

DevOps & Agile Transformation

Service Background

Overview: *What is Agile DevOps Transformation?*

- Simply put, both Agile and DevOps are designed to serve the customer:
 - Agile focusses on how to get features into your product that customers want.
 - DevOps focusses on how to get the software-based product to your customers.
 - In other words, Agile is the reason for frequent releases and DevOps is the mechanism to enable the frequent release cycle.

Challenge: *Why is it needed?*

- To stay competitive, organisations are faced with the need to operate and deliver software at a fast-pace with high quality, innovation and reduced time to market.
- An imperative that can be difficult to meet due to various challenges, including:
 - Existing legacy architecture and infrastructure with siloed business operations.
 - Inefficient software development lifecycles based on outdated organizational processes and technology.
 - Lack of close, collaborative working between technology and business teams.
 - Apprehension and even reluctance by teams to embrace new process and technologies.

Transformation Pitfalls: *Failure Reasons*

- We recognise that the transition to Agile DevOps will be disruptive and can often fail to meet its objectives for a number of reasons, including:
 - Taking a big bang rather than incremental approach.
 - Focussing on tools and technology only.
 - Trying to adopt a standard model not tailored for the organization's specific requirements and culture.

Agile & DevOps Transformation

Our Approach

Our Services: *How we can help*

- Our Agile and DevOps transformation service is centred on providing the right people to enable organisations to implement and mature their Agile and DevOps culture and practices.

Agile Transformation Service

- We take a holistic approach to account for all aspects of your operating model with our services covering support for your vision, roadmap and strategy and transforming this into operational reality across culture, people, process and technology.
- Our services is applicable for any transformation size from a single team through to enterprise-wide Agile transformation.

DevOps Transformation Service

- We focus on the design and deployment of a full end-to-end Quality Engineering lifecycle, from automated deployment through DevOps practices.
- The target of our DevOps Transformation service is to embed quality and testing as part of your product delivery.

Service Features

- Customised transformation roadmap for your needs
- Tailored for any level of maturity
- Transform processes and people using Agile & DevOps practices
- Leverage proprietary and open-source tools
- Agile & DevOps Trainings & Certifications
- Business case definition
- Leverage test automation

Business Benefits

- Faster software delivery to keep up with end user wants
- More frequent release cycles
- Enable cross-functional teams
- 'Shift left' - Test earlier to detect more faults sooner.
- Reduce costs against more traditional methods
- Maximise the opportunities from CI/CD
- Delivery better quality digital products

Why Infuse

Experience and Credibility

Established in 2002 with over 21 years of experience in software delivery and quality engineering consulting having helped successfully deliver over 500 projects around the globe.

Public Sector Specialists

We have successfully deployed IT services on over 100 public sector engagements, so we understand your business drivers and ways of working and business challenges whether that be Education, Transportation, Central Government or Local Government

Multi-disciplinary Team

We leverage experts across our practice to provide you with an end-to-end delivery capability from experienced test managers to scrum masters, agile coaches, architects, developers, and manual & technical testers.

Test Expertise & Team Integration

All our resource are ISTQB foundation certified and bring expertise in testing together with experience and energy to quickly integrate with your existing team. We have a history of enhancing existing test teams to accelerate progress and are comfortable delivering within and managing a mixed team including in-house, contractor and third-party resource.

Highly Motivated & Delivery Focused

Our team are highly motivated and delivery focused, and will go above and beyond expectations to ensure the successful delivery of the test workstream. We have demonstrated our commitment to success on numerous previous test engagements.

Competitive Delivery Model

We effectively deploy resource onsite, onshore and offshore on many of our engagements. Our experience of delivering from multiple locations provides you with a cost competitive proposition together with the ability to flex resource when required.

Technical Innovation

We have expertise across a wide range of innovative products from our own script-less test automation tool – useMango™ – to leading enterprise and open-source tools, through to our delivery accelerators.

Company Overview

Who We Are

- We are a team of 100+ engineers and consultants spread globally with a passion for modern software design, engineering and delivery.
- We possess deep expertise across Architecture, Agile, DevOps, Cloud Transformation, Quality & Performance Engineering.
- Since 2002, we have been helping companies of all sizes design, develop and deploy high quality software.
- Since 2018, we have been focused on supporting HEIs resolve their technology challenges as part of their digital transformation and cloud migration agenda.
