

Transform project risk into clarity and control

Asite Overview

Asite brings together information to support decision-making across the project lifecycle.

Market leading since 2001, our software helps thousands of organizations in the construction and infrastructure industries automate their collaborative business processes and focus their attention on delivering innovative projects.

Asite has been built in-house by our global team of experts in structured data exchange, machine learning and digital transformation.

Trusted by over 84,000+ companies globally.

Product Offerings

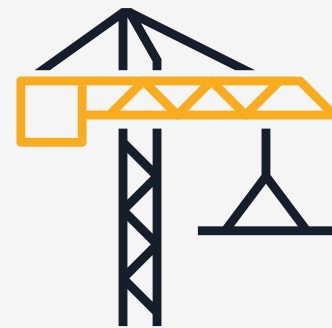

The complete range of solutions available on the Asite Platform Supply Chain Management, Asite Project Portfolio Management (PPM) and Asite Asset Performance Management (APM).

Supply Chain Management

Create efficient digital supply chains using cloud-based tools to save time and money. As part of the SCM family, Asite Marketplace facilitates the bi-directional flow of information between project stakeholders, enabling the digital management of supply chains.

Connect People

Project Portfolio Management

Connect dispersed project teams and systems, to streamline communication across a project. As part of the PPM family, the Asite Common Data Environment (CDE) provides advanced document, BIM, field, and reporting management solutions, all from one central location.

Build Better

Asset Performance Management

Organizations can maintain a golden thread of information through complete asset lifecycle management and the seamless flow of data.

The standout feature of the Asite APM solution is the Asite Digital Twin product offering.

Building Resilience

Solutions & Benefits

An end-to-end product suite to streamline processes and improve collaboration across the entire project lifecycle.

