

G-Cloud 15 – eDiscovery (eDisclosure)

A KPMG Service for G-Cloud 15

Intelligent Data & eDiscovery Solutions

eDiscovery capabilities can impact areas beyond the EDM lifecycle. With Generative AI functionality, technology traditionally siloed within legal can have far reaching impact throughout an organisation.

As eDiscovery technology advances and integrates with Generative AI capabilities, its applications can extend beyond eDiscovery. Contract and Data Remediation, DSARs, PII and other areas should take advantage to ensure consistent and efficient outcomes.

However, before exploring new uses within the organisation, it is crucial to ensure excellence in data management, especially in high-volume, multi-provider environments. Establishing a clear understanding of data location and governance is paramount to unlocking your data and eDiscovery technology's full potential.

The challenge for Organisations

Some of the key data and technology challenges include:

- Cloud based solutions offer many advantages. However, institutions still require legacy systems, adding cost and complexity.
- Extracted data should be reusable. However, it is often split across multiple environments or providers, making re-use difficult and expensive.
- Vendors' proprietary approaches, including Gen AI implementations, can lock-in institutions, making provision and knowledge transfer costly or impossible.
- Lacking a unified coherent technology approach leads to inconsistency in how data is handled, workflow approach and outcome.

Questions to Consider

- Where is your extracted data and can it be reused?
- Gen AI solutions have huge potential to reduce legal spend. Is your organisation using the best approach?
- Have you standardised your eDiscovery Approach?
- Does your eDiscovery tech positively impact areas beyond Legal?

How we can help

Our proven forensic methodology and tooling empower institutions to manage eDiscovery provision effectively, extending benefits beyond legal. We can assist with the following:

RelativityOne: Our (Gold Partner) RelativityOne implementation is available across the globe in multiple jurisdictions. KPMG have adopted AIR meaning Gen AI functionality is fully integrated into the platform and positioned to decrease review duration and costs.

Broad Specialist Team: Our global team of Relativity-certified experts can implement tailored workflows for matters, migration use cases and can augment existing teams. Our expertise extends beyond eDiscovery, encompassing contract and data remediation (structured and unstructured), DSARs, and PII use cases.

Pricing and Migration: Our incentivised pricing is competitive and will not inhibit migration of data from incumbent systems to RelativityOne. This includes enhanced cold storage rates for legacy data and data subject to migration. Eliminating cost and time as a barrier for improvement.
