

GOT PHISH?

TRAIN YOUR EMPLOYEES
WITH PHISHING SIMULATIONS

What are Phishing Simulations?

Phishing simulations are controlled tests that mimic real-world phishing attacks. They help train employees to recognise and report malicious emails, websites, and phone calls.

86% of organisations have experienced a phishing attack. Phishing is one of the most successful, and easiest forms of cyberattack for criminals to carry out and many organisations are coming up short when protecting against modern email threats.

Phishing attacks target human, rather than technical, vulnerabilities and the consequences can be severe to an organisation, data and users.

Whilst many cybersecurity professionals are aware of common email threats like phishing, it's important to also consider the increase in sophisticated attacks such as spear phishing, business email compromise, and other inbound threats.

WHY RUN PHISHING SIMULATIONS?

- Raise security awareness among employees.
- Identify susceptible users that require more training.
- Teach employees how to identify and handle phishing attempts.
- Reduce risk of employees falling victim to real phishing scams.
- Meet compliance requirements for security awareness training.

WHAT ARE THE KEY BENEFITS OF PHISHING SIMULATIONS?

By participating in Phishing Simulations, employees play an active role in protecting the organisation through enhanced threat awareness and readiness. Phishing Simulations provide:

- Highly realistic phishing email templates designed by experts.
- Detailed reporting highlights vulnerabilities and training gaps.
- Customizable scenarios based on latest real-world techniques.
- Post-simulation debrief reinforces learning objectives.
- Ongoing campaigns keep employees vigilant over time.

WHY DO REGULAR PHISHING SIMULATIONS MATTER?

- **Proactive Defence:** Phishing Simulations help train employees to recognise and report suspicious emails before real attackers target them. It's ongoing training that uncovers human risks.
- **Risk Mitigation:** By identifying vulnerable employees through simulations, you can provide additional education to prevent them from falling victim to real phishing scams.
- **Compliance:** Many regulations and standards require regular security awareness training, including Phishing Simulations, to ensure employees understand cyber risks.
- **Data Protection:** Phishing is a top attack vector for malware and data breaches. Simulations help keep your organisation's sensitive data more secure.
- **Cost Savings:** Preventing even one successful phishing attack can save organisations from major financial losses and recovery costs.
- **Employee Awareness:** Regular Phishing Simulations inoculate your workforce against ongoing threats. Consistent training keeps security top of mind for employees and better protects your organisation.

WHY STONE?

Working with qualified providers ensures compliant, effective phishing awareness training tailored to your organisation's needs. Consistent simulations keep employees vigilant against phishing attacks.

When it comes to phishing simulations for your organisation, it pays to work with qualified professionals.

- **Compliance Matters:** Trust our CREST and Cyber Scheme certified providers.
- **Qualified Professionals:** For simulations, choose experts. NCSC recommends CHECK scheme certified providers for government entities and CREST/Cyber Scheme certified providers for non-governmental organisations.
- **Peace of Mind:** Our team complies with industry standards, ensuring legal, ethical, and high-quality phishing simulations.

Contact us today to discuss phishing simulation services for your organisation. Our experts can help inoculate your employees against the ongoing threat of phishing.

We offer flexible payment plans, including bespoke subscription models to suit your budgetary needs and one-off payments for cybersecurity services.

DON'T WAIT FOR A BREACH – proactively train employees to recognise and report phishing. Contact our certified phishing simulation experts today to get started!