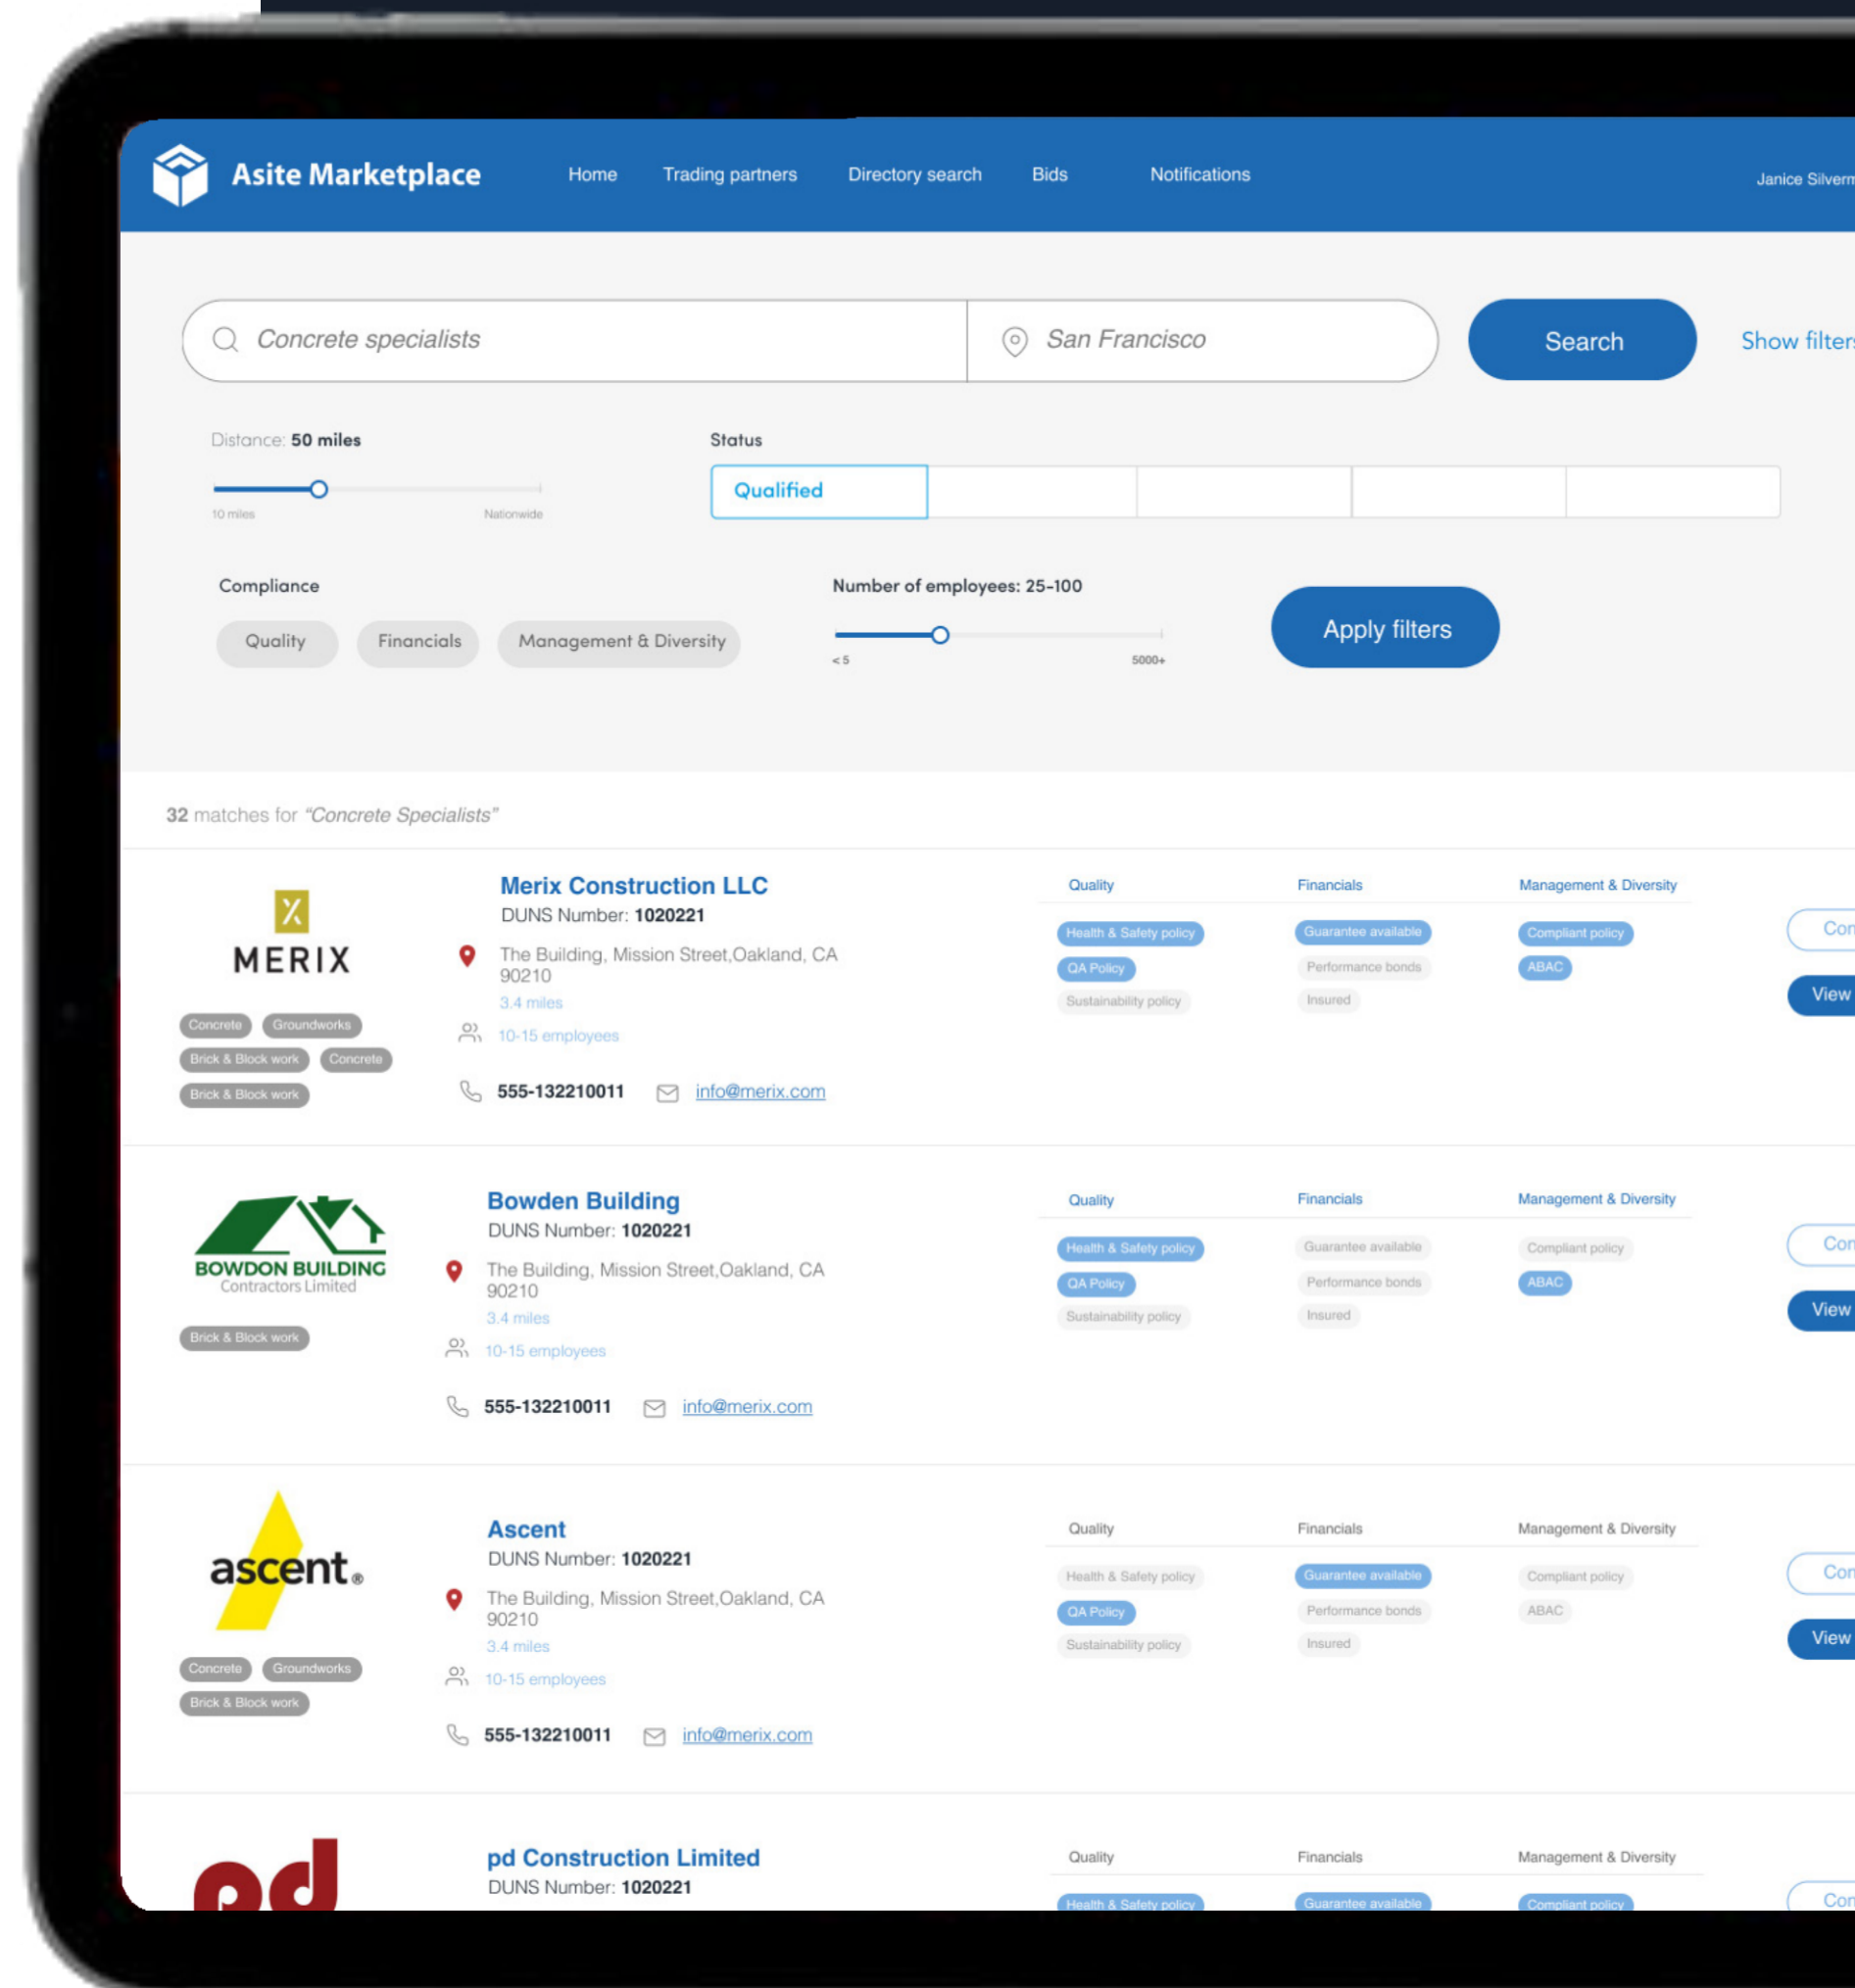

Supply Chain Management

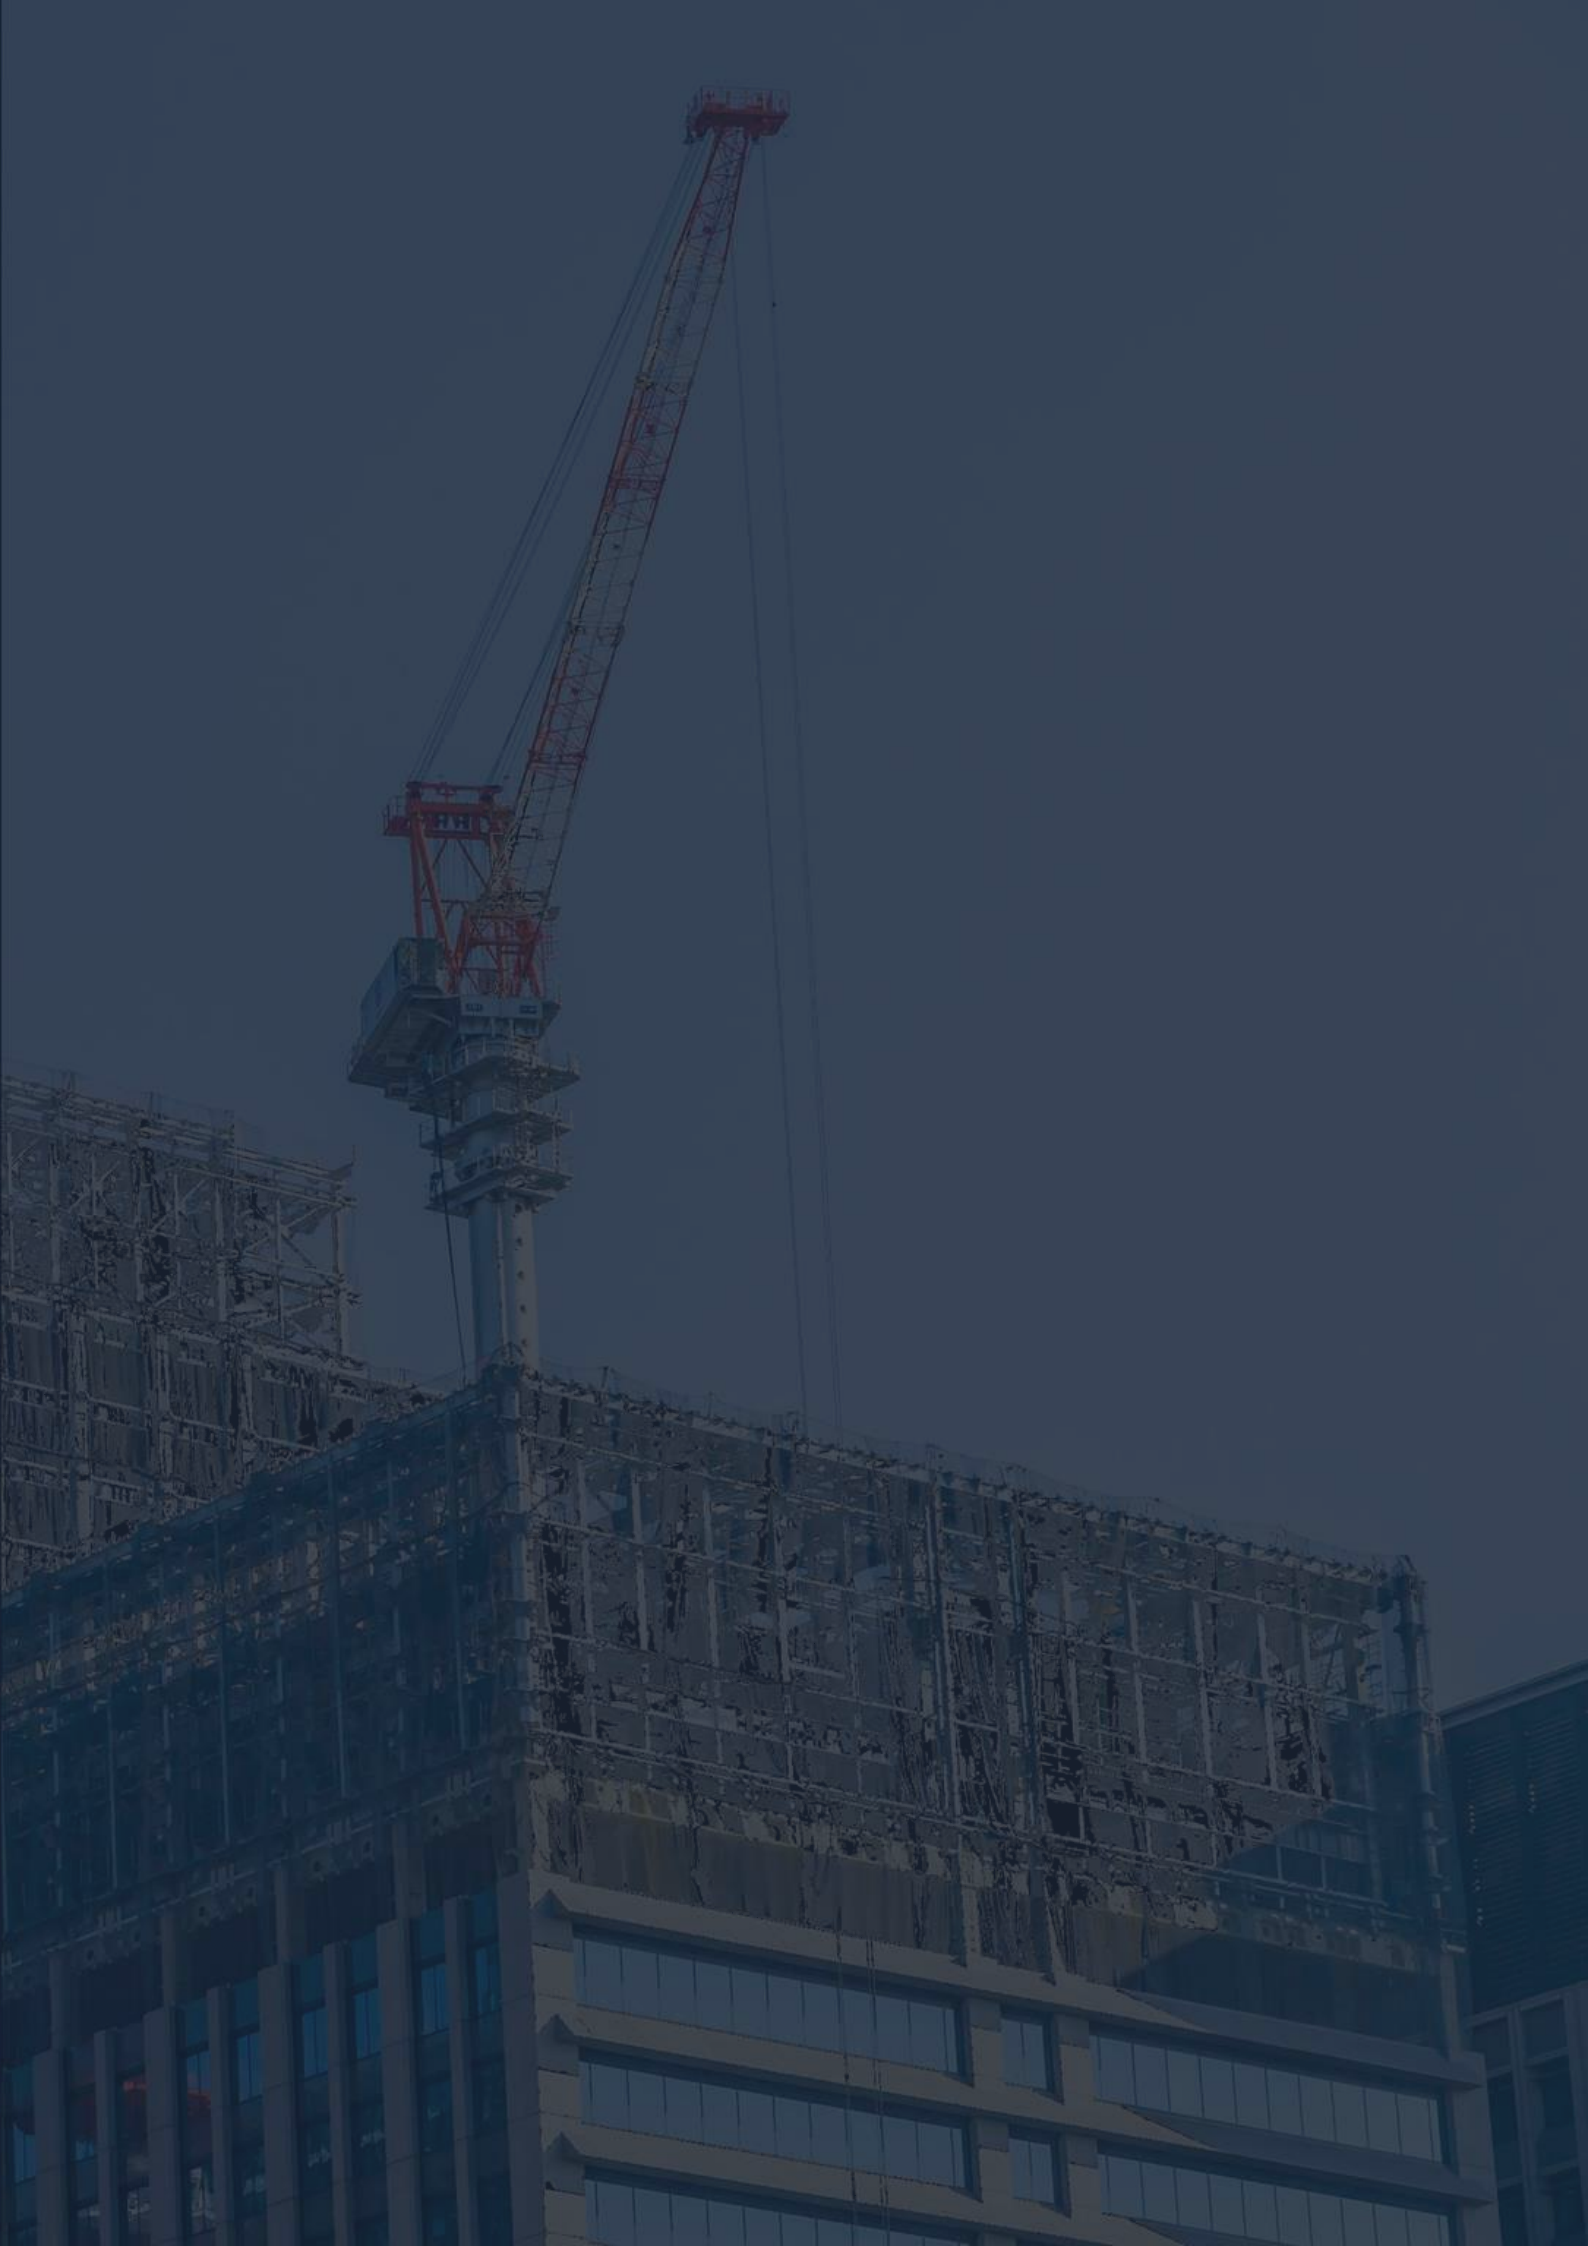

Asite Marketplace

Access a single point of entry for companies to promote their business, build a network of suppliers and win work. Connect with new partners based on their sector, location or trade expertise through an open platform.

The Asite Marketplace provides tools to build resilient supply chains digitally, driving efficiency and successful source to pay processes.

Correspondence, reporting, bid generation, supplier evaluation, and contract negotiation, alongside a supplier directory are all maintained within a single online platform allowing organizations to create efficient digital supply chains, saving both time and money.

Supplier Performance Management

Select subcontractors or suppliers with more confidence. View how your organization or previous projects have rated suppliers or subcontractors you are considering for your next job.

