

SIMPLIFY YOUR OT CYBER COMPLIANCE

Complex and in-depth OT compliance processes can be simplified with Profile™

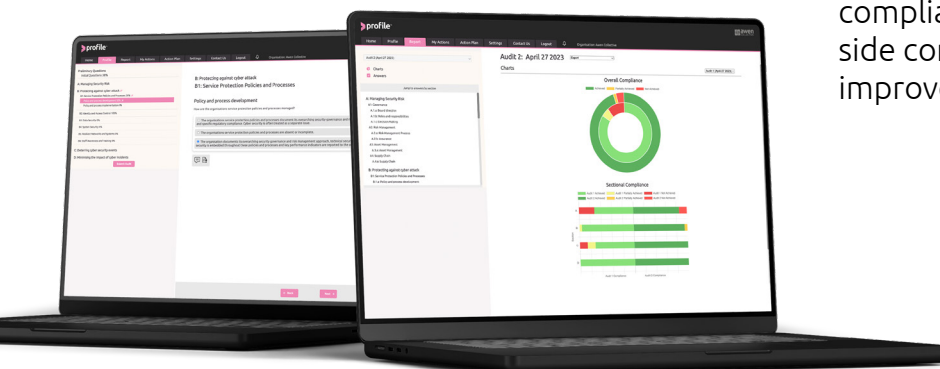

OT-utilising organisations are often under more regulatory pressure when it comes to cyber security, especially those operating critical national infrastructure. Complex and in-depth compliance processes can be simplified with **Profile™** - walking your stakeholders through data gathering, auditing and reporting against the **Cyber Assessment Framework (CAF)** under the **NIS Directive** and **GovAssure** scheme; HSE's **OG86** requirements for Higher Tier **COMAH** sites; and meeting the requirements of international standards including **IEC/ISA 62443**.

Break it down: Profile™ poses a collection of multiple-choice questions to help you easily deduce your current level of compliance to the component parts of the regulation/standard – no more Excel spreadsheets!

Collaborate: Answering compliance questions usually involves several stakeholders across an organisation – easily work together on answers with real-time user tracking, comments and notifications on changes

Next steps: Once data gathering is complete, Profile™ will provide recommendations for improving compliance and generate an action plan you can assign to stakeholders for continuous improvement.

Report your results: Profile™ provides easy visual reporting with graphs of key compliance metrics, enabling simple side-by-side comparison between audits to highlight improvements.
