

Civica DriverCare

DVLA Driving Licence & Vehicle Checking

Providing essential checks for drivers and fleet

DriverCare is our cloud-based driving licence and vehicle checking system. It runs from a web browser with direct links to the DVLA to check licences and vehicle details, road fund and MOT certificates. The software is used by companies who have employees driving both private and company vehicles. There is the additional option to upload insurance certificates for checking as well. This completes your duty of care to your employees confirming they have the correct level of business insurance for their role.

Why choose Civica DriverCare?

The web application offers full mobile support, optimisation for mobile and tablet browsers. The software version is the same for all organisations, but there are some functionality switches available and labels on screen can be updated to terminology used within your organisation.

Additional Information

As we can extract information from DriverCare we can also upload information, this is particularly useful for users, and vehicles etc. We will work with you to specify an upload or inbound interface from your external systems into DriverCare. We have a lot of experience with other clients and our full set of inbound interfaces to ESR.

It is important to us that your setup is right for you and your users. All the areas of setup within the system have administration screens, this means that there is complete flexibility of change at any time.