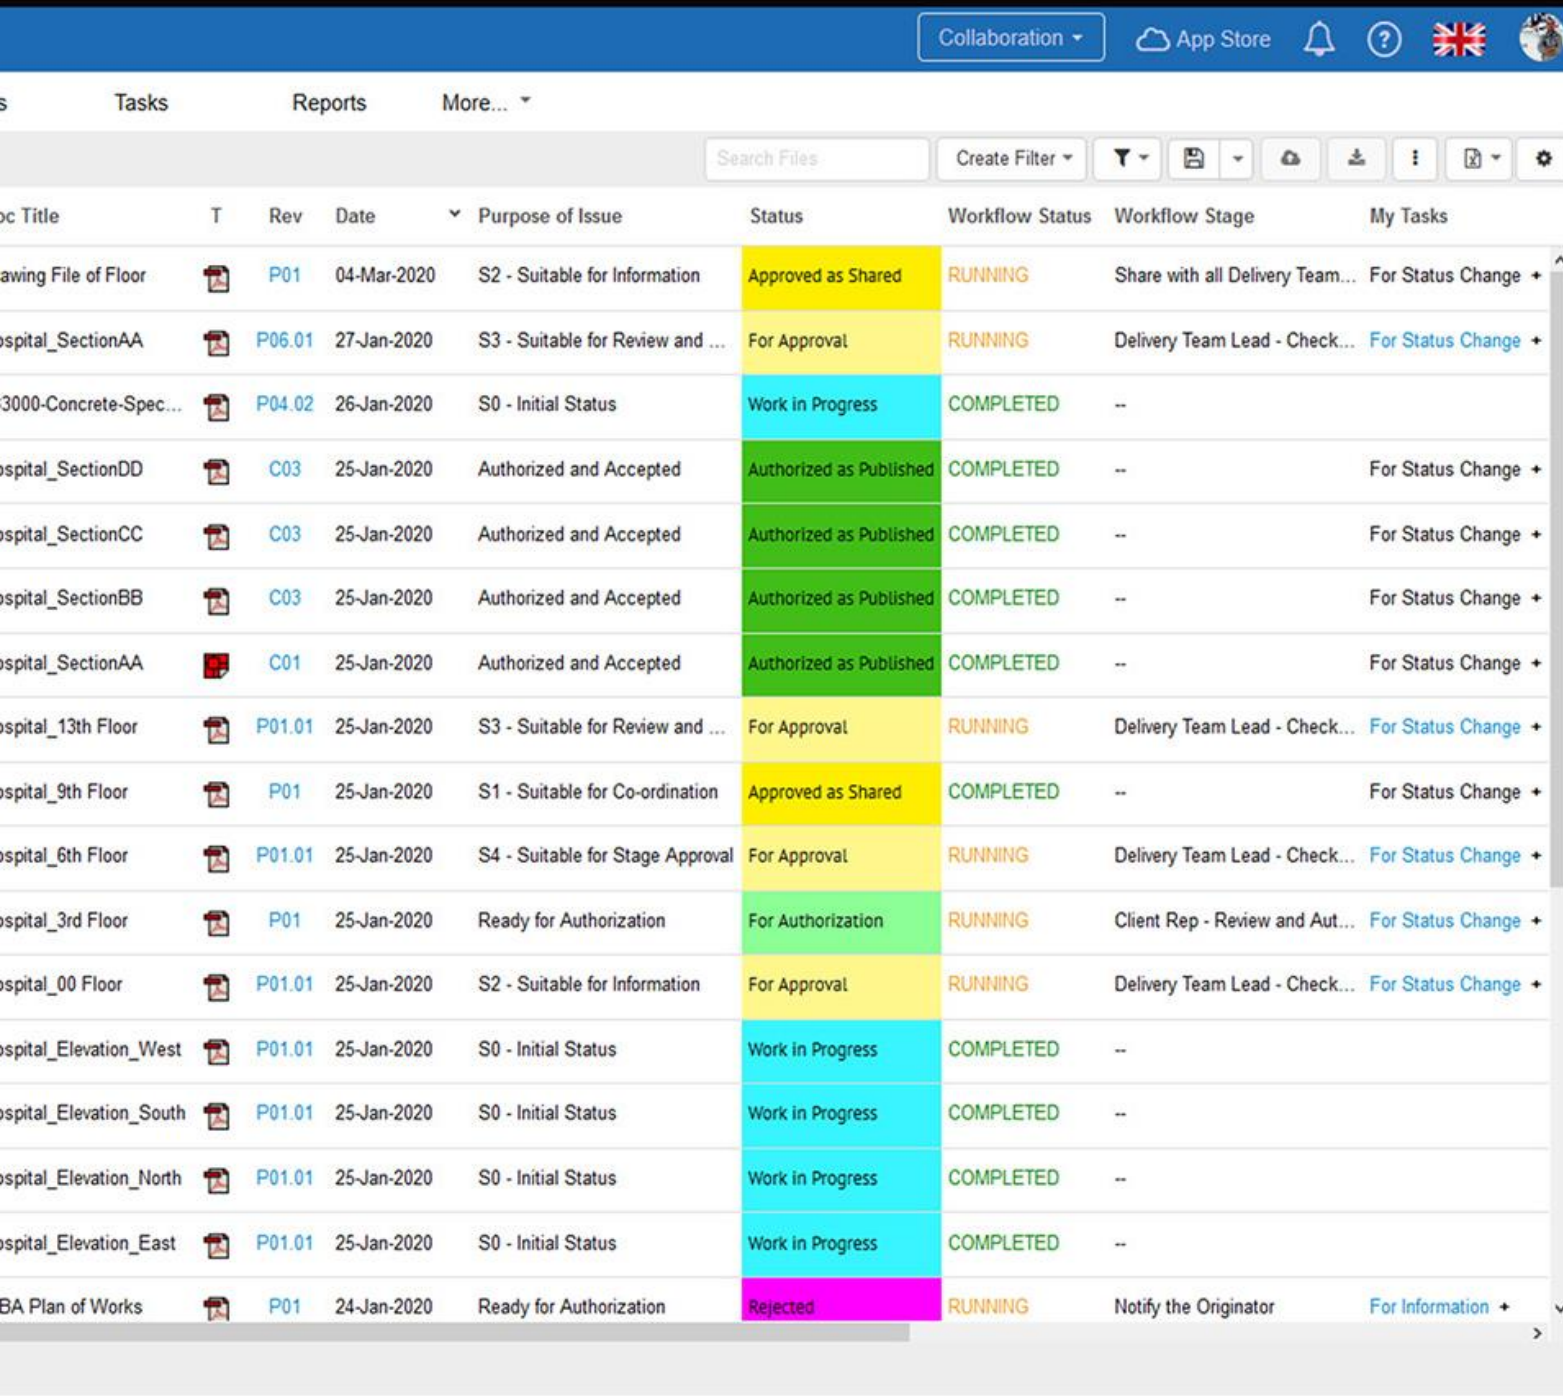

Perform 360 reviews to evaluate the performance of your supply chain across your project portfolios then rate who you work with after. Help your team select the best supply chain for your project.

Bid Management

Streamline the manual and time-consuming process of managing bids. Procurement teams use Bid Management to bring documentation, question sets, measures, and evaluation criteria together to define and electronically issue packages of works.

Monitor the progress of supplier returns from submission to evaluation and award. Reduce human error during the review process and ensure the impartiality and transparency of final decisions.

Project Portfolio Management

Common Data Environment (CDE)

The Asite CDE provides a single source of information stored in a secure cloud- based environment. Streamline communication at all levels, gain a holistic view of all projects, and enhance collaboration.

Using the Asite CDE, organizations can store, track, manage, and share all project assets from one centralized repository across the supply chain.

Organizations who utilize the Asite CDE benefit from a range of functionality including Document Management, Workflow Management, cBIM, Project Forms and Reporting Management solutions, all of which enable more productive and collaborative methods of planning, designing, and constructing assets.

Contract Management

The Asite Contract Management solution provides teams with real-time visibility and control across the contract process, greatly reducing risk on any project. A centralized auditable view of notifications across all contracts is created, ensuring project team members are using the same information.

The solution caters to many different contract types such as the International Federation of Consulting Engineers (FIDIC), Joint Contracts Tribunal (JCT), and New Engineering Construction (NEC) – including Engineering and Construction Contract (ECC), NEC3, and NEC4.

