handling and secure destruction.

We embed 'secure-by-design' principles in our standard service design approach, aligned with security best practises and in addition we provide expert security consultancy.

CDS works closely with National Cyber Security Centre CHECK-accredited providers to conduct IT Health Checks (ITHC)/penetration testing in line with best practice.

CDS staff are BPSS cleared as a minimum. We can deploy SC, NPPV cleared teams and staff with DV clearance, if required.

## Ongoing support

Our service model is designed to provide comprehensive, proactive support that operates to

**ISO20000:2018 Service Management and ITIL best practices**, covering the full-service management lifecycle.

We deliver a fully managed service that encompasses application support, platform maintenance, incident management, problem management, change management, supplier management, and out-of-hours support for major incidents. This approach ensures that business-critical systems remain operational and performant whilst maximising customer value through continuous service improvement.

All CDS Service Delivery team are ITIL-certified.

We offer three service levels (Bronze, Silver and Gold) each providing:

- Online Service Desk Portal available 24x7 for logging and tracking incidents and requests.
- Telephone support via a dedicated helpline available from 9am to 5pm Monday – Friday (excluding English Bank Holidays).
- Highly skilled service desk team who manage and resolve incidents and requests in accordance with the agreed SLA.
- Ongoing maintenance including application of security patches.
- Structured change management to ensure updates are properly assessed, approved and implemented.
- Monthly performance report to provide visibility of service levels and operational metrics.

Support and maintenance contracts stipulate a minimum level of support provision per month, appropriate to the size and complexity of the service, aligned to the preferred service support tier. Additional time is chargeable at the day rates listed on the rate card.

## SLA Incident response

| Service                                        | Bronze         | Silver          | Gold            |
|------------------------------------------------|----------------|-----------------|-----------------|
| <b>Incident response</b>                       |                |                 |                 |
| P1 - To be called in                           | 15 minutes     | 15 minutes      | 15 minutes      |
| P2                                             | 1 hour         | 1 hour          | 1 hour          |
| P3                                             | 1 hour         | 1 hour          | 1 hour          |
| P4                                             | 4 hours        | 4 hours         | 1 hour          |
| P5                                             | 1 working day  | 1 working day   | 1 hour          |
| P6                                             | 1 working day  | 1 working day   | 1 hour          |
| <b>Target incident resolution - core hours</b> |                |                 |                 |
| P1                                             | 8 hours        | 6 hours         | 4 hours         |
| P2                                             | 15 hours       | 11 hours        | 8 hours         |
| P3                                             | 5 working days | 3 working days  | 1 working day   |
| P4                                             | 7 working days | 5 working days  | 3 working days  |
| P5                                             | N/A            | 14 working days | 10 working days |
| P6                                             | N/A            | N/A             | N/A             |
| Major Incident Report                          | N/A            | 10 working days | 5 working days  |

## Hosting managed services

CDS provides a range of consultancy and management services for design, implementation and management of application infrastructure, including:

- Technical architecture and implementation
- Infrastructure management and maintenance including:
  - Critical security patches
  - OS (operating system) patches: testing and deployment

- Application and platform availability
- Anti-virus & Malware updates
- Obsolescence management
- Proactive monitoring and alerting of Infrastructure & solution performance and function.

## Service constraints

Attainable service levels will be dependent upon the service performance of cloud suppliers within the service chain. Maintenance windows may apply, and clients should refer to the SLA for the specific service in use.

## Ordering and invoicing

We recommend contacting CDS before placing an order via G Cloud 15, to confirm and agree scope, scale, SLAs, KPIs, outcomes, etc. We will be pleased to support clients to define statements of work that reflect their requirements.

Invoices are issued monthly in arrears, with payment terms of 30 days.

## Pricing

Timescales and costs vary, depending on several factors; we recommend a preliminary review to provide a firm cost.

Please refer to our pricing document and rate card.

## Industry standards

CDS delivers all its services to internationally recognised standards. CDS is accredited to the following standards:

- ISO 9001 Quality Management System.
- ISO 27001 Information Security Management.
- ISO 20000 IT Service Management and IASME certified.
- ISO 14001 Environmental Management.
- BSI 1008 Electronic Information.
- ISO 22301 Security and Resilience (Business Continuity).
- ISO 45001 Health and Safety Management.
- ISO 10008 Evidential Weight and Legal Admissibility of Electronic Information.
- ISO 50001 Energy Management Standard.
- Cyber Essentials Plus.
- IASME certified.
- ITIL compliant service desk.
- PlanetMark Sustainability.

We comply with the Data Protection Act 2018 and UK GDPR regulations.
