Pricing Approach

Services for the implementation and deployment of SAP Support solutions from HCLTech can be priced in different ways to accommodate the client's requirements. These are described below:

Options Available	Description	Applicable Scenario
Managed Services/ Dedicated Services	HCLTech is paid a fixed price at predefined milestones of the project. Any changes or variations in the scope or requirements will be managed through a change control process and may impact the overall pricing.	For maintenance and support services, a fixed price can be worked out for a defined portfolio based on the historical ticket information.
Time & Materials	This is our standard commercial arrangement for the provision of services based on the daily rates provided in our rate card. These are aligned to the grades. Invoices are then calculated monthly. HCLTech works closely with its customers to help articulate and define requirements and deliverables, but the customer will be responsible for finalising the scope and managing the deliverables for the engagement.	For maintenance and support services on a demand basis. Dynamic requirement. Flexibility to modify the scope or vary the workloads.
Business Outcome Pricing	Fee based on the business outcome or business case realised.	Applicable for transformational programmes or programmes with a clearly defined business case. For example, consulting for transition to different modules, architecture or technology for transformation.
Enterprise Core Services Pricing	Our packaged and uniquely tailored enterprise core services to address specific needs of your business.	• SAP HANA Assessment • SAP HANA Enablement Services • SAP HANA Transformation Services • SAP HANA Analytics Services
Shared Services	This is where the client and partner share the upfront cost of the implementation or development, as well as future savings. Our rate card includes rates for both onsite as well as offshore resources based in our Global Delivery Centres (GDCs) in India. The resourcing model blend of onsite, offshore or hybrid resources, would be discussed and agreed at the time of	BASIS, ABAP, Security, etc.

G-Cloud 15 - Lot 3 Support – Consulting and Support - Pricing Document

	request, depending on the nature of work. We can offer to include volume discounts for larger engagements. The details of the type and range of discounts will be determined at the point the request is made, considering the scale and duration of the services in question. We are able to provide further details of this option upon request.	
Cloud Services Pricing	Our approach is to design, build, and deliver an enhanced digital technology footprint (eDTF) on SAP Cloud Platform, to provide the best experience for all relevant types of users-customer, consumer, partner, supplier and employee. This focus on eDTF is rooted in leveraging micro-services around key experiential elements of a solution to touch every facet of the user engagement resulting in a transformative experience, which leads to transforming your business.	• SAP Cloud Platform as a Service (PaaS) • SAP Success Factors • SAP Cloud Infrastructure as a Service (IaaS) • IoT (Internet of Things) • SAP UX Services – user experience.
Unit Work Services	The client pays for each unit of work or service transaction, based on output or consumption. For example, module/ application wise or ticket based.	Applicable where the outcome can be defined at a granular level, such as number of tickets or each module being supported.
Hybris Services Pricing	The SAP Hybris Customer Engagement & Commerce suite of solutions is designed to enable businesses to meet the challenges of digital transformation. It is highly flexible and supports Cloud or on-premise deployment models.	• Digital SAP Transformation • Predictive service alert framework for call centre agents powered by HANA • Intelligent order management with embedded analytics and pre-built integrations. • Consolidated experience hub, configure to order, parts page, service integration, subscription revenue and pre-built integrations
SMART Technologies Pricing	Go beyond cost savings. Apply Artificial Intelligence (AI) and other SMART technologies to IT automation and “set the enterprise free” by simplifying operational complexity and enabling business outcomes through orchestration.
