DIGITAL MARKETPLACE G-CLOUD 15 – CLOUD SOFTWARE-PRICING FOR PUBLIC SECTOR ENTITIES ONLY

D&B DATA CLOUD PRODUCT AND PRICING OVERVIEW

The Dun & Bradstreet Data Cloud provides access to over 620m global businesses with associated data such as business family trees, (hierarchy), financial risk, ultimate beneficial ownership data and much more.

The access to the data using the D&B Data Blocks for the for many use cases, such as:

- Mastering of business data – e.g. create a single source of truth across the business data landscape
- Business data verification for onboarding records
- Supplier data management
- Third-Party compliance checks
- Risk review and management
- Keeping data up to date to comply with GDPR requirements
- Improve user workflows both internal and external

The Blocks of attributes can be accessed via an API, or via a batch method, or using one of the data sharing platforms such as Snowflake or Databricks. Customer data can be provided to D&B in bulk for matching and assigning the DUNS number, to allow for further enrichment for the many uses as above.

The data blocks available are defined in the service definition.

This D&B data cloud helps you to create a single source of truth on partner, suppliers, business users, across procurement tools such as Jaggaer or Atamis, CRM, MDM, ERP and AP platforms, by leveraging the Master Data capabilities of our Live Business Identity, anchored by the Dun & Bradstreet D-U-N-S® Number.

Use contact data, firmographics, corporate linkage, financials, risk scores (including fraud risk) and predictive analysis for the foresight your company needs to uncover opportunities and evaluate risks.

Submit and receive files through multiple delivery methods, including the Web and STP, cloud data sharing platforms as well as customising the output to suit your needs.

Product pricing is shown below and is based upon:

1. Number of base records to match to and update/or to access.
2. The levels of data blocks – D&B Data Attributes are made available in blocks by relevant use case. E.G., Financial Risk. The higher the level number the more data attributes will be provided, as per the Company Information detail below:

Company Information

Provides basic data about a company, including name and address, industry/business activity type, size, and country/region identification numbers.

- **Level1** - Basic information about a company primarily used to validate the Match found in Company Entity Resolution such as Business Name, Primary Address, Telephone, Web Address and Primary Industry Codes. This Level is required as it is the starting point for all data block licenses.
- **Level2** - Additional information on a company including Sales, Employees, Industry Codes, Mailing Address and other information.
- **Level3** - Information on a company's competition, editorial information and Assignment Model data.
- **Level4** - Country specific data elements that are considered of higher value and pertain to the organization. Currently specific to the Japanese market and includes primary supplier and customer names and D-U-N-S Numbers.
- **Advanced Geoposition** - More precise latitude and longitude for pinpointing where a business is located. This side block is available for the Public sector only.

3. Required access to the data per use case. E.G., if you are using the data for one use case such as supply chain needs but then wish to use the same data for a website to look-up and verify the business logging in – this will be classed as an additional use case, in this case identity verification. The use cases are 5 in total with relevant use case discount structures.
