

Onsite Testing Service

Edge Testing Solutions Ltd trading as Resillion ensures that we can respond to client needs for testing support as part of our overall solution providing individual testing professionals and teams. This covers the full testing lifecycle including test management, system testing, user acceptance, regression testing, performance testing, usability and accessibility or test automation. Our expert practitioners are used to working across different platforms and development methodologies including waterfall, iterative, agile and DevOps. We provide flexible delivery models to support clients' specific requirements and optimise efficiency and effectiveness including the drive to shift left. This includes the following capabilities:

Test Governance and Test Management

Ensuring that the necessary quality controls are in place within the testing process to meet your overall quality management requirements. We provide test management from project initiation through to implementation covering planning, preparation, execution, reporting and testing sign off.

Early Lifecycle Testing

It is widely accepted that it is less expensive to detect and repair a defect early in the lifecycle as in line with our ethos of 'prevention before cure'. As such Resillion provides solutions employing static testing techniques covering the following:

- Requirements testing –using our 8-point check all requirements are tested
- Reviews, inspections and walkthroughs –validation of functional specifications and any detailed design documents to ensure that they have successfully captured the business requirements but also detail a feasible solution.

System and System Integration Testing

Resillion manages and delivers this key phase to verify the system as a whole, looking at both functional and non-functional testing (which includes usability and accessibility, cross-browser testing, data migration, failover and backup and recovery). This in turn ensures that the deliverables from development meet the functionality as specified.

User Acceptance

Resillion can provide support to you for User Acceptance by initially helping you with the strategy, management and approach. We can support the planning and scheduling of environments and resources, script preparation, data identification and test execution as well as liaison with development teams. We also provide mentoring and guidance to your User Acceptance teams.

Business Readiness

Ensuring business readiness is a key element of project and business implementation. This includes sign off of User Acceptance, business user training, setting up the live environment, planning and executing the implementation approach (including data migration or set up) and ensuring that audit, sign off and contingency planning is in place. Our collateral provides a baseline for establishing your

specific Business Readiness and Implementation Strategy and supporting the definition of project specific requirements.

Performance Testing

Our approach is to provide a comprehensive performance testing capability to ensure that your systems meet their stated requirements. Our performance testers are involved with your team to advise on the approach, define the scope and objectives, plan and manage the performance testing, as well as scripting, executing and analysing the results. The process is supported by use of best-of-breed tools and we have extensive experience with all commercial and open source tool sets.

Test Automation

Based on a Return-On-Investment (ROI) approach, we understand what should and more importantly what should not be automated. Our experience in a wide variety of different toolsets has enabled customers to realise the benefits of test automation in a controlled and structured manner. With the introduction of AI bolt-on tools we are now able to expand the coverage and maintenance of test automation suites reducing the need for costly in house expertise.

Pricing

The pricing model adopted for each engagement is based on the specific project requirements and can be delivered on either a time and materials or fixed price basis. Please see the attached Pricing document.

About Resillion

Resillion is a global quality engineering and cyber security partner from initiation to launch, with best-in-class technologies, leading solutions, and industry recognised services to support our clients throughout the digital lifecycle. By leveraging the latest technologies, an innovation-first mindset, and industry best practice, we are advocates for staying ahead of the competition and achieving strategic objectives.

The company delivers end-to-end solutions to support clients throughout their strategic digital initiatives offering a holistic offering across software and hardware.

Thanks to an invaluable pedigree across multiple different industries, we are proud to partner with leading brands to resolve issues and provide quality driven outcomes. We empower our clients from the world's leading organisations within the Public Sector, Media, Energy, Healthcare, Finance, and B2C industries amongst others, to deliver measurable business value and unleash their full potential.
