	Enhanced Support and Maintenance Programme

What's included in the Creator Subscription?

Functionality Description	Feature	Description
Dedicated single MS Azure tenant (UK/EU/US)	Security	Provision of a single tenant in either UK, EU or US. Access to the application is via a dedicated url <orgname>.sharpcloud.com. Data is physically separated from any other organisations data as the database is separated for every customer
Single Sign-On (SSO)	Security	Using OpenIDConnect (Azure Active Directory) or SAML V2 - Existing Identity Provider (IDP) is used to provide user authentication to the SharpCloud platform
Basic Connectors (Excel and Clipboard)	Data Connectivity	Ability to easily import data into a story through file upload e.g. Excel or cut and paste into the datagrid
Basic API (read / write)	Data Connectivity	Access to SharpCloud REST API for simple read\write operations against a single story at a time
.Net SDK	Data Connectivity	Access to the SharpCloud .Net Software Development Kit that enables organisations to develop their own integrations with SharpCloud
Enterprise Publishing	Collaboration	Share stories in a read-only form with any user in the organisation even if they haven't explicitly been assigned a SharpCloud subscription.
Forms	Collaboration	Create forms to create or edit items within the SharpCloud story including ability to share this to anonymous users via QR code \ URL
Teams & Directories	Collaboration	Teams and Directories allow you to organise your stories into groups and also set some access permissions to members of the team or directory rather than requiring Stories to be explicitly shared. By creating stories in teams, ownership can be more easily transferred should that also be required when for instance the owner of a story has left the organisation.
Story Archives	Security	The History tab under Story set-up allows you to take a snapshot of the story at a point-in-time and retain the Story as an Archive. Archive stories are always read-only even to the Story Owner unlike just taking a copy and can be used to compare current and previous state of the items.
Enterprise API (read, with aggregation)	Data Connectivity	Access to SharpCloud Enterprise REST API (API v2). This Read Only REST API can be used read data across a set of connected (enterprise) stories and helps enable aggregation of data in conjunction with tools such as QueryConnect.
Query Connect (Desktop Tool)	Data Connectivity	QueryConnect is a desktop utility tool provided by SharpCloud that allows for integration with other On premise and Cloud applications and to update one or many SharpCloud stories. Connections can be grouped in folders and published to create a batch that can then be scheduled for execution using the Windows Scheduler.
Connected Stories (Enterprise)	Solution Building	Connected Stories, often referred to as SharpCloud Enterprise, allows for larger and more complex solutions with inter-related stories and the use of templates to enforce consistency.
Basic Widgets	Solution Building	The SharpCloud basic widgets are available in the Widget Story and also when adding a new Widget View from the add new view dialog. Basic Widgets provide some additional viewing options such as line charts and alternative bar charts.
