

SAS Viya Workbench speeds coding and analytics with a self-service, cloud-native environment. Get compute in seconds, work in SAS, Python, or R, and integrate with your favourite tools. See how you can experiment, iterate, and deploy faster.

SAS® Viya Workbench on G-Cloud

SAS Viya Workbench is a cloud-based compute environment that empowers developers, data scientists and modellers to easily conduct data management, analysis and model development using SAS, Python or R through Visual Studio (VS) Code, Jupyter Notebook or SAS Enterprise Guide interfaces. With Viya Workbench, developers are up and running in the cloud in seconds. Most SAS9 procedures and Viya multithreaded procedures are available. The algorithms tested in a performance study of Viya, which were 30x faster than the competition*, are the same algorithms running in Viya Workbench.

Solution Fee by Offering	Price
Per user / year	£4,845

SAS Viya Workbench is priced on a user basis and as an annual hosted license fee payable in advance. Microsoft Azure or AWS costs will be incurred by the deployment. The Cloud infrastructure is sized based on the volume of data loaded into the system, the number of concurrent users accessing the system and the type of analytical workload that is running. During initial discussion, SAS system sizing's will be made available for review and validation against requirements. Should requirements sit outside of these parameters, SAS and the customer will participate in a discovery exercise to identify and undertake the appropriate activity to re-size and recalculate costs based on the output of the exercise.

Our teams know how to get the most from the SAS Platform. With experience acquired across public, financial, health care and commercial sectors, they are familiar with common regulatory compliance requirements

Similarly, each of our Public Sector customers is different, and will have differing requirements for analysis and reporting. Analysis and reporting capabilities are not provided out of the box and require customisation. This can be done by the customer themselves based upon training by SAS. Alternatively, SAS offers tiered customisation service bundles to build capabilities into your delivery based on your requirements. A blend of SAS and internal customisation can also be supported.

Fees exclude VAT

- Fees based on UK usage only.
- Cloud managed service pricing does not include audit and user log streaming capability which will be priced separately subject to data volumes and number of users.
