

Abavus - Waste Management

Product - Waste Management	Enterprise Functions	Routed Optimisation Functions
The My Council Services Waste Management module provides specific line of business functionality to manage refuse, waste and recycling processes. The implementation of our Waste Management module will require additional consulting to ensure the system is configured to meet the council's specific requirements. This module offers a fully configurable and feature-rich management of all aspects of local authority waste management processes. This includes:	Container type setup and configuration. Management and configuration of exception days. Display of container collection routing. Container collection live reporting. Waste analytics. Mobile Waste Worker (priced separately per device). Know My Bin Day.	Route planning and optimisation for waste collection schedules. Each subsequent optimisation process can be completed by the council, subject to appropriate training on the system.