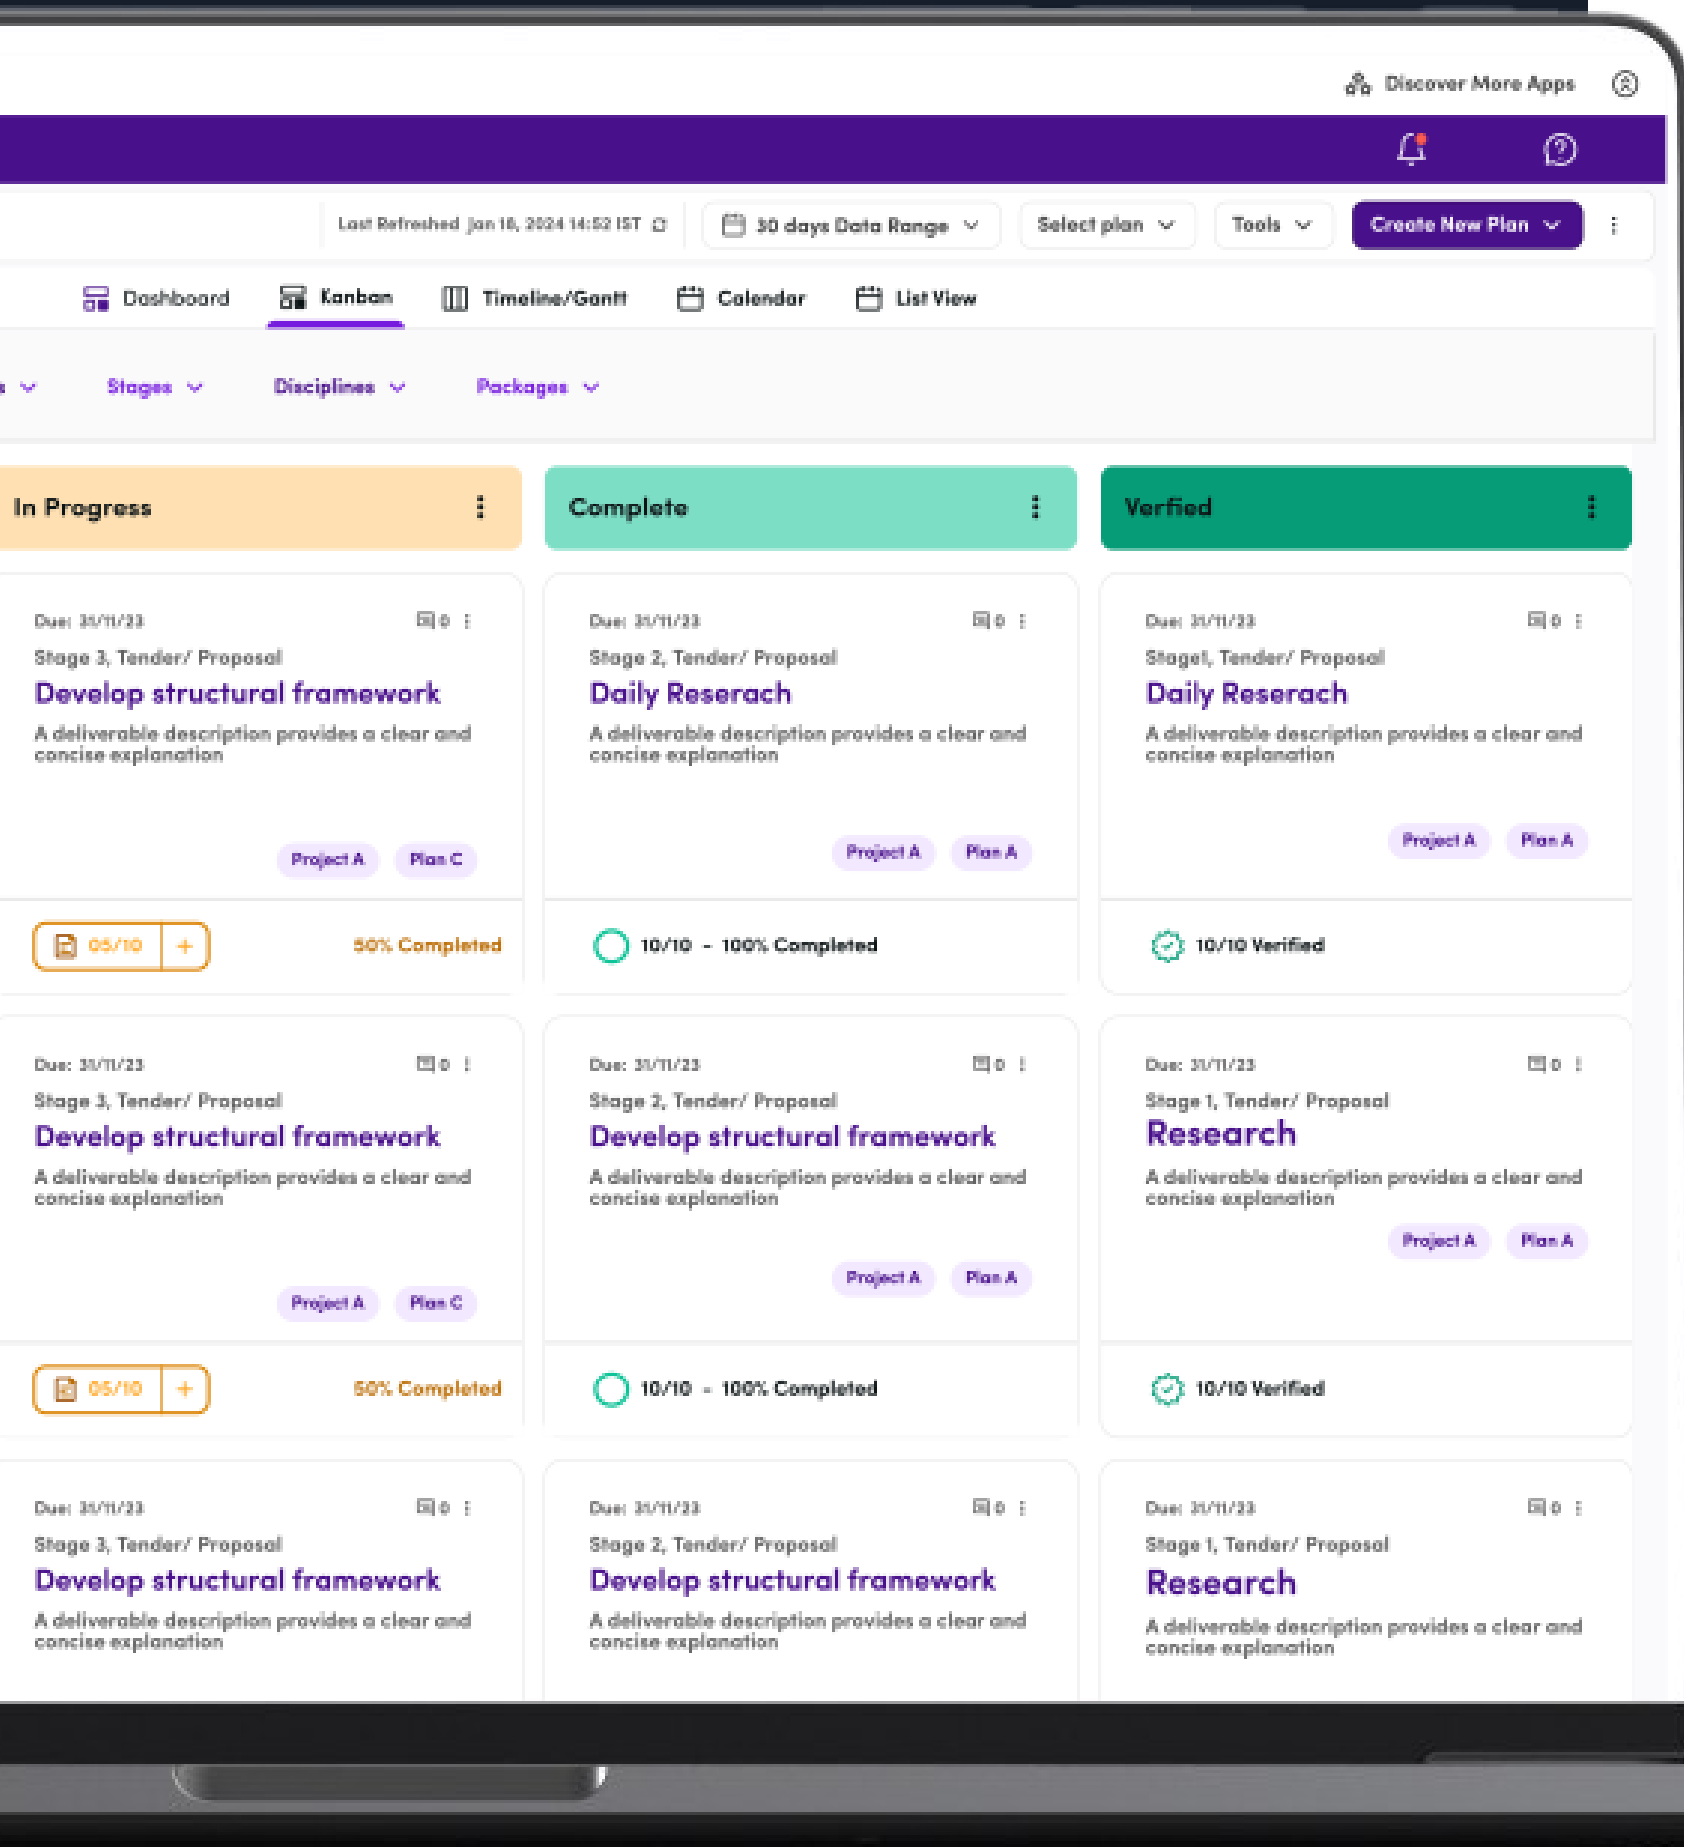

Project Financials

The Asite Project Financials solution is a flexible and seamlessly integrated cost and schedule management solution.

The solution provides project owners with clear visibility of project budget, commitments, expenditure, estimated and actual costs, and scheduled information across their portfolio of projects in one single secure location.

Organizations can also generate and schedule custom reports through the solution, allowing teams monitor progress and enabling them to make informed decisions.

Asite Playbook

Enhance your Common Data Environment (CDE) with an intuitive task management tool. Use Kanban boards to track personal project deliverables, Gantt charts for a comprehensive task timeline, and task matrices to monitor real-time project progress. These features streamline team coordination and help teams to keep projects on track. Proactively identify information bottlenecks and ensure project milestones are met.

Use Asite Playbook to help stay compliant and reduce risks by maintaining a comprehensive audit trail for all decisions and data points, safeguarding against costly errors.

aMail

aMail integrates Asite's CDE with your inbox to ensure no information is lost and project teams are all using a common view of the latest information.

Auto-upload emails into specific folders in the CDE minimizing the back and forth of downloading emails and uploading them manually. Save time by logging into one software.

Asite Field

Asite Field ensures that those working on-site have access to CDE files, both online and offline, using the mobile and tablet app regardless of location.

Using the simple and easy-to-use interface, project teams can efficiently create, view, and manage site tasks – such as defects, punch lists, and snags – using mobile/tablet devices.

... Asite Field seamlessly integrates with the Asite CDE.

aDrive

aDrive is a CDE add-on that connects your cloud data to the desktop for real-time collaborative editing and ease of access.

aDrive includes a Desktop integration for Windows and MacOS and a Microsoft Office 365 Connector. The connector gives project teams a unified and simplified online interface to view, edit and manage Microsoft Office files (Word, Excel, PowerPoint) with multiple co-authors, all directly from Asite CDE with the foundations of a automatic and rock-solid audit trail.

