

Elevate your software quality with a QA Assessment

In the dynamic landscape of software development, there are constant challenges that disrupt efficiency and compromise quality. Chief among these hurdles is the struggle to maintain optimal code quality against the pressure of tight deadlines and changing requirements. This often increases the risk of bugs and makes maintenance more complex. Secondly, unclear or shifting specifications can derail projects and have a negative effect on customer satisfaction. Finally, limited testing practices and test coverage can leave you vulnerable to undetected defects and performance issues.

Our solution

A **Quality Assurance (QA) Assessment** and review of software delivery performance can quickly provide you with the insight and tools you need to streamline processes and prioritise quality assurance throughout the software development lifecycle. Taking swift action as a result of the assessment can lead to improved software reliability, enhanced user experience, cost savings and give you a competitive advantage in the market.

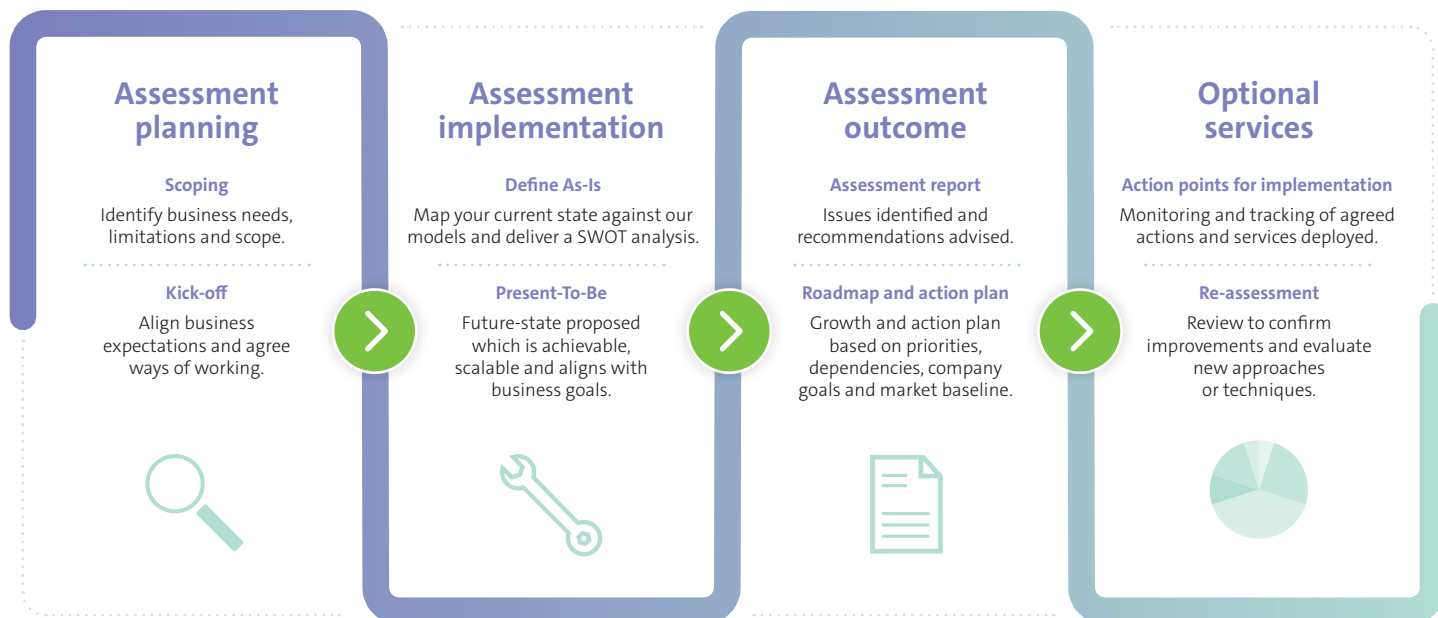

Key features

- **Tailored QA strategies:** We customise our QA strategies to align with the unique needs of your business.
- **End-to-end excellence:** Our in-depth analysis and evaluation begins right from the initial requirements analysis and continues through to post-deployment support.
- **Advanced automation solutions:** Our detailed knowledge of automation solutions not only speeds up the testing processes but also enhances the overall reliability of your software.
- **Market comparison analysis:** We benchmark your software against industry leaders, competitors using DevOps Research and Assessment (DORA) metrics, to provide insights into where you stand in the wider market and assess your performance.
- **Maturity mapping framework:** We assess your current maturity level and create a roadmap for improvement, guiding you towards higher levels of efficiency, reliability and innovation in your QA processes.
- **Industry standard models:** Our assessments are based on well-respected industry standards and models such as TPI, TMMi, ETAMMi, ISO9001, ISO27001.

Our approach and ways of working

At Resillion, we'll guide you through an effective QA assessment based on your individual requirements and help you develop a QA roadmap for the future. Using appropriate processes and best practices, you'll be able to embed QA into the heart of your organisation.

Our approach offers huge flexibility to ensure you get the tailored assessment you require. In addition to our core service, we also offer a set of in-depth reviews focusing on specific improvement areas such as shift-left, shift-right, test automation and continuous testing, non-functional testing, data-driven quality assurance and AI-enabled quality assurance.

Ask us for more information on our extended quality assurance assessments.

Why Resillion

We're a global testing and quality engineering partner from initiation to launch. We have:

- more than **20 years' experience** providing end-to-end testing solutions to hundreds of clients spanning all major sectors
- **700 experts** with a commitment to driving success, deploying cutting-edge technology and a passion for quality
- a **strong global talent pool** in India, China, Belgium, the Netherlands, Germany, the US and the UK.
- best-in-class technologies, leading solutions and industry-recognised services to **support our clients** throughout the digital lifecycle.
