

Palantir Design Implementation Services

A KPMG Service
for G-Cloud 15

Palantir Design Implementation Services

Service Description:

KPMG Palantir design and implementation services helps clients build self-service data analytics, reporting, interactive dashboards and visualisation solutions using Palantir's Foundry platform.

We bring expertise in data analytics, data modelling, integration, data science and the wider Foundry platform. KPMG also offers Palantir managed services, training and governance services.

What are the benefits of KPMG Palantir?

- Design and implementation of interactive data visualisation solutions on Foundry
- Definition and implementation of User Access Model
- Enable self-service analytics through leading-practice Foundry implementation and training
- Optimised Foundry ML capability including Foundry centre of excellence
- Engineering of user focused data pipelines and applications
- Strategy and Governance: Advice, planning and business case creation
- Full ML lifecycle implementation: delivery, testing, training, service transition
- Technical and programme assurance utilising trusted KPMG methodology
- Provide end-to-end data management and ontology
- Migration of data solutions across Foundry tenants

Our service features

- A leading professional services practice, with certified Palantir Engineers
- Deep understanding and experience of the UK public sector
- Experienced with delivering Government Digital Service (GDS) compliant services
- Expertise in data and analytics, ML development and training
- Accelerate time to value with KPMG's trusted approach and methodology
- Knowledge and skill transfer to build internal Foundry capabilities
- Post-implementation helpdesk support, managed service and capability development
- Rapid deployment of PoC, MVP or full products
- Support product roadmap, strategy development for end-user

Our Approach

Implementation Plan:

We deliver these projects in the phases set out below:

Digital Maturity Assessment:

In this phase we'll adapt our assessment toolkit including comprehensive surveys, maturity criteria and template reports to meet project requirements.

Customisable implementation plan:

We'll create customisable implementation plans tailored to each barrier to adoption. For example, for poor data literacy, we'd suggest training from our accredited Analytics Learning Programme.

Deliver technical infrastructure:

In concert with Palantir engineers, we will set up the necessary technical infrastructure, including securely connecting to key source systems. Focusing on Data Quality, we will work closely with your DQ team to establish high DQ and configure custom alerts required for ongoing DQ maintenance.

Agile test strategy and assurance framework:

An agile test strategy will keep pace with rapid product development. Creating a test assurance framework which includes automation and test optimisation ensures high quality, efficient testing.

Data Governance and Data Standards:

During this phase we design and apply data standards in a five-step process. Design and establish a Data Governance Framework, Provide data access and sharing guidelines, Educate and train staff on data governance, Monitor and evaluate data governance effectiveness, Support the change and evolution of standard data models.

Onboarding and offboarding support:

Onboarding

- We'll rapidly deploy high performing teams from our extensive resource pool across KPMG and partners
- Production of high quality cross-programme and team-specific onboarding packs
- Definition of collective roles and responsibilities including that for outputs
- Proactive management to address risks before they impact.
- Understanding of rainbow teams' skills, enabling targeted training/recruitment to address gaps.
- Execution of a Project kick off event and associated materials to formally launch the project and to aid new joiners in orientation

The migration of client data is often a critical path item on the onboarding plan. We work with our clients to assist them to transition data to the new Platform. As part of this we would provide standard templates and knowledge transfer to allow the client and/or their existing service provider to extract and provide data in the correct format.

Offboarding:

We recognise that effective knowledge transfer needs to happen in several ways. We offer a range of channels for learning and will select and design the most appropriate ones for Foundry with you and we're ready to adapt these channels for this programme.

KPMG Approach

Our approach to providing the Palantir Design and Implementation service comprises collaborative stakeholder engagement, Agile development and tailored solutions delivered by healthcare and technical experts.

Our Approach

Requirements Capture

We engage stakeholders to understand their needs and design the solution.

Agile Development

Our Agile methodology of development delivers rapid deployment of an evolving product.

Deploy and review

We support the deployment of the solution and obtain feedback to ensure user requirements have been met.

Our Team

Healthcare Data Experts

Our team of experienced analysts understand healthcare data and its application.

Solution Developers

We have a pool of Data Architects, BI Developers, Cloud DevOps and Data Scientists to deploy onto solutions.

Alliance Partners

We are able to leverage the expertise of partners in Palantir to guide design and development of solutions.

Our Solutions

Data Modelling

We can build your data model, and modelling solution combining and enhancing data from multiple sources.

Cloud Infrastructure

We have the ability to architect and deploy Foundry solutions at pace and tailor them to requirements.

BI Reporting

We can tailor the reporting solution in Foundry.