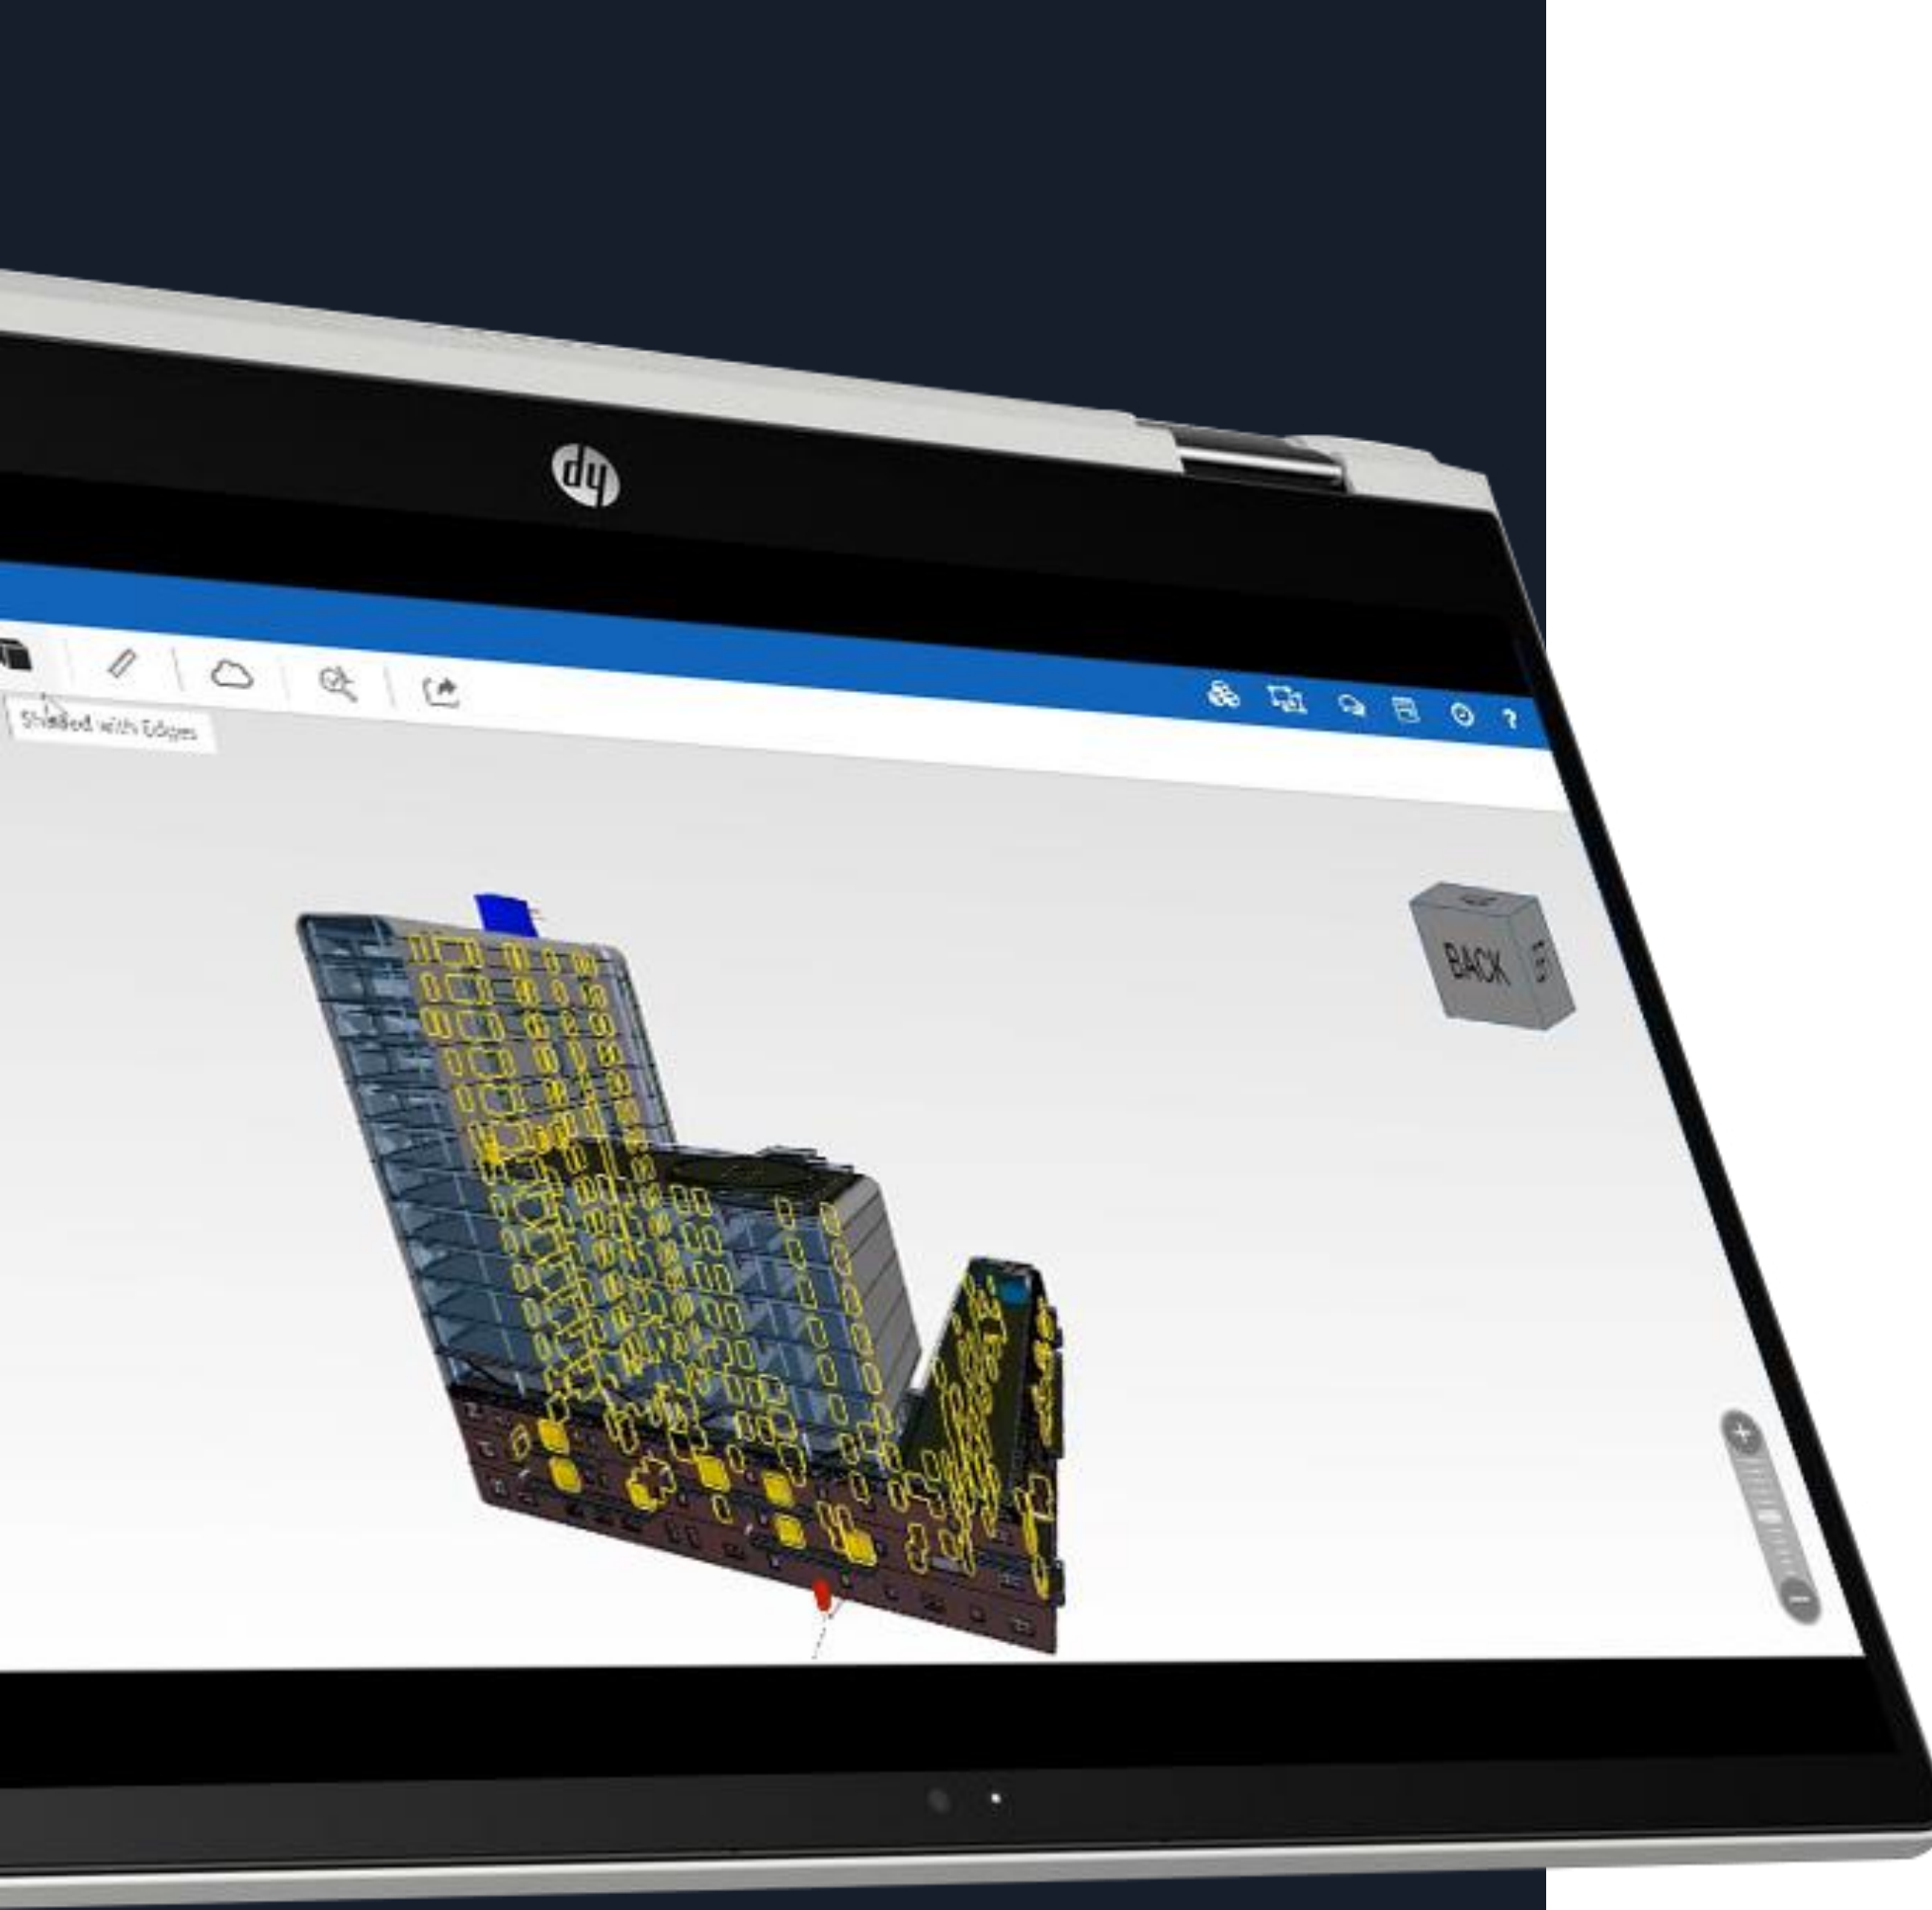

3D Repo

3D Repo is an online platform to help manage Building Information Modelling (BIM) data during design, delivery and operation. Teams can communicate and access live BIM data, all through a web browser and collaborate for a better built environment.

Maximize the accessibility of existing BIM models without the need for additional technical training or licenses. Reduce expensive licenses and access designs from one platform.

Asset Performance Management

Digital Twin

The Asite Digital Twin product supports organizations in maintaining a golden thread of information through complete asset lifecycle management and the seamless flow of data.

Organizations can store as-built information in a secure, centralized location in the cloud throughout the project lifecycle. Maintenance schedule and inventory planning can be managed and generated through the solution, and information is continuously updated to prevent time-consuming and expensive audits and simplify information handover.

The Asite Platform

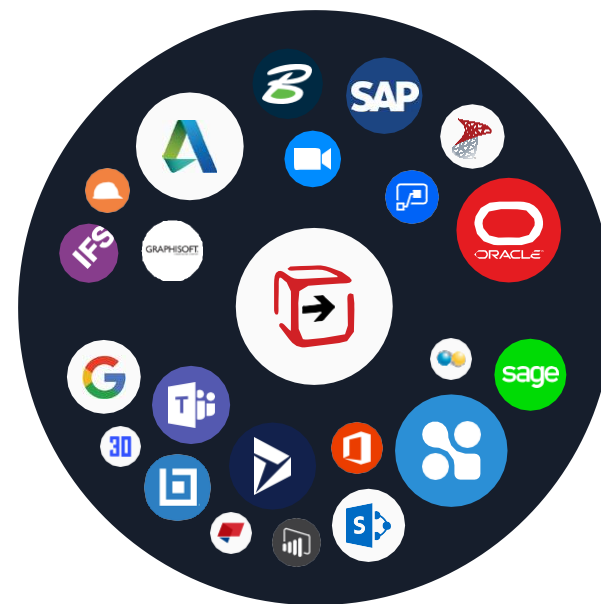

The Asite Platform brings teams together, improving communication and collaboration, and connecting supply chains to deliver capital projects and maintain assets.

Organizations who utilize the Asite Platform benefit from a range of functionality including tailored project dashboards, trackable tasks, visual workflows, automated and custom reporting, and aMessage – the secure and private messaging solution.

Through the Asite Platform organizations can also utilize pre-built Apps or create their own Apps through the AppBuilder solution. This enables organizations to design, build, test, and deploy custom forms directly within the Asite Platform.

The Asite Platform works to bring all project data together while ensuring security and compliance remain paramount.

Part of the Asite Platform, Asite Application Programming Interface (API), allows users to seamlessly integrate other software applications to support their projects, streamline processes, and power new business models.

Asite's Open Data API enables other software applications to interact with the services and data stored within the Asite platform. Representational State of Transfer (REST) based interfaces are fully supported, allowing users to put their data to new uses and improve their existing processes and operations; thereby, optimizing internal construction processes without duplicating data or project information.

The Asite Ecosystem

The Asite Ecosystem is made up of solutions, software plug-ins, and third-party applications that integrate with the Asite Platform. These partners, consultants, and resellers are helping organizations to adapt their technology platforms to meet the complexities of their businesses.

It enables Asite users to benefit from improved interoperability and global reach. Asite and their partner organizations enable seamless connections and facilitate the open flow of data between IT systems, empowering customers to create more innovative solutions for their own unique needs.

Asite Ecosystem members range from brand names in collaboration software – such as Google Meet, Zoom, and Microsoft Teams – to world-leaders in construction technology, including Bentley Systems' ProjectWise, Bluebeam, 3D Repo, and Autodesk Revit. Analytics capabilities – such as Microsoft PowerBI and Industry

