

Cyber Security for Safety

Service Category: Security Services, Cloud Support Services

About Our Service

Our globally recognised experts help you understand the safety impacts of cyber-security. We are leading the implementation of cyber-security for safety in the defence domain; we support our clients to understand their regulatory requirements, e.g. Defence Standard 00-970, and provide guidance and templates for generating compliant cyber-security for safety assessments.

Service Features

Development of a relevant cyber-security related Security Management System

We focus on helping you understand your cyber-safety requirements

Provide credible and authoritative cyber-safety assessments and safety cases

Provide cyber security risk assessments for previously developed systems

Development and understanding of security requirements

Access to our trusted system-based cyber-safety assurance approach

Bespoke verification frameworks delivering trusted cyber safety-related systems & components

Producing standards-related gap analysis, impact assessment and gap closure reports

Provision of bespoke or off-the-shelf training courses in cyber-safety assurance

Provision of guidance and templates for cyber-safety compliance

Service Benefits

Helping build confidence in the cyber-aspects of your safety-critical systems

Assistance in developing relevant, maintainable and readable safety documentation.

Clear roadmaps and action plans to address any identified shortfalls.

We work with your people thereby improving your capabilities.

Clearer understanding of what is required to assure your system

Helping make the transition from non-safety to safety-related product development

Expertise in all types of systems across many industry sectors

Fully independent provision of open and constructive advice and support

Ability to communicate cyber security risk to the end user

Making what can be complicated customer requirements clear and understandable

Detailed Service Definition

Cyber-security for safety is a novel field which aims to understand the safety impact of cyber-security risks.

Frazer-Nash is providing thought leadership in this novel and emerging area, supporting our customers to understanding the safety impacts of cyber-security risks, providing guidance and templates for compliance and leading its implementation in this novel field.

Our emphasis is on future and emerging systems that incorporate non-traditional aspects.

Detailed Service Definition (continued)

We provide:

- Cyber-security safety design assurance.
- Cyber-security supplier capability evaluation.
- Cyber-security safety certification strategies.
- Development of cyber-security and safety management systems.
- Development and delivery of cyber-security safety arguments and safety assessments.

Why Frazer-Nash Consultancy?

Frazer-Nash Consultancy is an independent engineering and technology consultancy with over 35 years' experience delivering high-quality digital and cloud-enabled solutions. We support organisations operating in complex and regulated environments through our collaborative approach and deep expertise in digital engineering, software development and systems integration.

We are **solution and technology-agnostic**. We assess our clients' requirements and provide impartial advice and design solutions based solely on their needs. This independence enables us to select the most appropriate cloud technologies and architectures to deliver secure, resilient and value-for-money outcomes.

Our cloud solutions are informed by experience gained across multiple platforms, sectors and use cases. We combine proven engineering discipline with a strong understanding of integration and whole-system design to support and enable cloud adoption while managing risk and ensuring long-term sustainability.

Our Commitment to Quality

Frazer-Nash is committed to delivering consistently high-quality services and outputs that **often exceed customer expectations**. Quality is embedded throughout our ways of working, from engagement and communication through to delivery and assurance.

We actively monitor progress using our robust, proportionate controls, ensuring key decisions are subject to appropriate challenge. Each project is allocated a dedicated Project Manager, a Project Supervisor who independently reviews and approves monthly reports, and a Project Auditor for ongoing quality assurance.

We ensure accuracy and suitability for purpose of all deliverables, with independent verification by two reviewers. Our Quality Management System is certified to **ISO 9001 and TickITplus** (for software development), providing customers with confidence that our quality standards are externally assured and continuously maintained.

Our Security

Frazer-Nash operates robust security processes and controls suitable for handling sensitive and classified information **above OFFICIAL** up to and including **Top Secret**. Security is embedded across our people, processes and systems, ensuring information is protected throughout delivery.

We support sensitive and critical programmes across government and national infrastructure by applying strict information-segregation controls, including team separation to address security, or conflict-of-interest considerations

All 1500 staff hold **BPSS clearance as a minimum**, with the majority cleared to **SC** and over 225 consultants holding **DV clearance**.

Our IT systems are certified to **ISO 27001 and Cyber Essentials Plus**, providing assurance that information security risks are proactively managed in line with recognised industry standards.

Our Approach to Subcontracting

Frazer-Nash primarily delivers services through our large base of permanent staff, supplementing this capability where required with trusted partner organisations to provide additional flexibility, specialist expertise and scale while retaining full delivery control.

We are experienced in engaging and managing subcontractors across the full project lifecycle, ranging from sole traders to large multinational organisations. Our structured approach ensures the right supplier is selected for each requirement and integrated effectively into the delivery team.

Our subcontracting processes focus on robust supplier identification and assessment, clear definition of scope, appropriate flow-down of contractual terms and conditions, and proactive risk management. All subcontractors are subject to proportionate commercial and technical due diligence to ensure they meet our standards for security, quality and delivery, enabling us to deliver outcomes on time, within budget and to the required quality.

Resourcing

Frazer-Nash employs over **1,500 technical specialists** across all grades, from **Follow to Set Strategy**, providing depth, continuity and scalability across a wide range of disciplines, backgrounds and experience levels.

To support agile and flexible delivery, our people are organised into defined **technical delivery areas** (including Information Systems, Cyber, Modelling and Software), which are deployed across multiple sectors such as central and local government, policing, health and energy. This structure, combined with strong portfolio, programme and project management (P3M), enables us to actively monitor demand and adapt resourcing throughout the project lifecycle.

We deliver complex requirements efficiently, consistently and at pace by forming tailored, multi-disciplinary teams led by a single accountable Project Manager.

Our consultants regularly work across different sectors, enabling us to cross-pollinate ideas, tools and best practice between domains. Drawing on in-house expertise, such as information security and human factors, we ensure effective and responsive delivery for every client.

Our Commercial Approach

Frazer-Nash adopts a flexible and transparent commercial approach to ensure best value and a model that aligns to each client's specific requirements. We collaborate with customers to clearly define the scope of services and agree a commercial structure that is predictable, proportionate and aligned to your required outcomes and effective delivery.

Depending on the requirement, this may include a **fixed-price model for clearly defined scopes**, or **time and materials using agreed day rates** where flexibility is required to accommodate evolving needs.

For longer-term or ongoing service requirements, and where we have control over resource flexibility, we can also offer a **single blended day rate** covering a range of grades. This provides simplicity, transparency and ease of management while maintaining access to the appropriate skills at the right time.
