1 Introducing Power Framework for Planner

Power Framework for Planner is an easy-to-use, highly affordable Project Portfolio Management app. It's the ideal foundation for a PMO that wants to streamline project processes, move away from spreadsheets to a much more efficient and data-driven way of working, and enable AI.

2 Pricing

Below describes the cost model for the deployment and operation of Power Framework for Planner. Please see separate service definition document for further detail of configuration services within Standard and Enhancement service packages.

Prices are exclusive of VAT.

2.1 Solution Cost (Standard)

This is the cost for standard implementation services and Year 1 license/support:

Item	Basis	Cost
Implementation Services 10 days consulting @ £1280 3 days project management @ £975 To deploy with out-of-the-box capabilities.	Service days	£15,725
Annual License & Support - License to use the application in a single production instance (unlimited users) - Provision of sandbox environment - Helpdesk service	Annual cost	£5,800
Total (Year 1):		£21,525

2.2 Optional Add-on: Enhancement

Add this service package to deliver further configuration:

Item	Basis	Cost
Configuration Services (Enhancement) (min) 5 days consulting @ £1280 (min) 1 day project management @ £975 This budget may be increased further to deliver more complex requirements.	Service days	£7,375

2.3 Things To Note

Remote Service Delivery

It is assumed that all services will be delivered remotely. Onsite delivery is possible (e.g. workshops) and will incur additional cost for travel and subsistence.

How We Invoice

The annual License & Support charge will be invoiced upon first installation of the solution into your own tenant.

Professional Service will be invoiced monthly in arrears, based on work done in the month.

Technical Assumptions

We need the assistance of your IT team in creating solution environments in your Microsoft tenant. Our consultant(s) require remote administrative access accounts to those environments, with appropriate licensing.

3 Microsoft Infrastructure and License Requirements

The application will be deployed in your own Microsoft tenant, in a dedicated Power Platform.

The Microsoft cloud licenses below need to be procured by you via your regular Microsoft license procurement channel, cost are not included above.

We require our Microsoft partner account to be recorded in your tenant as the [Digital Partner of Record](#) for the Microsoft licenses associated with this solution.

Licensing for Planner

Users of the app who need to maintain project data (such as PMO users and project managers) need to have a 'paid for' Planner license. For an overview of Planner licensing see the Microsoft product page [here](#).

Allocate a 'Planner Plan 1' license to the following users:

- Anyone needing to edit project data in the app
- Project managers requiring just basic planning features in Planner schedules

Allocate a 'Planner and Project Plan 3' license to the following users:

- Project managers requiring advanced planning features in Planner schedules (such as baselines, task history, advanced dependencies, critical path, resource assignment view)
- Anyone wishing to use AI features (would also require Copilot license)
- Solutions administrators
- Power Framework consultants working with you to implement the solution

Regular Microsoft 365 users will have view-only access to Planner schedules and app data. Team members who have been assigned tasks from Planner schedules equally do not require a specific Planner license to see their tasks and update task completion.

For further information on capabilities unlocked by different license levels see Microsoft's service description page [here](#).

Power Apps & Power Automate

The Planner and Project licenses include Power Apps and Power Automate usage whilst in context of the Project App.

Power BI

Required by report authors and report consumers (who may already be licensed for Power BI by your organisation for other purposes).

Microsoft Power BI standard licensing applies (see [here](#)).

Microsoft365 Copilot

Required for any user wishing to use Planner AI features (in combination with 'Planner and Project Plan 3' license).