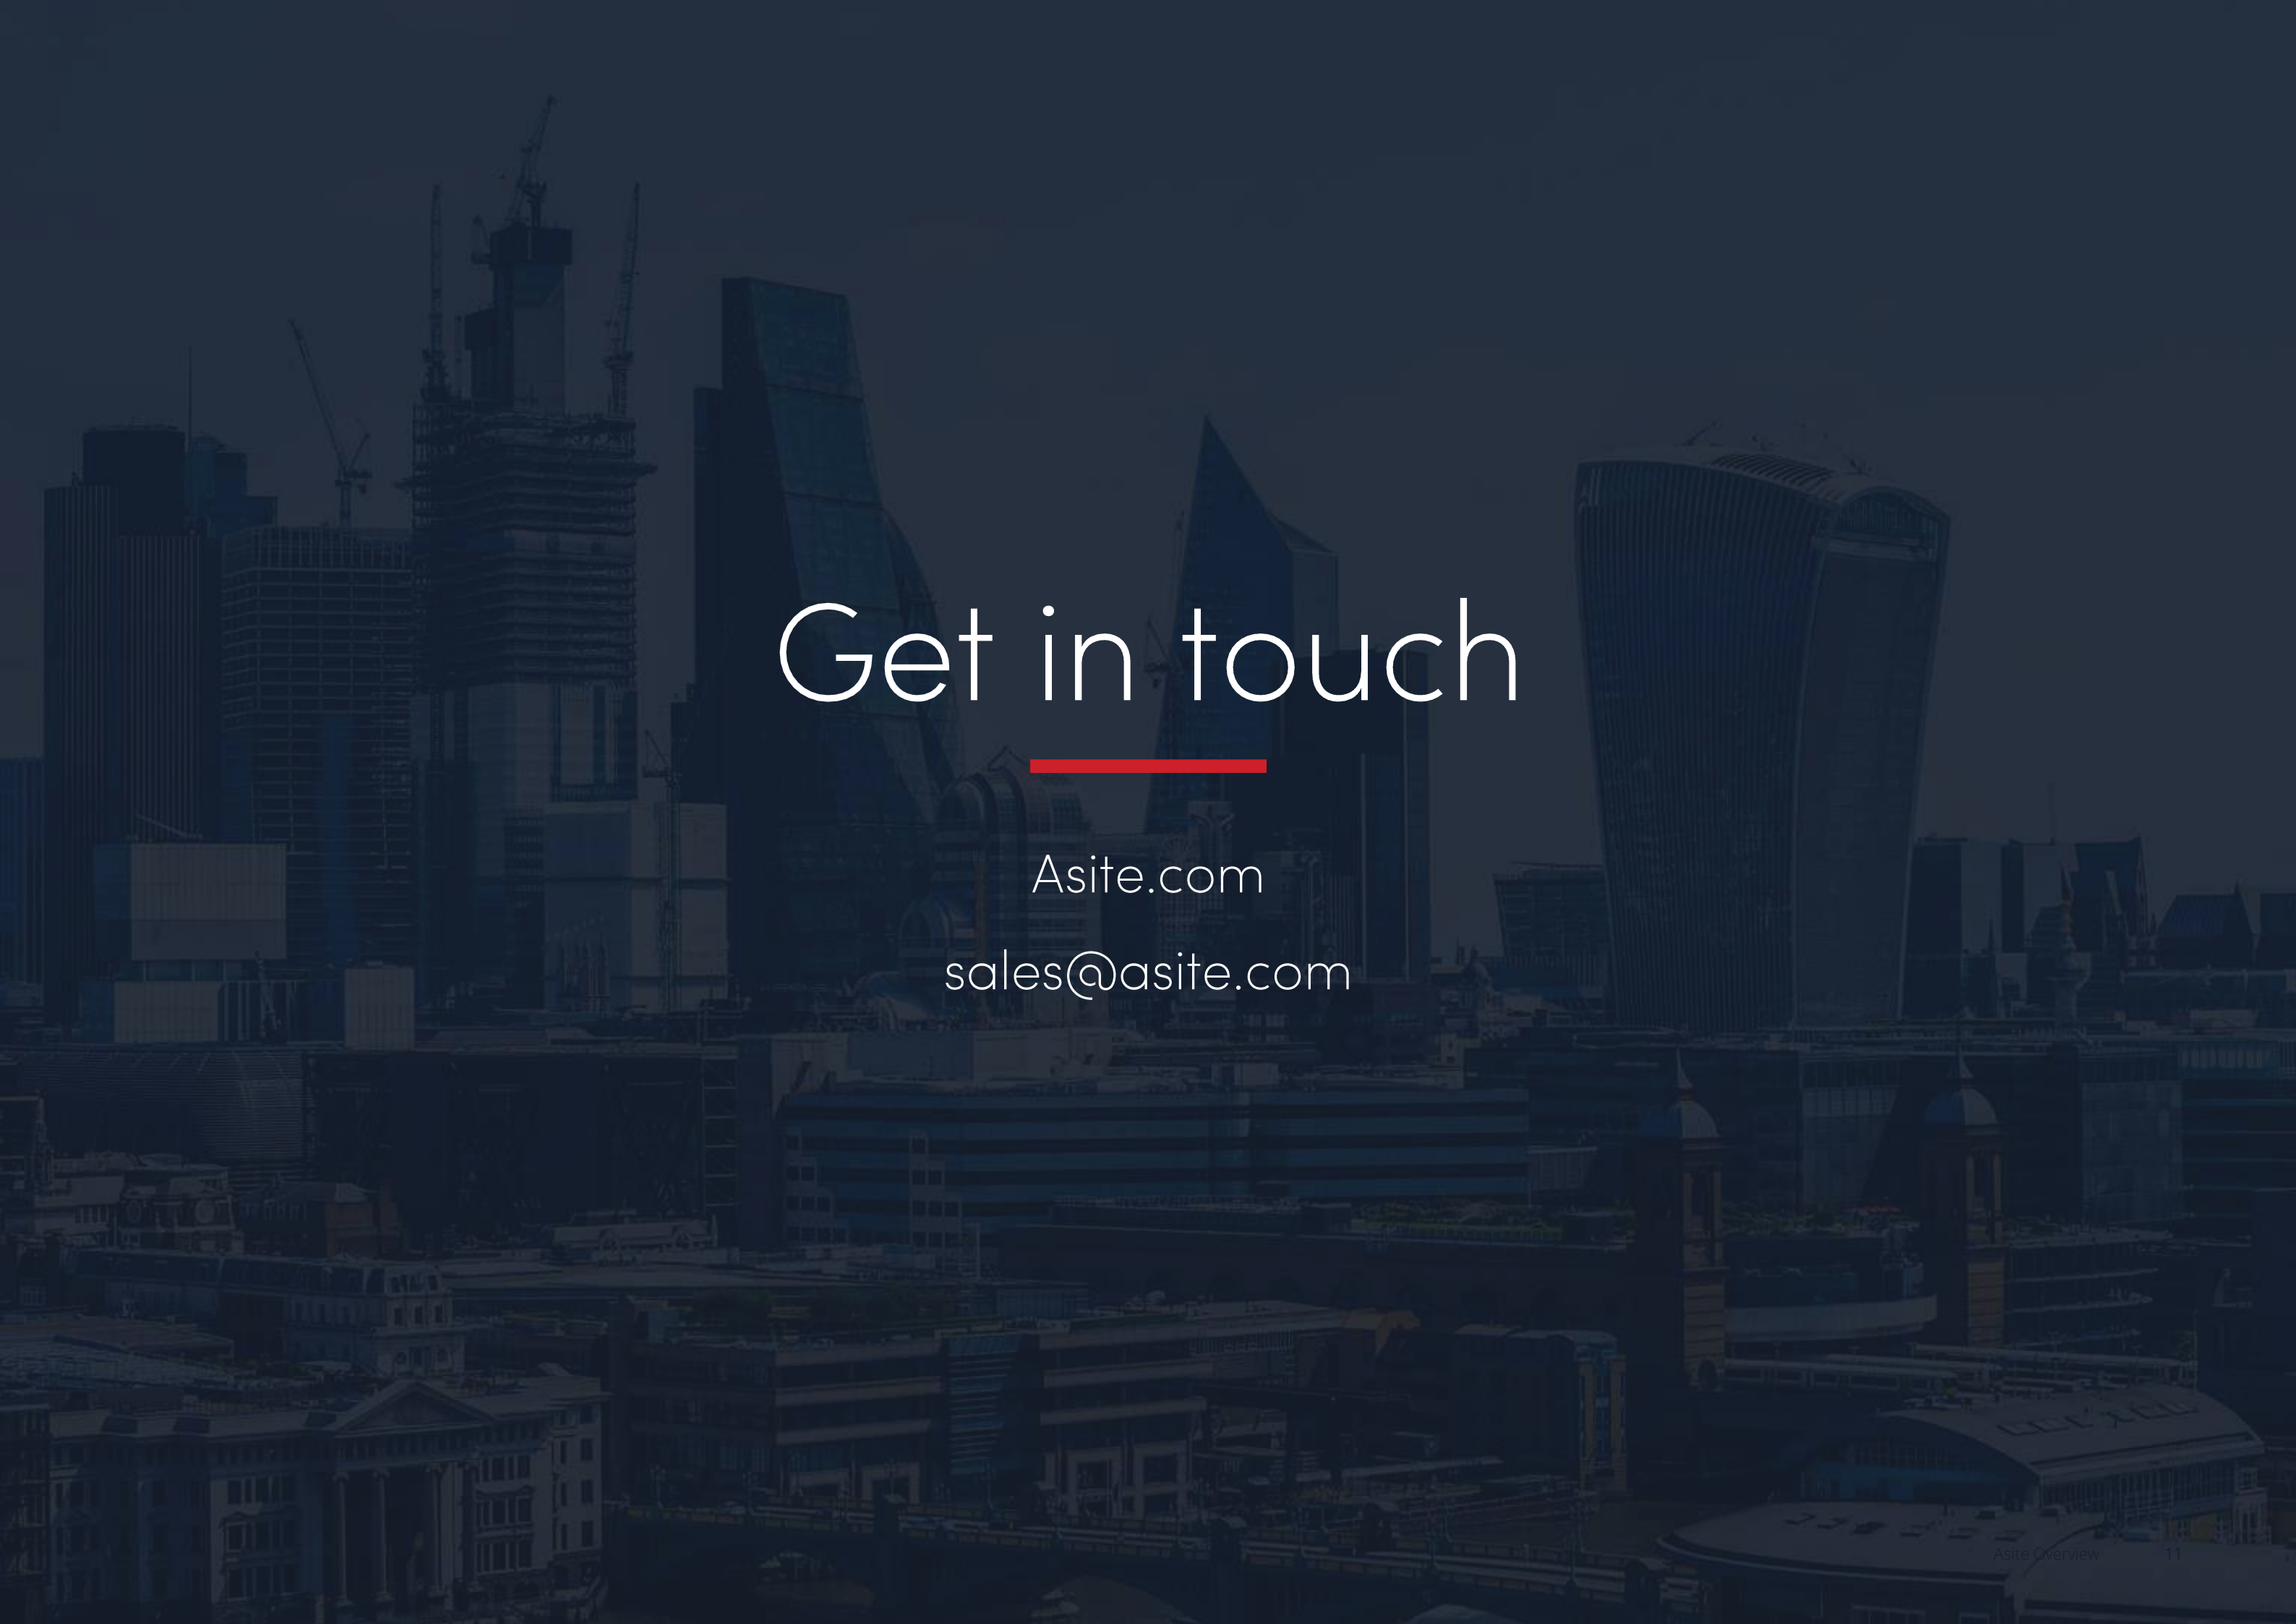

Partners – such as the BIM Alliance, Constructing Excellence, and BuildingSMART – have also been introduced into the Ecosystem to simplify processes, build knowledge hubs, and create connections between different organizations and regions.

The Asite Ecosystem works collaboratively with its partners to develop new technology, knowledge, or offer complementary solutions and services to reach new customers and transform the world of cloud collaboration. It aims to make the flow of project and capital asset data as easy as drag-and-drop for all its mutual customers.

The Asite Ecosystem is continuously growing with new partner organizations regularly coming on board. By working collaboratively with these partner organizations, the Asite team is playing an active role in the advancement of digital engineering for our built environment.
