1. Pricing Models

Infosys supports a wide range of commercial models, including Fixed Price, Unit of Work, Outcome-based, IP-based, and SaaS models.

We can provide services under either a Time & Material (T&M) pricing model or a Fixed Price model, depending on the nature and clarity of the scope.

For the current scope of work, we recommend a **T&M model**, while remaining flexible, to adopt other commercial structures based on the specific requirements and types of use cases. Under the T&M model (where applicable), Infosys will deploy appropriately skilled resources and invoice based on actual effort delivered. While Infosys works closely with customers to articulate and refine requirements, the client remains responsible for finalizing the scope and managing deliverables for the engagement.

Below is the rate card for Infosys Code Migrator:

Job family	Job role	Role level	UK Day Rate (GBP, excluding VAT and expenses)	Offshore Day Rate (GBP, excluding VAT and expenses)
GenAI/ Agentic AI/ Automation	AI/ Automation Architect	Architect	800	480
		Senior Architect	870	522
		Principal Architect	1100	660
	AI/ Automation Engineer	Associate AI Engineer	570	342
		Senior Associate AI Engineer	650	390
		AI Engineer	750	450
		Senior AI Engineer	865	519
	Programme Management	Lead Consultant	810	486
		Consultant	720	432

Depending on the client context and what works best for them Infosys recommends a wide range of commercial and delivery models, the common ones are described below:

Pricing Option/model	Details	Applicable Scenarios
Managed Services on a Fixed Price	Vendor is paid a fixed price at predefined milestones of the project. This approach is predictable and convenient for our customers to have a better control over their IT budgets. In a Fixed Price Contract, the commercial risk is transferred from the Client to the Vendor.	For maintenance & support services, fixed price can be worked out for a defined portfolio based on the historical ticket information.
Unit of Work (UoW) Based Pricing	The client pays for each unit of work or service transaction, based on output or consumption. Based on the definition of a "UNIT: there are many variants of this model: • Ticket based Pricing • Transaction based Pricing • Application based pricing • Work Packet based pricing • Test Unit bases pricing • Device Based pricing	Applicable where outcome can be defined at a granular level such as number of tickets. This model is best for situations where volume of the outcome is unpredictable, but the client has a view on the unit cost of the outcome such as cost per ticket.
Business Outcome Based Pricing/Gain Share model	Fee based on the business outcome or business case realized. The vendor is paid in proportion to the business value generated by the project or service, such as a percentage of increased profit or decreased cost. This usually leads to a Gain-Share mechanism where in the outcome risk of an initiative is shared.	Applicable for transformational programs or programs with a clearly defined business case.
IP/ Royalty Based Pricing	Client pays for Infosys IP – upfront fee and /or monthly fees, which can be linked to number of licenses used. Usually combined with other Pricing models	Client pays license fee for the IP developed and delivered by Infosys

Pricing Option/model	Details	Applicable Scenarios
Software as a SaaS (Software as a Service)	Vendor is paid a fee based on the amount of usage of software. SaaS as a model provides the flexibility to combine the cost of maintaining and upgrading the required hardware, software and other IT resources into a single pay-as-you-go service fee. This pay-as-you-go model enables elimination of capital expenses. Reduced upfront investment and savings from operational expenses provides CAPEX and OPEX advantages.	Provides the ability to achieve faster time-to-market and better adapting to business cycle changes. Client could also consider outsourcing the Business Process through Infosys BPO
